## INTRODUCTION.

Fourteen years ago the author came to Quaker Hill as a resident, and has spent at least a part of each of the intervening years in interested study of the locality. For ten of those years the fascination of the social life peculiar to the place was upon him. Yet all the time, and increasingly of late, the disillusionment which affects every resident in communities of this sort was awakening questions and causing regrets. Why does not the place grow? Why do the residents leave? What is the illusive unity which holds all the residents of the place in affection, even in a sort of passion for the locality, yet robs them of full satisfaction in it, and drives the young and ambitious forth to live elsewhere?

The answer to these questions is not easily to be had. It is evident that on Quaker Hill life is closely organized, and that for eighteen decades a continuous vital principle has given character to the population. The author has attempted, by use of the analysis of the material, according to the "Inductive Sociology" of Professor Franklin H. Giddings, to study patiently in detail each factor which has played its part in the life of this community.

This book presents the result of that study, and the author acknowledges his indebtedness to Professor Giddings for the working analysis necessary to the knowledge of his problem, as well as for patient assistance and inspiring interest. The gradual unfolding of the conclusions, the logical unity of the whole, and the explanation of that which before was not clear, have all been the fruit of this patient field-work.

The study of human society is at the present time little more than a classifying of material. Only with great reserve should any student announce ultimate results, or generalize

upon the whole problem. For this period of classifying and analyzing the material, such study of limited populations as this should have value. The author makes no apology for the smallness of his field of study. Quaker Hill is not even a civil division. It is a fraction of a New York town. Therefore no statistical material of value is available. It is, moreover, not now an economic unit, though it still may be considered a sociological one. This study, therefore, must be of interest as an analysis of the working of purely social forces in a small population, in which the whole process may be observed, more closely than in the intricate and subtle evolution of a larger, more self-sufficient social aggregate.

The descriptive history of Quaker Hill, which it is my purpose in this book to write, comprises three periods; and the descriptive sociology records two differing yet related forms of social life, connected by a period of transition. This study will then be made up of three parts: First, the Quaker Community; second, the Transition; and third, the Mixed Community. The periods of time corresponding to these three are: The Period of the Quaker Community, 1730 to 1830; second, the Period of Transition, 1830 to 1880; and third, the Period of the Mixed Community, 1880 to 1905.

The Quaker Community, which ran its course in the one hundred years following the settlement of the Hill, presents the social history of a homogeneous population, assembled in response to common stimuli, obedient to one ideal, sharing an environment limited by nature, cultivating an isolation favored by the conditions of the time, intermarrying, and interlacing their relations of mutual dependence through a diversified industry; knowing no government so well as the intimate authority of their Monthly Meeting; and after a century suffering absorption in the commerce and thinking of the time through increased freedom of communication.

The Transition follows the Division of the Quaker Meeting in 1828, the building of turnpikes, and the coming of the railroad in 1849. A cultured daughter of Quaker Hill, whose life has extended through some of those years, has called them "the dark ages." It was the middle age of the community. The economic life of the place was undergoing change, under the penetrating influence of the railroad; the population was undergoing radical renovation, the ambitious sons of the old stock moving away, and their places being filled at the bottom of the social ladder by foreigners, and by immigration of residents and "summer boarders" of the "world's people." Above all, the powerful ideal of Quakerism was shattered. The community had lost the "make-believe" at which it had played for a century in perfect unity. With it went the moral and social authority of the Meeting. Two Meetings mutually contradicting could never express the ideal of Quakerism, that asserted the inspiration of all and every man with the one divine spirit. This schism, too, was not local, but the Monthly Meeting on the Hill was divided in the same year as the Yearly Meeting in New York, the Quarterly Meetings in the various sections, and the local Monthly Meetings throughout the United States.

The Period of the Mixed Community, from the building of Akin Hall and the Mizzen-Top Hotel in 1880 to the year 1905 has been studied personally by the present writer; and it is his belief that during this short period, especially from 1890 to 1900, the Hill enjoyed as perfect a communal life as in the Period of the Quaker Community. The same social influence was at work. An exceptionally strong principle of assimilation, to be studied in detail in this book, which made of the original population a century and a half earlier a perfect community, now made a mixed population of Quakers, Irish Catholics and New York City residents, into a community

unified, no less obedient to a modified ideal, having its leaders, its mode of association, its peculiar local integrity and a certain moral distinction.

This period appears at the time of this writing, in 1907, to be coming slowly to an end, owing to the death of many of the older members of the Quaker families, and the swift diminution—with their authority removed—of the Quaker influence, which was the chief factor in the community's power of assimilation.

If one may state in condensed form what this study discovers in Quaker Hill that is uncommon and exceptional, one would say that the social peculiarity of the Hill is: first, the consistent working out of an idea in a social population, with the resultant social organization, and communal integrity; and second, the power of this community to assimilate individuals and make them part of itself.

# PART I.

## The Quaker Community, from its Settlement in 1728, to the Division in 1828

### CHAPTER I.

#### THE SOURCES OF THIS HISTORY.

The sources of the history and descriptive sociology of Quaker hill are, first, the reminiscences of the older residents of the Hill, many of whom have died in the period under direct study in this paper; and second, the written records mentioned below. At no time was Quaker Hill a civil division, and the church records available were not kept with such accuracy as to give numerical results; so that statistical material is lacking.

The written sources are:

1. The records of Oblong Meeting of the Society of Friends until 1828; of the Hicksite Meeting until 1885, when it was "laid down"; and of the Orthodox Meeting until 1905, when it ceased to meet.\*

\* The oldest records of Oblong meeting are contained in the records of Purchase Meeting, the mother society, from the earliest date, about 1741, at which Oblong is mentioned, to 1744, when it became an independent monthly meeting. Most of the early settlers on the Oblong came through Purchase, married there and left their names on its pages. From the year 1744 Oblong Meeting was a meeting of record, but for thirteen years the minutes were written on loose sheets, which have been lost. They may indeed be in existence, for in 1760 the meeting directs Clerk Zebulon Ferriss to record the minutes for the time he has been clerk; and appoints two to record the previous minutes from the establishment of the meeting. If those two did as they were directed, there should be a book of the oldest records of the Hill in existence; and in any case there may be in some old leather bound trunk, leaves of records from 1744 to 1757, whose value is beyond calculation. The minutes of the Meeting from 1757 until the division, and from that date until the Hicksite Meeting was laid down in 1885, are in the

2. Records of Purchase Meeting of the Society of Friends for the period antedating 1770.
3. Ledgers of the Merrit general store of dates 1771, 1772, 1839.
4. Daybooks and ledgers of the Toffey store of dates 1815, 1824, 1833.
5. The "Quaker Hill Series" of Local History, publications of the Quaker Hill Conference. In particular Nos. II, III, IV, VII, VIII, IX, X, XI, XIII, XIV, XV, XVI and XVII.\*
6. Maps of Fredericksburgh and vicinity by Robert Erskine

possession of John Cox, Librarian of the Yearly Meeting (Hicksite). From 1828, the year of the division, until the present year, the minutes of the Orthodox Friends are in the possession of William H. Osborn. The minutes of the Women's Meeting previous to 1807 are missing; one volume, from 9th Mo., 14th, 1807, to 3rd Mo., 16th, 1835, is with John Cox. In the same place are three volumes of the record of Births, Marriages and Deaths: one from 1745 to 1774; then, after a gap, due to the absence of a volume, is the second, from 1786 to 1866; and a third volume of births and deaths alone from 1828 to 1893. Volumes lacking in this collection are the records of births and deaths previous to 1828: and of marriages from 1774 to 1786.

The records of the present Orthodox Meeting in full, as well as the following two volumes of the records of the Preparative Meeting of Ministers and Elders at Oblong, are in the possession of William H. Osborn on Quaker Hill; first from 10th month, 12th, 1783, to 1st month, 13th, 1878; and second from 1878 to present time. Last of all, the record of births and deaths of the meeting, from 1810 to the present day, following the line of the Orthodox society, is in the possession of the Post family on Quaker Hill.

## CHAPTER II.

### THE LOCALITY.

In the hill country, sixty-two miles north of New York, and twenty-eight miles east of the Hudson River at Fishkill, lies Quaker Hill. It is the eastern margin of the town of Pawling, and its eastern boundary is the state line of Connecticut. On the north and south it is bounded by the towns of Dover and Patterson respectively; on the west by a line which roughly corresponds to the western line of the Oblong, that territory which was for a century in dispute between the States of New York and Connecticut. Its length is the north and south dimension of Pawling.

This area is six and a half miles long, north and south, and irregularly two miles in width, east and west. Quaker Hill can scarcely be called a hamlet, because instead of a cluster of houses, it is a long road running from south to north by N.N.E. and intersected by four roads running from east to west. The households located on this road for one hundred and sixty years constituted a community of Quakers dwelling near their Meeting House; and until the building of the Harlem Railroad in the valley below in 1849, had their own stores and local industries.

Before the railroad came, Quaker Hill was obliged to go to Poughkeepsie for access to the world, over the precipitous sides of West Mountain, and all supplies had to be brought up from the river level to this height. At present Quaker Hill, in its nearest group of houses at the Mizzen-Top Hotel, is three miles and three-quarters from the railroad station at Pawling. Other houses are five and seven miles from Paw-

ling. On the east the nearest station of the New York, New Haven and Hartford Railroad, New Milford, is nine miles away. The "Central New England" Branch of the N. Y. N. H. & H., running east and west, is at West Patterson or West Pawling, seven and eight miles.

The natural obstacle which does more than miles to isolate Quaker Hill is its elevation. The "Mizzen-Top Hill," as it is now called, is a straightforward Quaker road, mounting the face of the Hill four hundred feet in a half-mile. The ancient settler on horseback laid it out; and the modern wayfarer in hotel stage, carriage or motor-car has to follow. Quaker Hill is conservative of change.

The mean elevation is about 1,100 feet above the sea. The highest point being Tip-Top, 1,310 feet, and the lowest point 620 feet. The Hill is characterized by its immediate and abrupt rise above surrounding localities, being<sup>v</sup> from 500 to 830 feet above the village of Pawling, in which the waters divide for the Hudson and Housatonic Rivers. On its highest hill rises the brook which becomes the Croton River. From almost the whole length of Quaker Hill road one looks off over intervening hills to the east for twenty-five miles, and to the west for forty miles to Minnewaska and Mohonk; and to the north fifty and sixty miles to the Catskill Mountains.

One's first impressions are of the green of the foliage and herbage. The grass is always fresh, and usually the great heaving fields are mellowed with orange tints and the masses of trees are of a lighter shade of green than elsewhere. The qualities of the soil which have made Quaker Hill "a grass country" for cattle make it a delight to the eye. Well watered always, when other sections may be in drought, its natural advantages take forms of beauty which delight the artist and satisfy the eye of the untrained observer.

The Hill is a conspicuous plateau, very narrow, extending north and south. It is "the place that is all length and no breadth." Six miles long upon the crest of the height runs the road which is its main thoroughfare, and was in its first century the chief avenue of travel. Crossing it at right angles are four roads, that now carry the wagon and carriage traffic to the valleys on either side; which since railroad days are the termini of all journeys. The elevation above the surrounding hills and valleys is such that one must always climb to attain the hill; and one moves upon its lofty ridge in constant sight of the distant conspicuous heights, the Connecticut uplands east of the Housatonic on one side, and on the other, the Shawangunk and Catskill Mountains, west of the Hudson, all of them more than 25 miles away.

Unsheltered as it is, the locality is subject to severe weather. The extreme of heat observed has been 105 degrees; and of cold—24 degrees.

Quaker Hill possesses natural advantages for agriculture only. No minerals of commercial value are there; although iron ore is found in Pawling and nearby towns. On the confines of the Hill, in Deuell Hollow, a shaft was driven into the hillside for forty feet, by some lonely prospector, and then abandoned; to be later on seized upon and made the traditional location of a gold mine. The Quaker Hill imagination is more fertile and varied than Quaker Hill land. No commercial advantages have ever fallen upon the place, except those resultant from cultivation of the fertile soil in the way of stores, now passed away; and the opportunity to keep summer boarders in the heated season.

Interest which attaches to Quaker Hill is of a three-fold sort: historical, scenic and climatic. The locality has a history of peculiarly dramatic interest. It is beautiful with a rare and satisfying dignity and loveliness of scene; and it is

the choice central spot of a region bathed in a salubrious atmosphere which has had much to do with its social character in the past, and is to-day very effective in making the place a summer settlement of New York people. The population is increased one hundred per cent. in the summer months, the increase being solely due to the healthful and refreshing nature of the place.

The history of the locality is associated with the quaint name, "The Oblong." This was the name of a strip of land, lying along the eastern boundary of New York State, now part of Westchester, Putnam and Dutchess Counties, and narrowing to the northward, which was for a century in dispute between New York and Connecticut.

There had been a half century in which this was all disputed land, between the Dutch at New York and the English in New England. Then followed a half century of dispute as to the boundary between sister colonies, which are now New York and Connecticut. As soon as this was settled in 1731 the immigration flowed in, and the history of Quaker Hill, the first settlement in the Oblong, begins. It was granted to New York; and in compensation the lands on which Stamford and Greenwich stand were granted to Connecticut after a long and bitter dispute. The end of the dispute and the first settlement of the Oblong came, for obvious reasons, in the same year. The first considerable settlement of pioneers was made at Quaker Hill in 1731, by Friends, who came from Harrison's Purchase, now a part of Rye.\*

The historical interest of the locality dwells in the contrast between the simple annals of Quakerism, which was prac-

\* Mr. James Wood, in his Bicentennial Address in 1895, thus described the Oblong:

The eastern side of the country had been settled by Presbyterians from Connecticut, and the western side along the Hudson River by the Dutch. The feeling between them was far from friendly. Their disputes had been very bitter, and Rye and Bedford had revolted from New York's jurisdiction. Their whipping-posts stood ready for the punishment of any from the river settlements who committed

ticed there in the eighteenth century, and the military traditions which have fallen to the lot of peaceful Quaker Hill. The "Old Meeting House," known for years officially as Oblong Meeting House, experienced in its past, full of memories of men of peace, the violent seizures by men of war. That storied scene, in the fall of 1778, when the Meeting House was seized for the uses of the army as a hospital,\* has lived in the thoughts of all who have known the place, and has been cherished by none more reverently than by the children of Quakers, whose peace the soldiers invaded. Both the soldier and the Quaker laid their bones in the dust of the Hill. Both had faith in liberty and equality. The history of Quaker Hill in the eighteenth century is the story of these two schools of idealists, who ignored each other, but were moved by the same passion, obeyed the same spirit. It is said that a locality never loses the impression made upon it by its earliest residents. Certain it is that the roots of modern things are to be traced in that earliest period, and through a continuous self-contained life until the present day.

In the eighteenth century Quaker Hill was the chosen asylum of men of peace. Yet it became the rallying place of periodic outbursts of the fighting spirit of that warlike age;

even slight offenses within their limits. As the two peoples naturally repelled each other they had left a strip of land, comparatively unoccupied, between them. This continued in nearly a north and south line, parallel with the river, and a little more than midway between it and the Connecticut and Massachusetts lines, as far as they extended. Into and through the strip of land the Quaker stream flowed, like a liquid injected into a fissure in the rocks. Each Quaker home as it settled became a resting place for those who followed, for it was a cardinal principle of Quaker hospitality to keep open house for all fellow members, under all circumstances.

\* "One First Day morning, in the mellow October days of that year, the worshipping stillness of the Friends' Meeting was broken by the tramp of horses, and the jangling of spurs, as a band of soldiers rode up, dismounted and entered the building. They remained quiet and reverent, till the handshaking of the elders closed the meeting; then the commanding officer rose, and in the name of the Continental Congress took possession of the building for a hospital for the troops, and as such it was used all that winter. After this meetings were held in the "great room" in the house of Paul Osborn, and were often frequented by soldiers stationed in the place, who listened attentively to the speaking, and left quietly at the close of the meeting."—Richard Osborn—a Reminiscence, by Margaret B. Monahan, Quaker Hill Local History Series, No. VIII.

and it was invaded during the great struggle for national independence by the camps of Washington.

There is a dignity common to Washington battling for liberty, and the Quaker pioneers serenely planning seven years before the Revolution for the freedom of the slave. But he was a Revolutionist, they were loyal to King George; he was a man of blood, brilliant in the garb of a warrior, and they were men of peace, dreaming only of the kingdom of God. He was fighting for a definite advance in liberty to be enjoyed at once; they were set on an enfranchisement that involved one hundred years; and a greater war at the end than his revolution. Their records contains no mention of his presence here, though his soldiers seized and fortified the Meeting House.\* His letters never mention the Quakers, neither their picturesque abode, their dreams of freedom for the slave, nor their Tory loyalty.

Each cherished his ideal and staked his life and ease and happiness upon it. Each, after the fashion of a narrow age, ignored the other's adherence to that ideal. To us they are sublime figures in bold contrast crossing that far-off stage: Washington, booted, with belted sword, spurring his horse up the western slope of the Hill, to review the soldiers of the Revolution in 1778; and Paul Osborn, Joseph Irish and Abner Hoag, plain men, unarmed save with faith, riding their plough horses down the eastern slope in 1775, to plead for the freedom of the slave at the Yearly Meeting at Flushing.

What effect the beauty of the place had upon the pioneer settlers it is, of course, impossible to say, for they have left no record of their appreciation of its beauty. Probably their interest in the picturesque was the same as that of a Quaker elder, of fine and choice culture after the Quaker standards, who said to the author, with a quiet laugh: "People all say

\* In the garret of the Meeting House rifle-ports, cut through the original planks, were discovered by the present writer.

that the views from my house are very beautiful, and I suppose they are; but I have lived here all my life, and I have never seen it." A Quakeress confessed to the same indifference to the beauty of the Hill, until she had resided for a time in another state, and had mingled with those who had a lively sense of beauty of scene; returning thereafter to the Hill, it appeared beautiful to her ever afterward.

The land has been for several generations under a high state of cultivation. The keeping of many cattle has enriched the broad pastures; and the dairy industry has been carried on with constant fertilizing of the lands; so that the great fields, heaping up one upon another, high above the valley, and plunging down in steep slopes so suddenly that the falling land is lost from view and the valley below seems to hang unattached, are covered with a brilliancy of coloring and a variety of those rich tints of green and orange which spell to the eye abundance, and arouse a keen delight, like that of possessing and enjoying.

There is also a large dignity in the outlines of every scene, which constantly expands the sensations and gives, on every hand, a sense of exhilaration and a pleasurable excitement to the emotions, which seems in experience to have something to do with the industry and application characteristic of Quaker Hill.

With this the atmosphere has had much to do, no doubt, being dry and soft. The first sensation of one alighting from a train in the town is one of lightness and exhilaration. This sensation continues through the first hours of one's stay on the Hill.\* After the first day of exhilaration come a day or more of drowsiness, with nights of profound sleep. In some persons a heightened nervousness is experienced, but in most cases the Hill has the effect upon those who reside there of a steady nervous arousal, a pleasure in activity, and a keen interest in life and work.

Whether the early settlers, in selecting the highest ground in this region, had a sense of this excellence of the climatic effect we do not know; but their descendants believe that such was their reason for settling the highest arable land on the Hill before the valleys or the lower slopes were cleared.

It is the common tradition that they settled on the Hill first, and on its highest parts, in order to avoid the malaria of the lowlands; as well as because they thought the hill lands to be more fertile.

The excellence of the climate is witnessed in the long lives of its residents. There were living in 1903, in a population of four hundred, five persons, each of whom was at least ninety years of age; and fifteen, each of whom was more than seventy-five years of age.

\* "Bodily functions are facilitated by atmospheric conditions which make evaporation from the skin and lungs rapid. That weak persons whose variations of health furnish good tests, are worse when the air is surcharged with water, and better when the weather is fine; and that commonly such persons are enervated by residence in moist localities but invigorated by residence in dry ones, are facts generally recognized. And this relation of cause and effect, manifest in individuals, doubtless holds in races."—Herbert Spencer, *Principles of Sociology*, Vol I, p. 21.

## CHAPTER III.

### THE ASSEMBLING OF THE QUAKERS.

The social mind of the Quaker Hill population was formed, at the settlement of the place, in a common response to common stimuli. The population was congregated from Long Island and Massachusetts settlements, by the tidings of the opening of this fertile land of the Oblong for settlement in 1731. I infer from the fact that settlements were previously made on both sides, at Fredericksburgh on one side, and at New Milford on the other,—at New Milford there was a Quaker Meeting established in 1729, fifteen years before Quaker Hill—that the value of the lands in the Oblong was well advertised. From the fact noted by James Wood (*The Purchase Meeting*, p. 10) that “the first settlement in any considerable numbers was upon Quaker Hill in the Oblong,” I infer that the uncommon promise of this hill land had been made known to the Quakers then assembling at this “Purchase in the Rye Woods,” and that Quaker Hill was settled in response to the stimulus of valuable, fertile lands offered for occupation and ownership.

It seems to have been the desire of the first settlers to form a community where they could live apart, maintain their form of religion and possess land fertile and rich. The Quakers are always shrewd as to economic affairs, and the business motive is never lost sight of in the spiritual inner light. In choosing Quaker Hill soil they selected ground which after one hundred and sixty-seven years is the richest in the region, sustains the best dairies, and is able longer than any other in the neighbor-

 (From Robert Erskine's Map, 1778-1780, in De Witt Clinton Collection,  
 New York Historical Society.)

hood in time of drought to afford abundant green grass and verdure.

To this place thus secluded, came Benjamin Ferriss in 1728, and Nathan Birdsall. They settled upon the sites marked 31 and 39; which are 1,200 and 1,100 feet above the sea, and very near the highest ground for many miles. There was at this time, 1729, a meeting of Friends at New Milford, nine miles away; but these two men came from Purchase Meeting in the town of Rye, forty miles directly to the South. There soon followed others, bearing the names, Irish, Wing, Briggs, Toffey, Akin, Taber, Russell, Osborn, Merritt, Dakin, Hoag. In ten years the tide of settlement was flowing full. In forty years the little community was filled with as many as could profitably find a living.

Complete records of the sources of this immigration are not available. John Cox, Jr., Librarian of the Yearly Meeting of Friends, says "the records do not show in any direct way where the members came from. A few came from Long Island meetings by way of Purchase, but most of them from the East, and I believe from Massachusetts. Indirectly the records show that the members occasionally went on visits into New England, and took certificates of clearance there (to marry)." Dartmouth, Mass., a town between Fall River and New Bedford, was the original home of so many of them that it easily leads all localities as a source of Quaker Hill ancestry. The Akin, Taber, Briggs families came from Dartmouth, which was in a region of both temporary and permanent Quaker settlement. Quaker Hill, R. I., is within fifteen miles of Dartmouth. The residents of Quaker Hill, New York, preserve traditions of the returns of the early Friends "to Rhode Island." There is a Briggs family tradition of the first pair of boots owned on the Hill, which were borrowed in turn by every man who made a visit to the ancestral home at Dartmouth.

It is probable also that some of the original residents came from Long Island, though from what localities I do not know. The minutes of Purchase Meeting at Rye, through which meeting most of the Quaker Hill settlers came, indicate in only a limited number of cases that the immigrant came from a farther point; and leave the impression that the Friend so commended to the Oblong was already a resident of "the Purchase," or of its related meetings at Flushing on Long Island. An example is the case of William Russell and his wife, notable pioneers, the earliest residents of Site 25, whose letter from Purchase Meeting in 1741 indicates only that they came to Oblong from Purchase.

The settlement of the Hill continued from the early years, 1728-1731, at which it began, until 1770, when the community may be said to have been complete. The land was supporting by that time all it would bear. Since that time the number of houses on the Hill has remained about the same, as will be seen from a comparison of the Maps 1 and 2, the one made for Washington in 1778-80 and the other being a tracing of the map of the Topographical Survey of the United States Government of recent date.

The extent of this population resident upon the Hill is shown in the lists of persons whose names appear in Appendix A, which is a census of the heads of families in the Meeting in the year 1761; added to which is a list of names which appear in the minutes of the Meeting in years immediately following. These lists show the growth of the population under study, in the years from 1761 to 1780, for there are whole families omitted from the list of 1761, who are named in the minutes in succeeding years. An instance is that of Paul and Isaac Osborn, who came from Rhode Island in 1760.\*

\* Richard Osborn—A Reminiscence, by Margaret B. Monahan, Quaker Hill Local History Series, No. VIII, p. 10.

As this list of members of the meeting shows the actual size of the population resident upon the Hill in 1761, the other list published in Appendix B, containing the names of those who traded at the Merritt store in 1771, exhibits, with startling vividness, the importance of Quaker Hill at that time. Little as the place is now, and geographically remote and hard of access always, it was evidently in the years named a center of a far-reaching country trade. This list is published in full, exactly as the names appear on Daniel Merritt's ledger, to convey this impression; and by contrast, the impression of the shrinkage in the years since the railway changed the currents of trade. It is published also as a basis of this study, being a numerical description, in the rough, of the problem we are studying. And a third use which such a list may serve is that of information to those interested in genealogy. It is a veritable mine of information, suggestion, and even color, of the life of that time—as indeed are the ancient ledgers, bound in calf, and kept with exquisite care, by this colonial merchant. In these old records are suggested, though not described, the lives of a hard-working, prosperous population, filling the countryside, laying the foundations of fortunes which are to-day enriching descendants. It was a community without an idler, with trades and occupations so many as to be independent of other communities, hopeful, abounding in credit, laying plans for generations to come, and living bountifully, heartily from day to day.

Every item in these mercantile records is of interest and full of suggestion, from the names of the negro slaves, who had accounts on the books, to the products brought for sale by one customer after another, by which they liquidated their accounts; from the "quart of rum" bought by so many with every "trading," to the Greek Testament and Latin Grammar bought by solid Thomas Taber, who wrote his name in real estate by his thrift and force, if he did not write it in dead languages.

## CHAPTER IV.

### ECONOMIC ACTIVITIES OF THE QUAKER COMMUNITY.

The economic activity of the early Quaker community was varied. All they consumed they had to produce and manufacture. Though the stores sold cane sugar, the farmers made of maple sap in the spring both sugar and syrup, and in the fall they boiled down the juice of sweet apples to a syrup, which served for "sweetness" in the ordinary needs of the kitchen.

Every man was in some degree a farmer, in that each household cultivated the soil. On every farm all wants had to be supplied from local resources, so that mixed farming was the rule. The land which its modern owners think unsuited to anything but grass, because it is such "heavy, clay soil," was made in the 18th century to bear, in addition to the grass for cattle and sheep, wheat, rye, oats and corn, flax, potatoes, apples. Of whatever the farmer was to use he must produce the raw material from the soil, and the manufacture of it must be within the community.

Two lists which come to us from early days cast light on the population and occupations of the early period. One is the sheriff's list of landowners in Dutchess County in 1740, on which is no name of any farmer then resident on Quaker Hill. The other list is that of those who claimed exemption from military duty in 1755; 38 are from Oblong and 21 from Beekman, many of them being Quakers resident on the Oblong. This list is as follows:

Joshua Shearman, Beekman Prec'nt, shoemaker; Moses Shearman, Beekman Prec'nt, laborer; Daniel Shearman, Beekman Prec'nt, laborer; Joseph Doty, Beekman Prec'nt, black-

smith; John Wing, Beekman Prec'nt, farmer; Zebulon Ferris (Oblong), Beekman Prec'nt, farmer; Joseph Smith, son of Rich'd, Beekman Prec'nt, laborer; Robert Whiteley, Beekman Prec'nt, farmer; Elijah Doty, Oblong House, carpenter; Philip Allen, Oblong, weaver; Richard Smith, Oblong, farmer; James Aiken, Oblong, blacksmith; Abrah'm Chase, son of Henry, Oblong, farmer; David Hoeg, Oblong, —; John Hoeg, Oblong, farmer; Jonathan Hoeg, Oblong, blacksmith; Amos Hoeg, son of John, Oblong, laborer; William Hoeg, son of David, Oblong, farmer; John Hoeg, son of John, Oblong, farmer; Ezekiel Hoeg, Oblong, laborer; Judah Smith, Oblong, tailor; Matthew Wing, Oblong, —; Timothy Dakin, Oblong, farmer; Jonathan Dakin, Oblong, laborer; Samuel Russell, Oblong, laborer; John Fish, Oblong, farmer; Reed Ferris, Oblong, shoemaker; Benjamin Ferris, Junr., Oblong, laborer; Joseph Akin, Oblong, blacksmith; Israel Howland, Oblong, farmer; Elisha Akin, Oblong, farmer; Isaac Haviland, Oblong, blacksmith; Nathan Soule, son of George, Oblong, farmer; James Birdsall, Oblong, laborer; Daniel Chase, Oblong, farmer; Silas Mossher, Oswego in Beekman Prec't, farmer; William Mosher, Oswego in Beekman Prec't, farmer; Silvester Richmond, Oswego in Beekman Prec't, farmer; Jesse Irish, Oswego in Beekman Prec't, farmer; David Irish, Oswego in Beekman Prec't, farmer; William Irish, Oswego in Beekman Prec't, farmer; Josiah Bull, Oswego in Beekman Prec't, farmer; Josiah Bull, Junr., Oswego in Beekman Prec't, farmer; Allen Moore, Oswego in Beekman Prec't, farmer; Andrew Moore, Oswego in Beekman Prec't, farmer; William Gifford, Oswego in Beekman Prec't, farmer; Nathaniel Yeomans, Oswego in Beekman Prec't, farmer; Eliab Yeomans, Oswego in Beekman Prec't, farmer; William Parks, Oswego in Beekman Prec't, farmer.

. This list mentions six occupations: the farmer, blacksmith, tailor, shoemaker, carpenter and laborer. With these six a

frontier community could live, for every man of them was a potential butcher, tanner, trader. There is record of others in later years, when the communal life had become differentiated. There were at various times in the Quaker century stores at four places on the Hill. The Merritt store, at Site 28, descended to the sons of Daniel Merritt, and finally to James Craft. There was a store in Deuell Hollow, kept by Benjamin and Silas Deuell for several years. There is extant one bill of merchandise purchased by them of Edward and William Laight, merchants of New York, the amount being £200 and the date Feb. 25, 1785. The Akin stores at Sites 47 and 46, were kept by Daniel and Albro Akin, and the store at Site 53, by John Toffey. These stores during the period of the Quaker community were in trade largely by barter, taking all the commodities the farmer had beyond his immediate use, and selling sugar, coffee, cloth and other commodities which after 1815, as will be shown later, rapidly increased in number and in quantity. The use of money increased at the same period. The phrase still lingers in Quaker Hill speech: "I am going to the store to do some trading," though the milk farmer has engaged in no barter for fifty years.

In the culminating period of the Quaker Community, which followed the Revolutionary War, the following were some of the occupations practiced on the Hill, the record or remembrance of which is preserved:\*

Abram Thomas was a blacksmith, at Site 14,† and is said to have made the nails used in building the Meeting House. George Kirby, at Site 99½, had a blacksmith shop; there was another at Site x100, now abandoned on Burch Hill, kept by Joel Winter Church, where Washington's charger was shod, and the bill was paid at the close of the war.

But the most notable smithy was at Site 41, where now

\* See "Some Glimpses of the Past," by Alicia Hopkins Taber, 1906; Quaker Hill Series.

† See Map 2.

stands one of the oldest houses on the Hill. Here Davis Marsh wrought in iron, and the sound of his trip-hammer audible for miles smote its own remembered impression upon the ears of those ancient generations. Doubtless the favored location of Marsh's shop in the neighborhood most central, as is shown in Chapter III, Part III, gave it greater use. There was at one time a forge in the Glen at Site 66, to which magnetic ore was hauled from Brewster to be worked.

A "smith shop" is also noted on Erskine's map for Washington in 1778 at Site XIII. The most important manufacturing business of the community, however, was the wagon-worker's shop at Site 45, kept by Hiram Sherman. Under the general title of wagon maker he manufactured all movables in wood and iron, from fancy wagons to coffins.

Other trades were of increasing variety as the century of isolation proceeded. Shoemakers went from house to house to make shoes for the family, of the leather from the backs of the farmer's own cattle, tanned on the farm or not far away. Reed Ferris was a shoemaker, in whose residence at Site 99 Washington was entertained in September, 1778, until he took up Headquarters at John Kane's. Stephen Riggs was a shoemaker. Three tanneries were maintained on the Hill in the bloom of the Quaker community by Ransom Aldrich about Site 13; Amos Asborn, at Site x21, who also made pottery there; and Isaac Ingersoll, at Site 134.

Albro Akin had a sawmill in the Glen, and a gristmill was also located there in an early period. William Taber had a gristmill and also a cloth mill, consisting of carding machine, fulling mill, and apparatus for pressing, coloring and dressing cloth. John Toffey, at Site 53, and Joseph Seeley, at Site 15, and some of the Arnolds, near Site 12, were hatters. Jephtha Sabin, at Site 74, and Joseph Hungerford were saddlers and harnessmakers.

Every farmer and indeed every householder raised hogs. Pork was salted, as it is to-day, for winter use, in barrels of brine. Hogs also were extensively raised and butchered for market, at a year and a half old, the meat being taken to Poughkeepsie by wagon, and thence to New York. Many who raised more pork than their own use demanded exchanged it at the stores. Fields of peas were raised to feed the hogs.

Sheep also were raised for their wool; their meat afforded an acceptable variety in farmer's fare and their hides had many uses. David Irish, Daniel and David Merritt, Jonathan A. Taber and George P. Taber were farmers whose product of wool was notably fine and abundant. Jonathan Akin Taber "kept about eleven hundred sheep, some merino and some saxony."

Butter and cheese making were an important part of the business and income of the farmer's family, the butter being packed and sent weekly to the Hudson River boats for New York markets, or to Bridgeport or New Haven—a two-days' journey in either case. The cheese was ripened, or cured, being rubbed and turned every day, and kept until the dealers came around to inspect and purchase. On every farm was kept a flock of geese, which were picked once in six weeks to keep up the supply of feather beds and to furnish the requisite number for the outfit of each daughter of the family.

In the year 1767, Oblong Meeting took action which resulted, after seven years of agitation, in the clear declaration by the Yearly Meeting of New York, earliest of such acts, in favor of the freeing of slaves. This was one hundred years before the Emancipation Proclamation.

Wilson's "Rise and Fall of the Slave Power in America" says that "Members of the Society of Friends took the lead in the opposition to slavery." There had been action taken in

1688 by a small body of Germantown Quakers, in the form of a petition to their Yearly Meeting against "buying, selling and holding men in slavery." But to this the Yearly Meeting, after eight years of delay, replied only that "the members should discourage the introduction of slavery, and be careful of the moral and intellectual training of such as they held in servitude."

Meantime the Quaker Meetings on Long Island, in New York and Philadelphia took action recognizing slavery, with only a gradual tendency to regard the institution of slavery with disfavor. Now the time had come for putting the denomination in array against the institution.

There was a preacher of the Quakers who traveled much from 1746 to 1767 through the colonies, proclaiming that "the practice of continuing slavery is not right;" and that liberty is the natural right equally of all men." In the last year of his propaganda occurred the event notable in local history. This was thirteen years before the action of the State of Pennsylvania, which initiated the lawmaking for emancipation among the northern colonies. It was "twenty years before Wilberforce took the first step in England against the slave-trade." The record of this action is as follows:

"At a (Yearly) Meeting at the Meeting House at Flushing the 30th day of the 5th month, 1767, a Querie from the Quarterly Meeting of the Oblong in Relation to buying and Selling Negroes was Read in this meeting and it was concluded to be left for consideration on the minds of friends until the Next Yearly Meeting. The Query is as follows: If is not consistant with Christianity to buy and Sell our Fellowmen for Slaves during their Lives, & their Posterities after them, then whether it is consistant with a Christian Spirit to keep those in Slavery that we have already in possession by Purchase, Gift or any otherways."

The year after, not without due hesitation, a committee was appointed which "drew an Essay on that subject which was read and approved and is as follows: We are of the mind that it is not convenient (considering the circumstances of things amongst us) to give an Answer to this Querie, at least at this time, as the answering of it in direct terms manifestly tends to cause divisions and may Introduce heart burnings and Strife amongst us, which ought to be Avoided, and Charity exercised, and persuasive methods pursued and that which makes for peace. We are however fully of the mind that Negroes as Rational Creatures are by nature born free, and where the way opens liberty ought to be extended to them, and they not held in Bondage for Self ends. But to turn them out at large Indiscriminately—which seems to be the tendency of the Querie, will, we Apprehend, be attended with great Inconveniency, as some are too young and some too old to obtain a livelyhood for themselves."

Here, then, is the first action in a legislative body in New York State, upon the freeing of slaves. The "Querie from Oblong" had secured a clear deliverance in favor of the essential right of the negro as a man, in favor of his being freed "where the way opened," and against the holding of man for the service of another. The only hesitation of the meeting was frankly stated; emancipation was not to be pushed to the point of division among Christians, and was not to be accomplished to the impoverishment of the negro.

Yet if this action seems to any one like "trimming," it was followed by other deliverances increasingly clear and emphatic. Three years later Friends were forbidden to sell their slaves, except under conditions controlled by the Meeting. Throughout the communities of Friends the agitation was being carried on, and the meetings were anxious to purge themselves of the evil.

Finally in 1775 came the clear utterance of the Yearly

Meeting in favor of emancipation without conditions: "it being our solid judgment that all in profession with us who hold Negroes ought to restore to them their natural right to liberty as soon as they arrive at a suitable age for freedom." At this meeting the Oblong was represented by Joseph Irish, Abner Hoag and Paul Osborn.

It only remains to picture the rest of the process by which slavery was purged away on Quaker Hill. In 1775 the practice of buying and selling slaves had come to an end, and no public abuse was noted by the Meeting in the treatment accorded to slaves by their masters. The next year there was but one slave owned by a member of the Meeting; and the day he was freed in the fall of 1777 was counted by the Meeting so notable that the clerk was directed to make a minute of the event. The owner had been Samuel Field, and the slave was called Philips. Another manumission in 1779 is recorded, but it was doubtless in the case of a new resident of the Hill, for it is recorded without signs of the joy exhibited in the freedom of Philips.

In the years 1782-3 the final act in emancipating the local slaves was taken, in the investigation by a committee of the Meeting into the condition of the freed slaves, and the obligations of their old masters to them. It was not very cordially received at first, but in the third year of the life and labors of the committee it was reported by them that "the negroes appear to be satisfied without further settlement." So the first American community to free herself from slavery required but sixteen years of agitation fully to complete the process.

## CHAPTER V.

### AMUSEMENTS IN THE QUAKER COMMUNITY.

The Quaker community had little time for amusements, and less patience. The discipline of the Meeting levelled its guns at the play spirit, and for a century men were threatened, visited, disowned if necessary, for "going to frolicks," and "going to places of amusement." The Meeting House records leave no room for doubt as to the opinion held by the Society of Friends upon the matter of play.

An account is given elsewhere of the discipline of the Meeting in its struggle against immorality and "frollicking." The following quotation from James Woods' "The Purchase Meeting," vividly depicts the confused elements of the social life of that time: "On great occasions such as the holding of a Quarterly Meeting, the population turned out *en masse*. Piety and worldliness both observed the day. The latter class gathered about the meeting house, had wrestling matches and various athletic sports in the neighboring fields, and horse races on the adjacent roads. The meetings regularly appointed committees as a police force to keep order about the meeting house during the time of worship and business."

The stories told by old Quaker Hill residents of the gatherings about the meeting house, even on First Day, or Sunday, confirm the above quotation. The field opposite the meeting house, for years after 1769, when the earliest meeting house was moved away from that site, was used as a burial ground, and later, no headstones being placed in those early days, as a space for tethering horses. An old resident tells me that crowds of men were always about the meeting house before and after meeting, and even during meeting, and that in

later years the resident of Site No. 32, who owned valuable horses, used to exhibit a blooded stallion on a tether, leading him up and down to the admiration of the horse-owners present, and to their probable interest.

These conditions seem to have continued through that whole century. The play spirit had no permitted or authorized occasions. It had to exercise itself with the other instincts, in the common gatherings. It was, as far as we can see, a time of asceticism. Men were forbidden rather than invited, in those days.

The Meeting not only provided no play opportunities, but it forbade the attendance of its members upon the "frollicks," which then were held, as nowadays they are held, in the country side. A gathering with plenty to eat, and in those days a free indulgence in drink on the part of the men, with music of the fiddler, and dancing, this was a "frollick"—that horror of the meeting house elders. Indeed, it was of incidental moral detriment; for it was outlawed amusement, and being under the ban, was controlled by men beyond the influence or control of the meeting. The young people of the Quaker families, and sometimes their elders, yielded to the fascinations of these gatherings. The unwonted excitement of meeting, the sound of music, playing upon the capacity for motor reactions in a people living and laboring outdoors, inflamed beyond control by rum and hard cider, soon led to lively, impulsive activities and physical exertions, both in immoderate excess and in disregard of all the inhibitions of tradition and of conscience. That there was a close relation of these "frollicks" with the sexual immorality of the period is probable.

Of more concern to us here is the observation, which is made with caution, that the attitude of the community to amusements was not conducive to moral betterment, because amusement was not specialized. The repression of the play

spirit, offering it no occasions, recognizing no times and places as appropriate for it, disturbed the equilibrium of life, forced the normal animal spirits of the population to impulsive and explosive expressions and deprived them of the regulative control of the community.

It is probable that that early period had modes of amusement the record of which is wholly lost. There are few sources existing to inform us of the amusements of laboring classes. Hints occur in such records as that of the sale of powder and shot, of fishhooks and a quart of rum, at the Merritt store, in 1771, to the Vaughns. Seven years later the Vaughns were the Tory "cowboys," who robbed the defenceless neighborhood, until their leader was killed by Captain Pearce, during the Revolution.

It is probable that then the community wore the aspect which now it wears, of industry without play; and that members went elsewhere for their amusement, the acknowledged leaders in which were resident in other neighborhoods and communities.

The recreation of the body of working population of the Hill was incidental to the religious assemblies. In these meetings they took an intense and a very human pleasure. Their solitary, outdoor labor was performed in an intense atmosphere of communal interaction. He who raised hogs was to sell them, not to a distant market, but to Daniel Merritt, or John Toffey, the storekeepers. He who made shoes went from house to house, full of news, always talking, always hearing. He who wove heard not his creaking loom, but the voice of the storekeeper or of the neighbor to whom he would sell. The cheeses a woman pressed and wiped in a morning were to be sold, not far away to persons unseen, but to neighbors known, whose tastes were nicely ascertained and regarded.

The result was that meetings on First Day and Fourth Day were times of intense pleasure, occasions of all-around

interest: not mere business interest, but incidentally a large satisfaction of the play instinct, especially for the working and mature persons. The young, too, had their happiness and enjoyment of one another in a multitude of ways, in addition to those boisterous games described above by Mr. James Wood. Their intense friendships and lively enterprises were probably not so easy to confine to the bounds of sober, staid meetings, but no less did their merry good spirits fill those assemblies. The galleries of the old Meeting House were built in 1800 for the young, who were expected to sit there during meeting. The wooden curtains between the "men's part" and the "women's part" are especially thorough in their exclusion of even an eyeshot from one side to the other.

## CHAPTER VI.

### THE IDEALS OF THE QUAKERS.

In the Introduction to Professor Carver's "Sociology and Social Progress" is a passage of great significance to one who would understand Quaker Hill, or indeed any community, especially if it be religiously organized. The writer refers to: "a most important psychic factor, namely the power of idealization. This may be defined, not very accurately, as the power of *making believe*, a factor which sociologists have scarcely appreciated as yet. We have such popular expressions as "making a virtue of necessity," which indicates that there is a certain popular appreciation of the real significance of this power, but we have very little in the way of a scientific appreciation of it.

∴ "One of the greatest resources of the human mind is its ability to persuade itself that what is necessary is noble or dignified or honorable or pleasant. For example, the greater part of the human race has been found to live under conditions of almost incessant warfare. War being a necessity from which there was no escape, it was a great advantage to be able to glorify it, to persuade ourselves that it was a noble calling—in other words, a good in itself.

"Another example is found in the case of work. Work is a necessity as imperious as war ever was. Looked at frankly and truthfully, work is a disagreeable necessity and not a good in itself. Yet by persuading ourselves that work is a blessing, that it is dignified and honorable, our willingness to work is materially increased, and therefore the process of adaptation is facilitated—in other words, progress is accelerated. Among the most effective agencies for the promotion of progress,

therefore, must be included those which stimulate this power of idealization. In short, he who in any age helps to idealize those factors and forces upon which the progress of his age depends, is perhaps the most useful man, the most powerful agent in the promotion of human well-being, even though from the strictly realistic point of view he only succeeds in making things appear other than they really are. From the sociologist's point of view this is the mission of art and preaching of all kinds."

The quotation from Professor Carver bears the impression of incompleteness, or rather of suggestiveness. If "making a virtue of necessity" is idealization, is not symbolism also a form of "make believe." If the "ability to persuade oneself that what is necessary is noble or dignified or honorable or pleasant," is exhibited on Quaker Hill as a "most important psychic factor," so is also the idealization of the commonplace the "making believe" that peace and plainness, that simple, old-fashioned dress, and seventeenth century forms of speech are spiritual and are serviceable to the believing mind. The power of idealization is nowhere exhibited as a social force more clearly than in a Quaker community. Professor Carver's word, "make believe," is most accurate. Quakers act with all sincerity the drama of life, using costume and artificial speech, and attaching to all conduct peculiar mannerisms; casting over all action a special veil of complacent serenity; all which are parts in their realization of the ideal of life. Their fundamental principle is that the divine spirit dwells and acts in the heart of every man; not in a chosen few, not in the elect only, but in all hearts. Quaker Hill to this day acts this out, in that every person in the community is known, thought upon, reckoned and estimated by every other. Towns on either side have a neglected population area, but Quaker Hill has none. Pawling in its other neighborhoods has forgotten roads, despised cabins, in which dwell persons for whom nobody cares,

drunkards, ill-doers, whom others forget and ignore. Quaker Hill ignores no one. There are, indeed, rich and poor, but the former employ the latter, know their state, enjoy their peculiarities, relish their humor. It has apparently always been so. Elsewhere I have described the measures taken by popular subscription to replace the losses suffered by the humbler members of the community, in the tools of life (see Chapter VII). It need not be said that the poorer members bear the rich in mind. Every person resident on the Hill has come to partake in this sense of the community, this practice of new Quakerism. No one is out of sight and yet there is no dream of equality behind this communal sense. It is as far from a communistic, as from a charitable state of mind. It is the result of years of belief in common men and common things.

This "make believe" that commonplace things are the spiritual things was a corrolary of George Fox's life as much as of his doctrine. He opposed pomp and ritual, salaried priests, ordinations and consecrations; he disbelieved in "the imposition of hands." His followers therefore went so far as to find in plainness a new sanctity. They adapted at once the "plain garb" of the period of William Penn and Robert Barclay, and the generations of men who followed felt themselves morally bettered by a drab coat and breeches, a white neck-cloth, and a broad-brimmed brown hat; the women by dresses of simple lines, low tones of color, bonnets of peculiar shape, shielding the eyes on either side.

Of course in time this exceptional garb by its uniqueness defeated the very desire George Fox had for "plainness." It was not commonplace but extraordinary. Roby Osborn's garb is thus described by her biographer: "Her wedding gown was a thick, lustreless silk, of a delightful yellowish olive, her bonnet white. Beneath it her dark hair was smoothly banded, and from its demure shelter her eyes looked gravely out. Her

vest was a fine tawny brown, of a sprigged pattern, both gown and vest as artistically harmonious as the product of an Eastern loom. Pieces of both were sewn into a patchwork quilt, now a family heirloom."\*

For more than a century now "plainness in dress" has been extravagance in dress. A proper Quaker hat for man or woman costs twice or thrice what plain people of the same station in life would pay. But be it so. In its day, which is now gone—for only one person now wears "plain dress" on Quaker Hill—it was a true expression of the "make believe" of sanctity in plainness. The quiet colors, the prescribed unworldliness involved a daily discipline, and infused into the wearer an emotional experience which mere economy and real commonness would never so continuously have effected.

The "plain speech" has the same effect. It is part of the same dramatic celebration of an ideal. It is a use of quaint and antique forms, not grammatically correct nor scriptural, in which "thee" takes the place of "thou" and you in the singular, both in the nominative and objective cases. It is not used with the forms of the verb of solemn style, but with common forms, as "thee has" instead of "thou hast." Another element of the "plain speech" is the use of such terms as "farewell" for "good day"—which is declared to be untruthful on bad days! The Quakers also address one another by their first names, and the old-fashioned Friends addressed everybody so, refusing to use such titles as "Mr.," "Mrs.," or "Miss."

Of late years the younger members of the Meeting, while maintaining their standing there, have used with persons not in the Meeting the ordinary forms of speech, as they have refused to assume the Quaker plain garb. With fellow-Quakers and with members of their own families they say "thee."

Before the period of the mixed community this power of

\* "Richard Osborn—a Reminiscence," by Margaret B. Monahan; Quaker Hill Series, 1903.

idealization, of "making believe," had wrought its greatest effects, but it still has full course and power without the highest direction. The minds of the residents of the Hill are very suggestible; but the persons who have the power to implant the suggestion are no longer inspired as of old, with a sublime and unearthly ideal. They are only animated with an economic one. But the result is the same. It is social, rather than religious. It was one thing for the early Friends to cement together a community through the feeling that in every man was the Spirit of God. A wonderful appetite was that for the assimilation of new members coming into the community. It was a doctrine that made all the children birth-right members of the Meeting and so of the community.

But in our later time, between 1895 and 1905, this power of "making believe" had suffered the strain of a division of the meeting. It was harder to believe that the Spirit of God was in all men, when half the community was set off as "unorthodox." It had suffered the strain of seeing the wide social difference caused by money. Yet it bravely played the game. Children are not more adapt at "making believe" than were these old Friends. They deceived even themselves; and their "pretending" assimilated into the communal life every newcomer. For it created underneath all differences a sense of oneness; it kept alive, in all divisions, many of the operations of unity. It compelled strangers and doctrinal enemies to "make believe" to be friends.

I find it difficult to describe this elusive force of the communal spirit in the place, just as the communal character of the place is itself evanescent, while always powerful. I know clearly only this, that it proceeded, and still on Quaker Hill proceeds from the old religious inheritance, and from the present religious character of the place; that it tends directly to the creation of the community of all men, of all different groups, and that it is ready at hand at all time, to be called

to the assistance of anyone who knows how to appeal to that communal unity; and that it is a power of idealization, meaning by that "a power of making believe." In this power, I recognize this community as being more expert and better versed than any I have ever known.

The dramatic expression of an ideal has had great social power. Upon the casual observer or visitor it has wrought with the effect of a charm to impress upon them in a subtle way the ideal of Quakerism. Expressed in words, it would have no interest: acted out so quaintly, it awakens admiration, interest, and imitation, not of the forms, but always in some degree of the substance of the Quaker ideal.

Thus the Quaker ideal has given authority to the Friends, especially to the older and more conservative of them; has furnished a subtle machinery for assimilating new members into the community and thus has been an organizing power.

## CHAPTER VII.

### MORALS OF THE QUAKER COMMUNITY.

From the first the members found themselves subjected to a clear, simple standard of morals. Its dominion was unbroken for one hundred years, and came to an end with the Division of the Meeting; though that event was a result as much as a cause of its termination. For one hundred years a local ethical code prevailed. While they lived apart the Quakers in their community life rejoiced in the unbroken sway of a communal code of morals, the obedience to which made for survival and economic success. When, with better roads to Poughkeepsie and to Fredericksburg, newcomers began to invade the community; when in 1849 the railroad came to the neighborhood, immersing the Quakers in the world economy, the Quaker code was insufficient, retarded rather than assisted survival, and rather forbade than encouraged success. It therefore lost its force. Only in a few individuals has it survived.

The residents of the Hill, from their earliest settlement in 1728 to the time of the Division in 1828, knew no other government than that of the Meeting. They accepted no other authority, hoped for public good through no other agency, even read no other literature, than that of the Quaker Monthly Meeting of the Oblong. The religious Meeting House was also the City Hall, State House, and Legislature for the patriotism, as it was the focus of the worship and doctrinal activity of this population. This cannot be stated too strongly, for there was no limit to its effect. It explains many things otherwise diverse and unexplained.

↓ During all the periods of war the Quakers showed their

separateness by refusing to pay taxes, lest they contribute to the support of armies. In the Revolution, the Meeting exercised unflinching discipline, for the purpose of keeping members out of the patriot armies, and punished with equal vigor those who paid for the privilege of exemption from military duty and those who enlisted in the ranks. In every act of the discipline of the Quaker Community appears the purpose of the Meeting, namely, to keep its members to itself and away from all other moral and spiritual control. This will appear in definite illustrations below.

The standard of morals which the Meeting thus upheld with jealous care was a simple one, and logically derived from the distinctive doctrine of the Society of Friends. That the Spirit of God dwells in every man was their belief,\* and from 1650, when Fox was called "a Quaker" before Justice Bennett at Derby, England, to the Division in 1830, they applied this doctrine in practical, rather than in metaphysical ways. They were a moral, rather than a theological people. It will appear in this chapter that only when the moral grip of the Meeting was broken in a division did doctrinal questions come to discussion on the Hill.

The moral bearing of the one cardinal doctrine of Quakerism is well expressed in the following quotation from a Friend qualified to speak with authority:

"The Friends have been consistent in all their peculiarities with one central principle, the presence and inspiration of the

\* Francis B. Gummere of Haverford College says of George Fox, the founder of the Society of Friends: "The central point of his doctrine is the direct responsibility of each soul to God, without mediation of priest or form, because of the presence of the Holy Spirit in the heart of every human being." Johnson's Universal Cyclopedia, 1894.

The following is authoritative for the Society: "We believe in no principle of life, light or holiness, but the influence of the Holy Spirit of God, bestowed on mankind, in various measures and degrees, through Jesus Christ our Lord. It is the capacity to receive this blessed influence, which, in an especial manner, gives man pre-eminence above the beasts that perish; which distinguishes him, in every nation and in every clime, as an object of the redeeming love of God; as a being not only intelligent but responsible; . . . —"A Declaration of Some of the Fundamental Doctrines of Christian Truth, as held by the Religious Society of Friends."

Divine Spirit in the human soul. This has been the reason for their opposition to slavery. They felt, You cannot hold in slavery GOD! And God is in this black man's life, therefore you cannot enslave God in him. So you must not inflict capital punishment upon this man in whom is God.

"The same argument dignified woman, who was made the equal of man. The same argument applies to the impossibility of war. You cannot think of God fighting against God. The Quaker had no sentimental idea of suffering; but he believed that you cannot take life, in which is God.

"The same argument applied to weights and measures; the Quakers early demanded that they be officially sealed. So they believed in only one standard of truth, rather than one for conversation and one for a court of justice. No oaths were necessary for those who spoke for God all the time."\*

In this belief one sees the principle on which were selected the reforms in which the Quaker Preacher was interested. "He appears to have had . . . his mind strongly influenced to an active protest against the evils of slavery, war, capital punishment and intemperance."† Each of these reforms was inspired by reverence for human life, which was thought to be desecrated or abused.

This simple code expressed itself in abstinence from practices believed to defile the body. Members of the Meeting early adopted a strict rule against the use of intoxicating liquors. It is said of the ancestors of Richard Osborn that: "Of these six generations not a man has ever been known to use spirituous liquors, or tobacco, to indulge in profanity, or to be guilty of a hisronest action."‡

A sense of personal degradation underlay their opposition to poverty among members. There is record of an order of the

\*Mr. James Wood, in an address at Quaker Hill Conference, 1907.

† "David Irish, A Memoir," by Mrs. Phoebe T. Wanzer.

‡ "Richard Osborn, a Reminiscence," by Margaret B. Monahan.

Meeting, in 1775, for the purchase of a cow "to loan to Joseph ——." The practice thus early observed has since then been unbroken. The member of the community who comes to want is at this day taken care of by popular subscription. Through the early century the Meeting accomplished this end, sometimes by formal, sometimes by informal methods. In the later years of the nineteenth century it was accomplished by special funds to which everybody gave. Thus simply was poverty forestalled. The family assisted soon came to self-support again. No debt was incurred, and no obligation remained to be discharged; but every member of the Meeting and of the community felt obliged to give and was glad to give to this anti-poverty fund. The basis of it seems to have been respect for human embodiments of the Divine Spirit.

This ideal of personality, divinely indwelt, created a sense of personal duty, even in opposition to all men. In the years of anti-slavery agitation David Irish and his sister "made their protest against slavery by abstaining as far as possible from slave-made products; and together they made maple, to take the place of cane sugar, and used nothing but linen and woolen clothing (largely homespun)."\* This later Quaker, possessed of the spirit of the community of his fathers, shows his inner conflict with the ideals of a competitive age in the expression "so far as possible." It was not as practicable in 1855 to "abstain from slave-made products," as it would have been in the year 1755.

The hospitality of the neighborhood expressed this simple code. It was the custom to entertain the traveler in any house to which he might come. It would have been wrong to exclude him; he was welcomed with a dignified and formal respect by these old Friends, because entertainment of guests

\* "David Irish, A Memoir," by Mrs. Phoebe T. Wanzer.

in those days was a vital reality, as well as a religious practice. These settlers in the wild forests believed that in every wayfarer was a divine voice, a possible message from heaven. They also treated every traveler as a possible object of their "preachments," and spared not to "testify" to him of their peculiar beliefs and "leadings." It was the Friends' method of propagating their gospel to send men and women on journeys, without pay, to distant states and provinces. This religious touring was not peculiar to them, but it was made by them an official agency of great power in evangelizing the Colonies.

As an itinerant Friend, Woolman, the anti-slavery apostle, came to the Hill in 176—. So Paul Osborn joined himself to a party of Friends "travelling on truth's account," and with them visited the Carolinas, in the years before the Revolution. The same pioneer left in his will directions for the entertainment of such travellers upon his estate forever.\*

This religious itinerating was a part of the economic life of those days as well; for the Friends never separated the one from the other. Wherever they went they "testified," and to every place they came with shrewd appreciation of its value as a place of settlement. Says James Wood: "Each Quaker home as it was settled became a resting-place for those who followed, for it was a cardinal principle of Quaker hospitality to keep open house for all fellow-members, under all circumstances.†

\* To "friends travelling on truth's account" the doors of the old house always swung wide. Paul Osborn kept open house for "his friends, the people called Quakers," during his lifetime, and his will provides in the most minute and careful manner for his wife "the better to qualifye her to keep a house of entertainment for friends." . . . The "littell meadow in lot 29" he gave to Isaac Osborn, that "he shall keep well all horses of friends my wife shall send him;" and should Isaac "neglect the injunctions herein enjoined," and cease to keep such house of entertainment for friends then his right to certain legacies "shall descend and revolve to them, him or her that shall truly fulfill them." All his lands in the latter case Paul gives to the "Yearly Meeting for Friends, the people called Quakers, of Philadelphia."—"Richard Osborn, a Reminiscence," by Margaret B. Monahan.

† "The Bi-Centennial of the New York Yearly Meeting, An Historical Sketch," by James Wood, 1895.

The development of the hospitality that was a part of the religion of the Quakers would be itself a sufficient study. It has furnished some of the most interesting chapters of the history of the Hill. It is now completely transformed, through the pressure of competitive economic life; and, with undiminished activities, has become a means of revenue in "the keeping of boarders." Seven of the old Quaker homes, in the period of the Mixed Community, took on the aspect of small hotels. For this business the Quakers have a preparation in their history and traditions. They have an inbred genius for hospitality. They have also a thrift and capacity for "management" which have made their efforts successful. One is impressed in their houses by a union of abundance with economy, impossible to imitate.

Like other American pioneer neighborhoods, of a religious type, the Quaker community at Oblong had a history in the matter of sexual morality. The relations of the sexes offered to the Friends a field in which their favorite doctrine of the indwelling divine spirit produced moral harvests. The records of Oblong Meeting are filled with cases of moral discipline. There is scarcely a meeting in whose minutes some case is not mentioned, either its initial, intermediate or final stages. No family was exempt from this experience. The best families furnished the culprits as often as they supplied the committees to investigate and to condemn.

The regular method of procedure in marriage will best exhibit the moral standards of the time. When a couple would marry, they indicated to the Meeting their intention; and a committee was at once appointed to investigate their "clearness." That is, these two must be free of other engagements, and must be free of debt or other incumbrance of such sort as would render marriage impossible or unadvisable. At the next monthly meeting the report of the committee advanced the case one stage; and if they were found "clear of all

others," another committee was appointed "to see that the marriage was orderly performed."

The parties on the day set appeared before the Meeting,\* and in its regular course, stood up and said the words of mutual agreement which made them man and wife. A certificate was used, and to it the guests signed their names. But no minister had official part in the ceremony. It was their belief, to which they adhered with logical strictness, that the divine spirit in each of the parties to a marriage made it sacred, and that in marrying they spoke the will of the Spirit.

Entire continence was expected of every unmarried person, and the strictest marital faithfulness of man and wife, because of the sacredness of personal life. But in a pioneer society, through those rough early decades, when for long times war was disturbing the serenity of social life, the conduct of men and women, not mindful of propriety, was determined by the strong, masterful passions of an out of door people. Besides, the government of the Meeting was contrary to the general opinion of the countryside, and the Meeting House members were immersed in a population whose standards were looser, as well as sanctioned by authorities not recognized by the Meeting. The result was that in the first century of the Hill, 1728—1828, there were many instances of sexual immorality, many accusations of married persons untrue to their vows, and a resulting attention of the whole community to this theme which we do not know to-day. Frankness of discussion of these matters prevailed. The punishments inflicted,

\* "It was Wednesday, the day of the regular mid-week meeting, and the house was crowded. The young people took their places upon the facing seats, and the meeting began. Daniel Haviland was minister and he spoke at length. Then, after a short pause, Richard Osborn and Roby Hoag arose, and clasping hands, spoke alternately the solemn sentences of the Friends' marriage ceremony, which have united them for sixty years. Then was brought forth the marriage certificate, fairly engrossed in the bridegroom's own hand, and many names of those present were affixed, after which it was read aloud. This being done, and kindly greetings offered, Richard and Roby Osborn drove back to their home. The wedding was well furnished with guests, and four fat turkeys graced the board that day." —"Richard Osborn, a Reminiscence," by Margaret B. Monahan. Quaker Hill Series.

the public confessions demanded, the condemnation of specific and detailed offences read from the steps of the Meeting Houses, were all as far from present day approval as the offences themselves from modern experience. The writer is sure that, comparing the records of the Quaker Community with his own knowledge of the annals of the Mixed Community, there were more offences of this kind considered by the Monthly Meeting of Oblong in any one year, 1728—1828, than were publicly known in a population of the same extent in the ten years 1890—1900. The commonest of these offences were simple cases of illicit relations between unmarried persons, or between persons, one of whom was married; the offence often being associated in the minds of the accusers with “going to frolicks.” In these, as in all cases, the Meeting received the complaint and appointed a committee to investigate and to labor with the accused. On receiving its report, if guilt was evidenced, the Meeting pressed the matter, often increasing the size of the committee. It always demanded an expression of repentance, and the restoration of right conduct, without which no satisfaction was to be had. If the accused persons, being found guilty, did not repent, they were in the end “disowned.” The disownment by the Meeting was a serious penalty. It diminished a man’s business opportunities, it shut the door of social life to him, and it effectually forbade his marriage within the Meeting.

Its power is shown in a number of cases recorded in the minutes, in which the ban of the Meeting had been laid upon some one, who was compelled later to come to the Meeting, make a tardy acknowledgement, and be restored, before he could proceed freely in some of the communal activities controlled by the Meeting. Often the committee appointed by the Meeting reported that they were not satisfied with the repentance offered, seeing in it evidently more of policy than penitence. Usually they received, in later visitations of the

accused, sufficient tokens of submission, and the Meeting was satisfied; but not always.

The most curious instance of the working out of this control exercised by the Meeting, especially over the sexual relations, is in the marriage of Joseph — with Elizabeth —. The first act in the little drama was the formal written statement of Joseph that he was sorry for "having been familiar with his wife before his marriage to her." The Monthly Meeting appointed a committee, as usual, after making record of this "acknowledgment." After a month the committee reported that they had visited Joseph, and found his repentance sincere; and another committee was appointed to draw up a testimony against his former misconduct, to which Joseph was required to subscribe; and in a later month to hear it read from the steps of the Preparative Meeting in the neighborhood where he lived—or perhaps in that in which the offence was best known. After this had all been done, with patient detail, and reported and recorded, a further month elapsed, and then announcement was made at the Meeting of the intention of Joseph and Elizabeth to marry. The reader is astonished, thinking that Joseph has already evidenced his loyalty to his wife. A closer re-reading of the stages of the incident shows that the wife mentioned in the original offence was now dead; but that the offence was not dead. Joseph had to be restored to the Meeting before he could marry Elizabeth, who was very evidently a devoted member. To win his new wife, he had to make acknowledgment of the offence which preceded his former marriage.

This incident illustrates the whole attitude of that community toward these moralities. They were thought to be defilements of the body, the temple of God. No change of outward condition could eliminate the offence, which must be wiped out by repentance, public acknowledgment and formal restoration.

It is evident from the foregoing that the Meeting maintained control over the community, at least of its own members, by possessing an effective power to approve or to disapprove of the economic and the marital condition of each individual.

The code of morals practiced in this community required strict business honesty. The Quaker has moral discretion in economic affairs. He "expects to get what he pays for, and he expects to give what he has agreed." The honesty of "stroke-measure," by which bushels are topped off, the faithful performance of contracts and payment of debts were inculcated by the Meeting and enforced by its discipline.

This chapter may fitly close with a statement of the anathema of Quakerism, pronounced many times in a year, during the century. The offence selected shall be a moral one:

"Whereas, Jonathan Osgood hath had a right of membership among us, the people called Quakers, but not taking heed to the dictates of truth, hath so far deviated from the good order established among Friends as to neglect attendance of our religious meetings for worship and discipline, to deviate from the plain scripture language, and to refuse to settle with his creditors, and pay his just debts; and hath shut himself up concealed from the civil authorities, therefore for the clearing of truth and our Religious Society we do testify against his misconduct, and disown him, the said Jonathan Osgood, from being any longer a member of our Society, until he shall from a true sight and sense of his misconduct condemn the same to the satisfaction of the Meeting. Which that he may is our desire for him. Signed, in and on behalf of Purchase Monthly Meeting this     th day of the     th month."

The above wording except the name is taken from the minutes of Purchase Meeting; and some of the offences mentioned in a few pages of those minutes, for which men were

disowned, or for acknowledgment pardoned and restored, are the following: "deviating from plainness of speech and apparel"—"not keeping to the plain scripture language;" "going to Frolicks," "going to places of amusement," "attending a horserace;" "frequenting a tavern, being frequently intoxicated with strong liquor;" "placing his son out apprentice with one not of our Society;" "leaving his habitation in a manner disagreeable to his friends;" "to use profane language and carry a pistol, in an unbecoming manner;" "bearing arms;" "to challenge a person to fight;" "to marry with a first cousin;" "to keep company with a young woman not of our Society on account of marriage;" "to be married by a magistrate;" "to marry with one not of our Society before a hireling priest;" "to join principles and practice with another society of people;" "to be guilty of fornication;" "to be unchaste with her who is now my wife" (the person afterward married by the accused). Oblong minutes: "to have bought a negro slave," "to have bought a negro wench and to be familiar with her."

It was the operation of this code of morals, and of its ecclesiastical checks and curbs, that made the Quaker Hill man and the Quaker Hill sentiment what they are. And having done its work this code at the last tended to weaken the Meeting, as it had strengthened the public conscience. In talking recently with a sweet old lady past eighty, I asked her, "Did you ever hear anyone disowned in meeting?" "No," she never had, and "doubted if there had been many." Later, her daughter said, "Why, Grandmother, you married out of meeting yourself!" Whereupon I asked again, "Well, what did they do with you then?" "Oh," she replied, not at all embarrassed, "they turned me out!"

"But what was the outcome of it all?" asks James Wood, in the closing sentences of his monograph, "The Purchase Meeting." He continues: "As a church the Quakers here

missed their great opportunity. As settlers came among them<sup>7</sup> in increasing numbers, the Friends became solicitous to preserve the strictest moral observance among their members. They withdrew from contact and association with the world<sup>6</sup> about them and confined their religious influence and effort to themselves. The strictest watch was maintained over the deportment of old and young. Members were dismissed for comparatively slight offences. Immigration further reduced their numbers. Hypercriticism produced disagreements among themselves. Finally, doctrinal differences arose which resulted in a disastrous separation into two bodies in 1828.”<sup>4</sup>

## CHAPTER VIII.

### THE TOLERATION OF HOSTILE FORCES.

Quaker Hill has been always a place of peace. The earliest settlers came to make an asylum for the propagation of the principles of peace. I have spoken elsewhere of their consistent belief and practice of this principle.

The community always acted promptly in response to the known injury of its members. The Quakers have a "Meeting of Sufferings," at which are related and recorded the persecutions from which they suffer. This community, which for one hundred years was Quaker, has always been prompt to act "solidly and judiciously" in support of the injured. An illustration is the riot in opposition to Surgeon Fallon, who in January, 1779, was left here with convalescent soldiers in the Meeting House. It is very interesting as showing the length to which men will go in the interest of peace, even to the use of violence. It illustrates also the fact that kindness to the sick and wounded, simply because they are helpless and needy, is modern, a humanitarian not a dogmatic development.

To superior power the Quakers of this place have always submitted. Their forefathers were loyalists in England, and they in America, till far into the Revolution. But see the resolutions passed in April, 1778:

"The answering of the 14th Query Respecting the Defrauding of the King of his dues is omitted by reason of the Difficulty of the times therefore this meeting desires the Quarterly meeting to Consider whether it would not be well to omit the answering that part of the Query in futur until the way may appear more Clear." This action was taken by

the meeting five months before the coming of Washington to the Hill, immediately after the heroic winter of Valley Forge and just before the British retreated from Philadelphia. An official body which could speak of dues to the king at that time, after their country had been separated from him for three years, surely represented a community in which the great majority were Loyalists, and the disorderly and violent were Tories.

But the non-resistant character of the neighborhood, perched between the Connecticut Yankees, who took ardent interest in the Revolution, and the aggressive settlements of Pawling, Fredericksburgh and Beekman, rendered the Hill at times an asylum, strange to say, of the most adventurous forces. Whenever in Colonial days an adventurer or soldier sought a peaceful region in which to recruit his forces, he thought upon Quaker Hill; and in four memorable instances used the Hill as a place of safe refuge. There no one would by force resist his enjoyment of a time for recruiting.

The first instance of this is the so-called "Anti-Rent War," which in 1766 excited the inhabitants of Dutchess and Columbia Counties. Its sources were in the land grants made by the Crown, and in the independent character of the settlers in this state. The series of disturbances so caused continued until well into the years of the nineteenth century. They concern the local history only in one year, 1766.

The Anti-Rent War of 1766 is a forgotten event. But in that time it aroused the Indians and the white settlers to revolt. Bodies of armed men assembled, British troopers marched from Poughkeepsie to Quaker Hill, to seize a leader of rebellion; and at the time of his trial at Poughkeepsie in August, 1766, a company of regulars with three field-pieces was brought up from New York.\*

\* "Dutchess County in Colonial Days," 1898, and "Dutchess County," 1899, papers read before the Dutchess County Society, in the City of New York, by Hon. Alfred T. Ackert. Also, "History of Dutchess County," by James H. Smith.

The prime cause of this insurrection was the granting of the land in great areas at the beginning of the century to favored proprietors, so that the actual settlers could not become owners but only tenants. Fragments of such great estates remain in the hands of certain families till our time. The ownership of Hammersley Lake by the family of that name is an example. The exercise of authority by these monopolists of natural opportunities drove the actual tillers of the soil, who had given it its value, to desperation. I have shown that in 1740 no land owners were enrolled on Quaker Hill, and that the list of its most representative citizens in 1755 contained few landowners.\* A further cause of this conflict may have been that, in the year of the settlement of the boundaries of the Oblong it was granted to one company by the British Crown, and to another by the Colony of New York. This brought the title of all the lands on the Oblong into dispute. Moreover, boundaries were carelessly indicated and loosely described, a pile of stones or a conspicuous tree serving for a landmark. All this worked great confusion, for the settlement of which in a crude community courts were ineffective.

Finally the popular discontent broke out to the north in armed refusal of settlers to pay the rents exacted. The movement spread from Dutchess to Columbia County. William Prendergast, who is said to have lived in a house standing on the ground now part of the golf links in Pawling, was the leader of the insurgents in this county. He assembled a band on Quaker Hill so formidable that the grenadiers at Poughkeepsie waited for reinforcements of two hundred troopers and two field pieces from New York before proceeding against him. The sight of the red coats was enough. Prendergast surrendered. But so great was the local excitement that, to forestall an attempt to rescue, he was taken a prisoner to New York. In July he was brought back for trial; and on the

\* See pp. 20 and 21.

same boat with the King's counsel, judges, lawyers and prisoner came a company of soldiers to put down the continued disturbance in Columbia County.\*

The trial occurred the first fortnight of August. Prendergast was assisted in his defense by his wife, who made a strong impression on the jury, proving that her husband, before the acts of which he was accused, was "esteemed a sober, honest and industrious farmer, much beloved by his neighbors, but stirred up to act as he did by one Munro, who is absconded." So ardent was this woman advocate that the State's attorney forgot himself and moved that she be excluded from the court room. The motion was denied, and the mover of it emphatically rebuked. But there was not lacking proof of the fact of treason, and Prendergast was convicted and sentenced to be hanged in six weeks. Then this valiant woman's energy and perseverance rose to their highest. She set off for an audience with the Governor, Sir Henry Moore, Bart., and returned about the first of September with a reprieve. Just in time she arrived, for a company of fifty mounted men had ridden the whole length of the county to rescue her husband from the jail. She convinced them of the folly of such action as they proposed, and sent them home, while she turned to the task of obtaining a pardon from the King. Here, too, she was successful; for, six months later, George III, who required six years to be subdued by a Washington, released her husband. They arrived home amid great popular rejoicings.

William Prendergast and Mehitabel Wing, whose descendants settled later about Chautauqua Lake, New York, were bound to the Quaker Community by ties of marriage and of trade. William was not, so far as I can learn, a member of the Meeting; but Mehitabel was a daughter of Jedidiah Wing,

\* See "New York Mercury," July 28, 1766, August 18 and 25, 1766, September 15, 1766. See also "Dutchess County," by Alfred T. Ackert, 1899, p. 5.

whose family was devoted to the Society from 1744 until the "laying down" of the Meeting in 1885. William Prendergast was, however, a member of the community. His name heads an account in the ledgers of the Merritt store, in 1771 and 1772, and his purchases indicate that he was a substantial farmer whose trading center was Quaker Hill.\* Prendergast was an Irishman.

Before the Revolution he with his family and possessions, a caravan of seventeen vehicles and thirty horses, emigrated westward, going as far south as Kentucky, then north through Ohio and New York. A part of the family company proceeded to Canada. His son James settled, with other Prendergasts, on Chautauqua Lake, and became the founder of Jamestown, where his family, now extinct there, has given the city a library. When William Prendergast and Mehitabel Wing, his resolute wife, died, is not known. None of that name is later found on or near Quaker Hill.

The motive of their hegira appears to have been chagrin and a sense of humiliation at the sentence of death pronounced upon the head of the family. In the Prendergast Library at Jamestown is a book containing family histories, which came from the Prendergast private library. From this book two pages had been cleanly cut away. The Librarians set themselves to replace the lost material, and after patient efforts in many quarters, discovered another copy, and had typewritten pages made and pasted in. Upon the missing pages, thus replaced after the extinction of James Prendergast's family, was found the account of William Prendergast's sentence to be hanged. His descendants, had they lived longer, might have been more proud than ashamed of his rebellion against injustice.

The Quakers, because they would passively tolerate an intrusion, were forced to harbor another rendezvous of turbulent men. It is said that Enoch Crosby, the famous spy

\* See Appendix B.

of the Revolution, who is believed to have been Cooper's model for the hero of the novel, "The Spy," came to Quaker Hill during the Revolution, in pursuance of a plan he was at that time following, and got together a band of Tory volunteers, who were planning to join the British army; and delivered them to the Continental authorities, as prisoners. In this he was assisted by Col. Moorehouse, who kept a tavern on a site in South Dover, opposite the brick house which now stands one-half mile south of the Methodist Church.

I have spoken above of the sullen loyalty of the Quakers to the British Crown during the Revolution. It may have been in part owing to their loyalty that their neighborhood became more congenial for the Tories who during that period harried the country-side. The Quakers were Tories, and are so called in the letters of the period; but the word "Tories" remains in the speech of Quaker Hill as a name of opprobrium. It describes a species of guerillas who infested parts of New York and Connecticut.

The "Tories" of the Revolutionary days furnish the substance of the stories of violence that are told about the fire-side to Quaker Hill boys and girls. It is difficult, however, to persuade those who have heard these tales to relate them. Those who know them best are the very ones who cannot recall them in systematic or orderly form. I mention only one more of the free lances of the time. The chiefest of all bandit-leaders of those turbulent times was Waite Vaughn. It is related that this fellow was the head of a band of Tories, which means locally the same that the term "Cowboys" or "Skinners" means in the history of Westchester County. The latter were lawless bands who infested the regions in which the armies made civil life insecure, and subsisted by stealing cattle, plundering houses, robbing and often murdering citizens. "They seemed," says a writer, "like the savages to enjoy the sight of the sufferings they inflicted. Oftentimes they

left their wretched victims from whom they had plundered their all, hung up by their arms, and sometimes by their thumbs, on barndoors, enduring the agony of wounds that had been inflicted to wrest from them their property. These miserable beings were frequently relieved by the American patrol."\* Waite Vaughn lived in Connecticut in the part of New Fairfield known as Vaughn's Neck. Under the house, recently demolished, in which "Dr. Vaughn," his brother, is said to have lived during the Revolution, was found rotted linen below the cellar floor. Behind the great heap of the chimney also was found a secret cellar, for years forgotten, in which, among other rubbish of no significance, are said to have been found counterfeit coins of the Revolutionary period and other evidences of outlaw practices in that time.†

Vaughn used to ride at night with his troop to Quaker Hill, through Connecticut neighborhoods, which knew the sound of his passing. The Pepper family still relate the tradition of his riding up "Stony Hill," past the point where stands Coburn Meeting House, in the night, while they and their neighbors stayed discreetly indoors. This rendezvous was a place in the woods on Irish land, about half way between Sites 96 and 120, now known as "The Robber Rocks." Here the Vaughns are said to have concealed booty at times, and from this point they made forages upon farmhouses in the richest neighborhoods of this vicinity. Probably they spared the Quakers. I will speak later of the fact that Quakers have ways of their own for protecting themselves against intruders. Moreover, their men were not gone to the war.

The record of these years, on the pages of the clerk's minute-book, are a disappointment. One searches in vain for even the slightest trace of the presence in the Meeting House of the troops. There is no record of the presence in the Meet-

\* Thacher's "Military Journal of the Revolution."

† The narrative of Vaughn is gleaned from old residents, Almira Briggs Treadwell, Archibald Dodge, Jane Crane, and others.

ing House of the "Tories" or guerillas of the Revolution; and not a word about the makers of the rifle-ports in the gables of this building which the present writer discovered there, unless it be the unruffled and serene utterance, under date of 8th Month, 9th, 1781, the very period at which the "Tories" must have been at their worst: "Samuel Hoag is appointed to take care of the Meeting House, and to keep the door locked and windows fastened, and to nail up the hole that goes up into the Garratt." The "Tories" robbed the store on Site 28. They had hidden for that purpose in the loft of the Meeting House and were discovered by some young Quakers who were skylarking in the Meeting House under pretense of cleaning it. The story is that one of the young men, being dared—of course by a maiden—to open the trap-door into the garret, and look for the Tories, found them hiding there. The bandits, being discovered, tumbled down the hole from the garret, and compelled their discoverers to go with them to the store; and proceeded at once to plunder it, relying no doubt on the non-resistant character of the people of the Hill. They stacked their arms at the door and went about their business in a thorough manner. But there was that in the blood of some Quakers there that could not contain itself within the bounds of non-resistance, and one of them, Benjamin Ferris, cried out, "Seize the rascals." In the scrimmage that resulted from the excitement of this remark, the leader of the Tories was recognized by the young lady who had by her challenge to the young man discovered them, and being taunted by her was so incensed that he stabbed her. It is only said in closing the story that the blood of both the fair and adventurous young Quakeress whose abounding spirit brought on all the trouble, and that of the leader of the "Tories," flows in the veins, of some who live on the Hill in the twentieth century.

Samuel Towner, a relative of Vaughn, resident in the region of Fredericksburgh (now Patterson), returning from

a trip, once found Vaughn at his home, and urged him at once to leave, as his property would be confiscated, if Vaughn's presence there were tolerated.

Vaughn was once pursued by farmers near Little Rest, and was sighted and surrounded in a lonely road. He turned upon his pursuers coolly and said: "Now, gentlemen, you can arrest me, or kill me, but you must take the consequences; for I will kill some of you." Daunted by his resolution, they stood motionless while he crossed a fence and a field, and disappeared among the trees of a wooded hill.

Quaker Hill became known as Vaughn's rendezvous, and here he met his end, I think about 1781. His band had robbed the home of one of the Pearce family, then as now resident in the valley where Pawling village stands. The victim was hung up by his thumbs till life was almost extinct. The next day, Capt. Pearce, of the Revolutionary army, returned unexpectedly to his home, and set off with armed assistance for the Robber Rocks on Quaker Hill. Near that spot, in the fields east of Site 97, on the Wing lands, Vaughn and his men were resting, some picking huckleberries, and some playing cards on a flat stone. Pearce gave no warning, but opened fire at once. Vaughn fell mortally wounded. He was carried to John Toffey's residence, Site 53, where he soon died. He is buried under the trees outside the "Toffey Burying Ground," beside the brook, in the very heart of Quaker Hill, into which he had intruded because in that peaceful neighborhood he had for a time a safe asylum. With his death it is believed that his band dispersed, and their depredations ceased.

A peaceful people like the Quakers must find means of their own to protect themselves against intruders. No one can live long on Quaker Hill without knowing that they have done so. One may brusquely intrude once, but he will be a violent man indeed, not to say a dull one, who continues to enjoy invading the preserves of the "Friends." The fourth

instance of a forcible invasion of the Hill was that of Washington's army, which encamped in the vicinity in the fall of 1778, the Headquarters being in John Kane's house, on a site now within the borders of Pawling Village. See on Map 1, "HeadQrs."

On his arrival, September 19, 1778, Washington,\* with his bodyguard, was entertained for six days at the home of Reed Ferris, in the Oblong, Site 99,† an honored guest, when he moved to the place designated as his Headquarters on his maps by Erskine. His letters written during his residence here are all dated from "Fredericksburgh," the name at that time of the western and older part of the town of Patterson. Washington's general officers were quartered in the homes of various residents of the neighborhood. One was so entertained by Thomas Taber, at the extreme north end of the Hill. It is natural to suppose that others were housed in nearer places. That Lafayette was entertained at the home of Russell, who lived at Site 25, now the Post-office, is reliably asserted. The brick house standing at that time was torn down by Richard Osborn, who erected the present house. That Washington, with other officers, was entertained at Reed Ferris's home is asserted by the descendants most interested, and is undoubtedly true.

The Meeting House was appropriated by the army officers for a hospital, because it was the largest available building. The only official record, says Mr. L. S. Patrick, is that of Washington's order, Oct. 20th, "No more sick to be sent to the Hospital at Quaker Hill, without first inquiring of the Chief Surgeon there whether they can be received, as it is already full." Arguing from the date of Washington's order above, Oct. 20, and from that of Surgeon Fallon below, this

\* "Washington Headquarters at Fredricksburgh," by L. S. Patrick; Quaker Hill Series, 1907.

† This matter is very fully treated in "Washington's Headquarters at Fredericksburgh," by Lewis S. Patrick. Quaker Hill Conference Local History Series, XVI. 1907.

use of the building for a hospital continued three and perhaps five months. Meantime the Friends' Meetings were held in the barn at Site 21, then the residence of Paul Osborn. This barn had been the first Meeting House erected on the Hill in 1742. It was removed to Site 21 in 1769, when it was used as a barn till 1884, when it was removed by the present resident.\*

There is no mention, even by inference, in the records of Oblong Meeting that proves this occupation of their building by soldiers. It was not voluntarily surrendered; other records show that the use of the building was supported by force; its surrender was grudging, not a matter to be recorded in the Meeting. It is characteristic of the Friends that they ignored it.

This toleration of the Hospital was never sympathetic. A letter of great interest to the student of those times was written to the Governor of the State of New York, Hon. George Clinton,\* by Dr. James Fallon, physician in charge of the sick which were left on Quaker Hill, in the Meeting House, after the departure of the Continental army. He could get no one to draw wood for his hospital in the dead of winter, till finally "old Mr. Russell, an excellent and open Whig, tho' a Quaker," hired him a wagon and ox team. He could buy no milk without paying in Continental money, six for one. He declared that "Old Ferris, the Quaker, pulpiter of this place, old Russell and his son, old Mr. Chace and his family, and Thomas Worth and his family, are the only Quakers on or about this Hill, the public stands indebted to." The two pioneers of the Hill, the preacher and the builder, were patriots as well. He denounces the rest as Tories all, the "Meriths," Akins, Wings, Kellys, Samuel Walker, the schoolmaster, and Samuel Downing, whom he declared a spurious Quaker and

\* See No. III, Quaker Hill Series, pp. 12, 42, and No. VIII, pp. 16, 17.

† Letters of Governor George Clinton," New York State Library.

agent of the enemy; also the preacher, Lancaster, "the Widow Irish;" and many he called "half-Quakers," who were probably more zealous, and certainly more violent for Quaker and Tory principles than the Quakers themselves.

The trouble culminated in Dr. Fallon's impressing the wagons of Wing Kelly and "the widow Irish," to take fourteen men to Danbury and Fishkill to save their lives. The former impress was not resisted; but the soldiers who took the Irish team had to battle with a mob, headed by Abraham Wing and Benjamin Akin, who used the convalescent soldiers roughly, but could not prevent the seizure. They were not the first men to do violence for the sake of the principle of non-resistance. One can see, too, that modern Quakerism has taken a gentler tone.

The small violence done by Abraham Wing and Benjamin Akin, like that of young Ferriss to prevent the robbery of the Merritt store, was ineffective. But the Quaker mode of self-protection was more effective than violence. They "froze out" the doctors and their soldiers from the Meeting House, by leaving them alone in the bitter winter, by letting them starve. The bitterness of their Toryism, and the zeal of Quaker ideals, the ardor of their "make-believe," carried them too far. They forgot mercy for the sake of opposing the cruelty of war.

Among the soldiers who lay sick in the Meeting House many are said to have died. They were buried in the grounds of the resident on Site 32, in the easterly portion of the field facing the Meeting House. No stones mark their place of rest, as none were ever placed in the cemetery of the early Quakers in the western part of the same field. Over them both the horses of persons attending meeting were tethered for many decades. The ploughman and the mower for years traversed the ground. But it is not forgotten who were buried there.

Says L. S. Patrick in his attempt to estimate the amount of

sickness and death of soldiers on the hill that winter:\* “Of the conditions existing, the prejudices prevailing, and the probable number in the Hospital, Dr. Fallon’s letter to Governor Clinton furnishes the only account known to exist: ‘Out of the 100 sick, Providence took but three of my people off since my arrival.’ On the occasion of the arrival of Col. Palfrey, the Paymaster General, at Boston from Fredericksburgh, General Gates writes to General Sullivan: ‘I am shocked at our poor fellows being still encamped, and falling sick by the hundreds.’

“The death list—out of the oblivion of the past but four names have been found—John Morgan, Capt. James Greer’s Co., died at Quaker Hill Hospital, Oct. 19, 1777 (?); Alexander Robert, Capt. George Calhoun’s Co., 4th Pa., Nov. 6, 1778; James Tryer, Capt. James Lang’s Co., 5th Pa., Oct. 22, 1778; Peter King, 1st Pa., enlisted 1777, Quaker Hill Hospital, N. J. (?) 1778 (no such hospital).

“Some doubt may exist as to two of these, but as the hospital is named, an error may exist in copying the original record.”

\* “Washington Headquarters at Fredricksburgh,” by L. S. Patrick, 1907.

## PART II.

### The Transition.

#### CHAPTER I.

##### COMMUNICATION—THE ROADS.

The roads were originally bridle paths, and to this day many a stretch of road testifies in its steep grade to its use in the days of the pack saddle. No driver of a wheeled vehicle would have selected so abrupt a slope.

In the early days the roads had a north and south direction. In the Period of Transition, with the diversion of commerce to the railroad in Pawling, the roads of an east and west direction became the principal roads, though the one great Quaker Hill highway north and south is still the avenue of communication on the Hill.

As the years passed wagons were used; indeed, by the time of the Revolution, in the second generation, they were bearing all the transportation. The state of the roads is shown, however, by the fact that Daniel Merritt was accustomed to pay, in 1772, £1, or \$5, for carting four barrels of beef to the river; that is, about 1,000 lbs. constituted a load. At the present state of the country roads, a Quaker Hill employer would expect 2,000 lbs. to make a load. The state of the roads before the turnpikes were made, that is, before 1800 to 1825, is described by a resident as follows: "The road was so full of stones, large and small, that people of to-day would consider impassable for an empty wagon, to say nothing of drawing a load over it. In the fall of the year it is said that toward evening one could hear the hammering of the wheels of the

wagons on the stones of the road a distance of four or five miles.”\*

I cannot learn that Quaker Hill was during the Quaker Period on any main line of country travel. Marquis De Chastelleux records in his “Travels in North America,” that he journeyed in 1789 to Moorehouse’s Tavern (see Map 1) along the Ten Mile River, two or three miles from the Housatonic to “several handsome houses forming part of the district known as *The Oblong*. The inn I was going to is in the Oblong, but two miles farther on. It is kept by Col. Moorehouse, for nothing is more common in America than to see an inn kept by a colonel . . . the most esteemed and most creditable citizen.” There was no inn on Quaker Hill and no colonel. The Quaker aversion to military titles was then as great as to the sale of rum. The houses referred to by the French traveller were probably the northern boundary of the Quaker community, at what is now Webatuck. I cannot find record of any post road coming nearer than this, until in the 19th century a stage was maintained between Poughkeepsie and New Milford, by way of Quaker Hill, making the journey every other day, and stopping at John Toffey’s store at Site 53.

The building of turnpikes became, in the years following 1800, a popular form of public spirit. Says Miss Taber: “In fact, turnpikes seemed to be a fad in those days all over the state and probably a necessary one. The longest one I learn of in this part of the country was from Cold Spring on the Hudson River to New Milford in Connecticut. The turnpike in which the people of this neighborhood were most interested was the one incorporated April 3, 1818, and reads, “That Albro Akin, John Merritt, Gideon Slocum, Job Crawford, Charles Hurd, William Taber, Joseph Arnold, Egbert Carey, Gabriel L. Vanderburgh, Newel Dodge, Jurs., and such other persons as shall associate for the purpose of making a good and suffi-

\* “Some Glimpses of the Past,” by Alicia Hopkins Taber.

cent turnpike road in Dutchess Co." It was named as the Pawlings and Beekman Turnpike, being a portion of what is known as the Poughkeepsie road passing over the West Mountain, but we do not find that anything was done until after the act was revived in 1824, when Joseph C. Seeley, Benoni Pearce, Samuel Allen, Benjamin Barr and George W. Slocum were associated with them."

The Pawlings and Beekman Turnpike maintained a toll-gate till 1905, when it was burned down; and the company, which had long discussed its discontinuance, then abandoned its private rights in that excellent stretch of road. The turnpike which crossed Quaker Hill ended at the Jephtha Sabin residence, known to the present generation as "the Garry Ferris place," Site 74. The roads of the neighborhood were the same in 1778-80 as at the present day, as will be seen from a comparison of Map 1, made by Erskine for Washington, and Map 2, which is a copy of the U. S. Survey; except the road from Mizzen-Top Hotel to Hammersley Lake, made after the hotel was erected. The comparison of maps shows also, to one who knows the use of these roads, that they have changed from a north and south use to an east and west use; the highway on the northward slope of the Hill in Dover, and on the southward slope in Patterson, being but little used to-day. The road from the Meeting House and cemetery westward, which was once much favored, is now scarcely ever used, and being neglected by the authorities, is little more than a stony gutter..

The whole character of the neighborhood was changed by a revolution in transportation. Not turnpikes effected the change, but railroads. The early years of the nineteenth century were filled with expectation of new modes of travel. Robert Fulton was building his steamboat amid the derision of his contemporaries, and to their amazement steaming up the Hudson against the tide. At first canals seemed to

country folk the solution of their problem. They occupied in the dawn of the 19th century the place which trolley cars occupy in the minds of promoters to-day. A canal was planned to run through the Harlem valley, where now Pawling stands, and Quaker Hill men were among the promoters of it, among them Daniel Akin and Johnathan Akin Taber.

Presently, however, came the promotion of railroads, and many of the same men who had favored the canals, entered heartily into the new projects. The foundation of Albert Akin's fortune was made when, about 1830, he began to borrow money of his neighbors and invest in the rapidly growing lines of steam-cars in New York State. There were those, however, who foresaw dire things from the new iron highway, and old residents tell of "one man who said that whosoever farm that locomotive passed through would have to give up fattening cattle, as it would be impossible to keep a steer on the place."

For many years the railroad came no nearer than Croton Falls. Richard Osborn used to tell the story of one resident of the Hill who boasted that he could go to New York and return the same day. This he finally attempted and accomplished by driving with a good pair of horses to Croton Falls in the morning, taking an early train to New York, returning in the evening, and driving home before night. This story, which is well authenticated, proves the good condition of some of the roads before 1849, for the drive to Croton Falls is about twenty miles. Among leading Quaker Hill residents who promoted railroads in the valley were Jonathan Akin, Daniel D. Akin, J. Akin Taber, John and Albert J. Akin. The two men who were most influential in completing the last link of the road—from the local viewpoint—were Albert Akin and Hon. John Ketcham, of Dover, both recently deceased. They supplied cash for the continuation of the road from Croton Falls to Dover Plains. To Mr.

Akin the promise was made that if he would supply a building for a station the road would place an eating house at the point nearest Quaker Hill. There was then no such village or hamlet as Pawling, the locality being known as "Goose-town." Patterson was an old village, west of its present business center one mile, and was known as Fredericksburgh. Dover also was a place of distinction in the country-side. Mr. Akin, with several yoke of oxen, hauled a dwelling to the railroad track from the site on which Washington's Headquarters stood in 1778; and thus was initiated the settlement of the village which is now among the most thriving on the road.

At that time Quaker Hill was the most prosperous community for many miles around. A description of its industries will be found elsewhere, in Chap. IV, Part I. The coming of the railroad changed the whole aspect of things. The demand for milk to be delivered by farmers at the railroad station every day, and sold the next day in New York, began at once. It soon became the most profitable occupation for the farmers and the most profitable freight for the railroad. Eleven years after the first train entered Pawling came the war, with inflated prices. The farmer found that no use of his land paid him so much cash as the "making of milk," and thereafter the raising of flax ceased, grain was cultivated less and less, except as it was to be used in the feeding of cattle, and even the fattening of cattle soon had to yield to the lowered prices occasioned by the importation of beef from western grazing lands. The making of butter and cheese, with the increased cost of labor on the farms, was abandoned, that the milk might be sold in bulk to the city middleman. The time had not come, however, in which farmers or their laborers imported condensed milk, or use none. Quaker Hill farmers lived too generously and substantially for that; but they ceased, during

the Civil War, when milk was bought "at the platform" for six cents a quart, to make butter or cheese.

Thus the Harlem Railroad transformed Quaker Hill from a community of diversified farming, producing, manufacturing, selling, consuming, sufficient unto itself, into a locality of specialized farming. Its market had been Poughkeepsie, twenty-eight miles away, over high hills and indifferent roads. Its metropolis became New York City, sixty-two miles away by rail and four to eight miles by wagon road.

With the railroad's coming the isolated homogeneous community scattered. The sons of the Quakers emigrated. Laborers from Ireland and other European lands, even negroes from Virginia, took their places. New Yorkers became residents on the Hill, which became the farthest terminus of suburban traffic. The railroad granted commuters' rates to Pawling, and twice as many trains as to any station further out. The population of the Hill became diversified, while industries became simplified. In the first century the people were one, the industries many. In the Period of the Mixed Community, in the second century, the people were many and the industries but one. I speak elsewhere of these elements of the mixed community. Suffice it to have traced here the simplifying of the economic life of the Hill, by the influence of the railroad, which made the neighborhood only one factor in a vaster industrial community, of which New York was the center. When the Meeting House and the Merritt store were for a century the centers of a homogeneous Quaker community, it was a solid unit, of one type, doing varied things; when Wall Street and Broadway became the social and industrial centers, a varied people, no less unified, did but one thing.

## CHAPTER II.

### ECONOMIC CHANGES.

The transition from the mixed or diversified farming of the Quaker community to the special and particular farming of the mixed community is written in the growth of the dairy industry, which in the year 1900 was the one industry of the Hill. In 1800 dairy products were only beginning to emerge from a place in the list of products of the Quaker Hill lands to a single and special place as the only product of salable value. While the Hill people constituted a community dependent on itself and sufficient unto itself, the exceptional fitness of the "heavy clay soil" to the production of milk, butter and cheese did not assert itself, and wheat, rye, flax, apples, potatoes were raised in large quantities and sold; but in the period of opening communication with the world in general, exactly in proportion as the Hill shared in the growth of commerce, by so much did the dairy activities supplant all other occupations. The order of this emergence is a significant commentary upon the opening of roads and the development of transportation. The stages are: first, cheese and butter; second, fat cattle; and third, milk. At the end of the Quaker community, when the best roads were of the east and west directions, and Poughkeepsie was the market-place, cheese and butter were made for a "money crop," by the women, who retained the money for their own use.

There is a story told in the Taber and Shove families, which prettily shows the customs in the Quaker century. Anne Taber, wife of Thomas Taber, substantial pioneer at the north end of the Hill, "had a fine reputation as a cheese maker." Being a New England woman, she was of the few who in Revolutionary days were in sympathy with the Col-

onies, and she gave forth that she would present a cheese to the first general officer who should visit the neighborhood. "One day, being summoned to the door," writes one of her descendants, "she was greatly surprised to find a servant of General Washington, with a note from him claiming, under conditions of the promise, the cheese. Of course it was sent, and the General had opportunity to test her skill in that domestic art."\*

The Taber family did not preserve that note; but in the Treasury Department of the United States, among Washington's memoranda of expenditures, is the item under date of Nov. 6, 1778, "To Cash paid servant for bringing cheese from Mr. Taber, 16 shillings." It would seem that the fame of Anne Taber's cheeses had won her a market with the officers at Headquarters, for sixteen shillings was payment "for bringing cheese" in large quantity, and the date is six weeks after the arrival of Washington for his stay in the vicinity.

In the ledger of the Merritt store, under date of Nov. 6, 1772, Thomas Taber, Esq., is credited as follows: "By 29 cheses wd. 484 lb. at 6d., £12 2s." In that year Thomas Taber, Esq., satisfied his account with an ox, £6 16s.; cash, £10; three pounds and nine ounces of old pewter, 4s. 6d.; seven hogs, £20 11s. 6d., and the above 29 cheeses. So that approximately one-fourth of the "money crop" of this substantial farmer was in the form of a dairy product. In the year 1895, the average Quaker Hill farm was producing, as will be shown in Chapter III, Part III, ninety per cent. of dairy product, namely milk.

The second phase of the industry proper to Quaker Hill was that of raising fat cattle. This culminated at the end of the period of the Quaker Community. In this industry were laid the foundations of some large fortunes. It brought in its day

\* "Thomas Taber and Edward Shove—a Reminiscence," by Rev. Benjamin Shove; Quaker Hill Series, 1903.

more money into the neighborhood than any other occupation had ever brought. It disappeared with the coming of the railroad into the valley, bringing, in refrigerator cars, meat from western lands, and killed in Chicago. Then the cattle were fattened on these hills, in the rich grass, and driven to New York to be killed and sold there.

In "Some Glimpses of the Past," Miss Taber says: "But the chief business of most farmers was the fattening of cattle. The cattle were generally bought when from two to three years old, usually in the fall, kept through the winter and the following summer fattened and sold. They were the only things that did not have to go to the river to reach the market. From all over the country they were driven to New York on foot, and the road through the valley was the main thoroughfare for them. Monday was the market day in New York and all started in time to reach the city by Saturday. From Pawling the cattle were started on Thursday, and those from greater distances planned to reach this part of their journey on that day. It used to be said that the dealers could tell what the market would be in New York on the following Monday by watching the cattle that passed through Pawling on Thursday. The cattle were collected and taken to the city by drovers; theirs was a great business in those days. Hotels or taverns were provided for their accommodation at frequent intervals along the road. Ira Griffin was a drover and Mr. Archibald Dodge remembers when a boy going to New York with him and his cattle, walking all the way. There were also droves of cattle other than fat ones, on the road, some called store cattle, and the books of Mr. Benjamin V. Haviland, who kept one of the taverns, show that in the year 1847 there had been kept on his place 27,784 cattle, 30,000 sheep and 700 mules, and it is said that occasionally there would be 2,000 head between his tavern and that of John Preston's in Dover. When Mr. Albert J. Akin was a young man he was consid-

ered an expert judge and buyer of steers for fattening, and generally had the finest herd of fat cattle."

This reference is to the business at its height and applies to the years 1800-1850. In the books of John Toffey's store are frequent references to the business.

Interesting material is furnished for the study of the period of transition, in the records of the store kept by John Toffey at Site No. 53. These old day-books and ledgers are incomplete, but they cover spaces of time in the years 1814, 1824, 1833; and their account of the purchases made by John Toffey's customers furnishes a record, we may suppose, of the goods brought into the households on the Hill at that time, from other communities; as well as the actual exchange of commodities on the Hill, where at that time diversified industries were carried on.

The growth of trade in these respects, from the period 1814-1816 to the period 1824-1833 will be considered in four lines, as it is exhibited in the commodities: first of Costume second of Food and Medicine, and third of Tools and Material for Industry, fourth, of House-furnishings. It is assumed that John Toffey kept a representative store, and that the growth in his trade corresponded to the growth in the commercial interchange in the community.

In 1814-1816 the imported goods kept and sold by John Toffey are cloth (perhaps in part locally manufactured), indigo, thread, cambric, penknives, knitting needles, spelled "nittenneedels," plaster, fine salt, molasses, tea, apple-trees, nutmeg, shad and occasionally other fish. The list is brief, and its proportion to the other commodities sold in the store evidences the simplicity of a community dependent chiefly upon itself, and living a life of rudeness and content.

Among prices which change in the twenty years recorded in John Toffey's books are those of molasses which was in 1814-1816 \$2.00 per gallon, and fell to \$1.25 and in 1824 to 35c. per

gallon. "Tobago" was sold in 1814 at \$2.75 per pound, and later for 62c. Flour was sold in 1814 for \$18 per barrel, or 9c. per pound; wool hats at \$4; fine salt 10c. per pound; plaster \$3.25 per hundredweight; boots at \$9.00; tea at \$2.75 per pound.

A day's work for a man in 1814-1816 was from \$1.00 per day for ordinary work, to \$1.25 for driving oxen, or \$1.50 for "digging a grave," or the same amount "for going after the thief."

House-rent is recorded at the rate of thirty dollars a year.

One may explain the high rates of many of these commodities, and the relatively high rate paid for labor by the prevalence of war prices at the time. Commodities such as molasses would be expensive as a result of the stoppage of sea-trade; and the labor market was exhausted to supply the army with soldiers.

In 1824 Toffey imported, for Costuming, shawls, crepe at \$1 per yard, silk, skein-silk, twist, ribbon, velvet at 90c. per yard, drab-cloth, flannel, braid, handkerchiefs, buttons and button-moulds, gloves, suspenders, calico, vest patterns, pins, chrome-yellow, "bearskin" at 82c. per yard, dress handkerchiefs, beads, buckles, silk flags and morocco skins.

Of new foods he imported molasses at 35c. per gallon, oranges at 2c. each, which he seems to have sold only one by one, sugar at 6c., tobacco at 12c., alum, tea at 85c., salt at \$1 per bushel, pepper, all-spice, raisins, salt-peter, pearlash, castile soap, hard soap, paregoric, ginger, logwood, vitriol, cinnamon, snuff, sulphur, cloves, mustard, opium, coffee, loaf sugar, watermelons, and seeds for beets, lettuce, parsnips.

Of House-furnishings, he had for sale, knives, forks—one set of knives and forks selling for \$13, plates, bowls, pitchers, mugs, teacups, teapots, decanters, almanacs, brooms, oilcloth, glass and putty, inkstands, bedsteads, spoons in sets, sugar-bowls, tin pans.

Of Tools and Materials for Industry he sold nails by the "paper," by the hundred and by the pound, files, oil at 75c. a gallon, locks, slates, paper, pocket-books, pencils, turpentine, raw steel and iron, spectacles at 34c., sandpaper, shovels and spades, screws, gimlets.

Rum, brandy and gin appear also, with powder, shot and fishhooks, as tributes to the convivial and adventurous spirit. But the convivial spirits were the better patrons, for there was scarcely an entry in certain years in which was not an item of alcoholic spirits. The sporting goods were only occasionally purchased.

In 1833 for Costuming, cotton-batting had appeared, and canton flannel, canvas, blue jeans at 83c. per yard, brown Holland, cloth at \$3.64 per yard, hats at 44c. each, hooks and eyes, pearl buttons at 10c. a dozen, side combs, bandanna handkerchiefs; while sole-leather was still sold in quantity, with buckskin mittens, which were scarcely made on the Hill.

For Industry, behold the arrival of pincers, gum arabic, "Pittsburgh cord" at 21c. per yard. In Housings, candles, frying pans, tin pails, dippers, tin basins, wash-tubs made their appearance; and in this year for the first time window-blinds were sold, for 75c.

For Food and Medicines John Toffey offered at this time codfish, coffee, souchong tea, crackers, castor oil, camphor gum, Epsom salts.

Meantime, a day's wages had fallen from \$1 and \$1.50 to 65c. and 75c. per day.

The growth of trade in John Toffey's store is summarized in Table I. In this table may be seen also the growth of economic demand. The increase of the number of kinds of commodities in each evidences the acquirement of varied tastes by this people of the Hill.

TABLE I. JOHN TOFFEY'S STORE.

Commodities . . . .	1814-16	1824	1833
Costume . . . .	5	25	38
Food and Medicine . .	5	29	36
Tools and Materials . .	5	18	21
House Furnishings . .		18	24
Daily Wage . . . .	\$1.-\$1.50		65c. - 75c.

The above summary of the importations to the Hill in the years 1814-1833 casts light upon the social and religious history of the period in question; in which occurred the greatest social convulsion this community has ever known. In the year 1828 the Religious Society of the Friends was divided, never to be united, the integrity of the community as a social and religious unit was ended, the ties of a century were severed, and instead of the "unity" of which Quakers are always so conscious, came mutual criticism, recrimination, and excommunication of one-half of the community by the majority of the Meeting. Thus ended the communal life of Quaker Hill, and began the disintegration of the community which is now almost complete.

It is true that this schism was general throughout the denomination, in all the United States; and that it was shared in its doctrinal influences by the Congregational churches, the Unitarian Association having been formed in Boston in 1825. But nevertheless it had roots on Quaker Hill in an economic condition; and that economic condition may have been general throughout the Eastern States

Let the doctrinal causes of this schism be considered elsewhere.\* Economic causes are hinted at in the above paragraphs. There came in many embellishments of life which must have seemed to early Friends mere luxuries, and to the stricter few must have appeared instruments of sin, as "beads," "ribbons," velvet, silk, braid, crepe, shawls, dress handkerchiefs, buckles, silk flags, pearl buttons—these are expressions of new states of mind. The economic change underlying the social convulsion is seen in the increase of varied stuffs for costume, articles and materials for the food and medicine cupboards of the farmhouses, and in more varied tools and materials both for industry and house furnishing.

Even more influential than the exciting power of luxuries would be the quieter and more pervasive stimulus of comfort. Houses that are glazed and ceiled and furnished with well adapted implements in every room; tables set with all the wares of leisurely and pleasurable feeding speak a new state of affairs. The people so clothed and so fed begin to produce in every family some members of cultured tastes, some of independent thought, who are restive under the denials of Quakerism.

Business and industry too become more varied; and the effect of this prosperous and varied industry shows itself in active and critical minds. Importation from places beyond Poughkeepsie awakened imagination and invited reflection upon the state of the world.

All this time the daily wage continued to fall, from \$1 and \$1.50 in 1814 to 50c., 65c and 75c. in 1833. It is said that men bitterly commented, in those days of the rapid development of the country, that a farmer who paid a laborer fifty cents for a day's labor in the hay-field from daybreak to dark, would pay the same amount, fifty cents, for his supper on the Hudson River boat, when he made his annual visit to the great city of New York.

\* The matter is fully treated in "Quaker Hill in the Nineteenth Century," by Rev. Warren H. Wilson; Quaker Hill Series of Local History No IV.

We have, then, in John Toffey's daybook a reflection of conditions which had to do with the break-up of the community, as truly as did the theological difference between Elias Hicks and the Orthodox. Comfortable living, diversified and intensified industry, importation of expensive and stimulating comforts, leisure with its sources in wealth, and its tendencies toward reflection, and especially a differentiation of the homogeneous community into diverse classes, owing to lowered wages and multiplied embellishments of life, made up altogether the raw materials of discontent, criticism and division.

These factors go with a state of growing discontent and disintegration. The men and women possessed of leisure cultivated a humanist state of mind, with which arose a critical spirit, a nicer taste and a cultured discrimination. They were offended by literalism, bored by crudeness however much in earnest, and disgusted with the illogical assertions of pietists. The imperative mandate of the meeting awakened in them only opposition. They found many to sympathize with their state of mind.

On the other side there were those who seriously feared the incoming of luxurious ways. They distrusted books, remembering the values of one Book to the laborer who reads it alone; they believed in plainness, and their minds associated freedom of dress with freedom of thought. They resented also the new privileges conferred on some by wealth, because to most had come only harder work with discontent.

The schism which rent the community was an economic heresy, the belief in the use of money for embellishment of life. All the Quakers regarded with favor the making of money. The Liberals, however, saw ends beyond money, and processes of ultimate value beyond administration and business. They looked for household comforts, books, travel, and the leisure with great souls who have written and have ex-

pressed the greatest truths. They believed in a divinity such as could have made, and regarded with favor, the whole teeming world.

The Orthodox saw the values of prosperity only in plainness of life, recognized no divinity in humanized manners, and sternly but ineffectually called the community back to idealized commonplaceness, and to hear the utterances of rude ploughmen and cobblers in the name of Deity.

One ventures to believe, too, that there was a falling away from all religious exercises at this time, and that the pious of both schools were troubled about it, and accused one another. The poor were too hard worked and too poorly paid to feel anything but discontent; and the leaders of the community differed as to the solution of the religious problem. Hence came division.

The Quakers are conscious of religious "unity," but their mode of life is a true economic unity. The Quaker Community was re-arranging itself economically, but the members felt a religious change. Class division was coming upon them, and they felt it as a sectarian division. It was indeed the end of the old community ruled by religion, and the formation of a new neighborhood life; a new Quakerism, ruled by economic classes: the persons of influence being invariably persons of means, and the dominating leaders rich. Doubtless the Quakers who led in the Division of 1828 hoped, in each party equally, to maintain the old religious domination. The community has never granted that leadership to the divided Meeting, neither to the Orthodox, nor to the Hicksites. The real power has, since a period antedating the division, been in the hands of those who have owned farms centrally located; who in addition to owning land centrally located have been possessed of large means: the "rich men" and "wealthy women" have possessed a monopoly of actual leadership. If also, they have been religiously inclined, their leadership has been absolute.

## CHAPTER III.

### RELIGIOUS LIFE IN TRANSITION.

In religion the solidarity of this country place has been best shown in the fact that, during most of its history, it has had but one church at a time. For one hundred years there was the undivided meeting. From 1828 to 1885 the Hicksite—Unitarian, branch of the Friends held the Old Meeting House, with diminishing numbers. The Orthodox had their smaller meeting house around the corner, attended by decreasing gatherings. In 1880 was organized Akin Hall, in which till 1892 were held religious services in the summer only. Since that time religious services have been held there all the year round. The early united meeting had a membership of probably two hundred, and audiences of three hundred were not uncommon.

The church in Akin Hall, named "Christ's Church, Quaker Hill," had in 1898 a membership of sixty-five, and audiences of fifty to two hundred and fifty, according to the occasion and the time of year. In the past the general attitude of the community toward religion has been reverent and sympathetic. It is no less so to-day.

Of religious ceremonies the Quakers claim to have none. But they are fond of ceremoniousness beyond most men. The very processes by which they abolish forms are made formal processes. They have ceremonies the intent of which is to free them from ceremony. The meeting is called to order by acts ever so simple, and dismissed by two old persons shaking hands; but these are invariable and formal as a doxology and a benediction. They receive a stranger in their own way. A visiting minister is honored with fixed propriety. An expelled member is read out of meeting with stated excommunicatory maledictions.

Worship has had on Quaker Hill a large place in characterizing the social complexion of the people. By this, I mean that the peculiarities of the Quaker worship, now a thing of the past, have engraved themselves upon character. Those peculiarities are four: the custom of silence; the non-employment of music, or conspicuous color or form; the separate place provided for women; the assertion and practice of individualism.

The silence of the Quaker meeting is far from negative. It is not a mere absence of words. It is a discipline enforced upon the lower elements of human nature, and a reserve upon the intellectual elements, in order that God may speak. I think that in this silence of the meeting we discover the working of the force that has moulded individual character on Quaker Hill and organized the social life. For this silence is a vivid experience, "a silence that may be felt." The presence and influence of men are upon one, even if that of God be not. The motionless figures about one subtly penetrate one's consciousness, though not through the senses. They testify to their belief in God when they do not speak better than they could with rhetoric or eloquence. It is the influence of many, not of one; yet of certain leaders who are the organs of this impression, and of the human entity made of many who in communion become one. The self-control of it breathes power, and principle, and courage. One would expect a Quaker meeting to exert an imperious rule upon the community. It is an expression of the majesty of an ideal. I believe that the Quaker Hill meeting has been able to accomplish whatever it has put its hand to do. The only pity is that the meeting tried to do so little.

✦ The original religious influence of Quakerism, carried through all changes and transformation, was a pure and relentless individualism. It was the doctrine that the Spirit of God is in every heart of man, absolutely every one; resisted indeed

by some, but given to each and all." With honest consistency it must be said, the Quakers applied this—and this it was they did apply—to the status of women, to the question of slavery, to the civic relations of men. This it was that made Fox and Penn refuse to doff their hats before judge, or titled lord, or the king himself.

The character of the common mind of the community has been much influenced by the fact that the Quakers made no use of color, form and music either in worship or in private life; that they also idealized the absence of these. They made it a matter of noble devotion. In nothing do local traditions abound more than in stories of the stern repression of the aesthetic instincts. One ancient Quakeress, coming to the well-set table at a wedding, in the old days, beheld there a bunch of flowers of gay colors, and would not sit down until they were removed. Nor could the feast go on until the change was effected. So great was the power of authority, working in the grooves of "making believe," that those who might have tolerated the bouquet in silence, as well as those who had sensations of pleasure in it, supported her opposition.

I have spoken elsewhere of the effect of this century-long repression and ignoring of the aesthetic movements of the human spirit, in banking the fires of literary culture in this population. The present generation, all inheriting the examples of ancestors ruled in such unflinching rigor, has in none of its social grouping any true sense of color or of the beauty of color. Neither in the garments of those who have laid off the Quaker garb, nor in the decorations of the houses is there a lively sense of the beauty of color. None of the women of Quaker extraction has a sense of color in dress; nor can any of them match or harmonize colors. I except, of course, those whose clothing is directly under the control of the city tailor or milliner. The general effect of costume and of the decorations of a room, in the population who get

their living on the Hill, is that of gray tones, and drab effects; not mere severity is the effect, but poverty and want of color.

In forms of beauty they know and feel little more. I do not refer to the lack of appreciation of the elevations and slopes of this Hill itself—a constant delight to the artistic eye. Farmers and laborers might fail to appreciate a scene known to them since childhood. But there is in the Quaker breeding, which gives on certain sides of character so true and fine a culture a conspicuous lack in this one particular.

As to music, even that of simplest melody, it has come to the Hill, but it "knows not Joseph." An elderly son of Quakerism said: "You will find no Quaker or son of the Quakers who can sing; if you do find one who can sing a little, it will be a limited talent, and you will unfailingly discover that he is partly descended from the world's people."

The effect of this aesthetic negation appears, it seems to the present writer, in a certain rudeness or more precisely a certain lack in the domain of manners, outside of the interests in which Quakerism has given so fine a culture. This appears to be keenly felt by the descendants of Friends. Not in business matters; for they are made directors of savings banks and corporations, and trustees, and referees, and executors of estates, in all which places they find themselves at home. Nor is it a lack of dignity and composure in the parlor or at the table. Nor is it a lack of sense of propriety in meetings of worship. But it is in matters ethical, civic and deliberate, and in the free and discursive meetings of men, in which new and intricate questions are to arise; in positions of trust, in which the highest considerations of social responsibility constitute the trust; in these, the men and women trained in Quakerism are lacking throughout whole areas of the mind, and lacking, too, in ethical standards, which can only appeal to those whose experience has fed on a rich diversity of sources and distinctions.

In this I speak only of the Quaker group and of those who have been under its full influence. It does not apply to the Irish Catholics, nor to the incomers from the city. The Quakers and their children lack precisely those elements of aesthetic breeding which would be legitimately derived from contemplation and enjoyment of beauty aside from ethical values. Ethical beauty, divorced from pure beauty, a stern, bare, grim beauty they have, and their children and employees have. But they have little sense of order in matters that do not proceed to the ends of money-making, house-keeping and worship. They do not seem to possess instinctive fertility of moral resource. It may be due to other sources as well, but it seems to the present writer that the moral density shown by some of these birthright Quakers, upon matters outside of their wonted and trodden ethical territories, is due to their long refusal to recognize aesthetic values, and to see discriminations in the field in which ethics and aesthetics are interwoven.

They made red and purple to be morally wrong, idealizing the plainness of their uncultured ancestry, and sweet sounds they excluded from their ears, declaring them to be evil noises, because they would set up the boorishness of simple folk of old time as something noble and exalted, "making believe" that such aesthetic lack was real self-denial and unworldliness. It is not surprising that in a riper age of the world, after lifetimes of this idealization of peasant states of mind, their children find themselves morally and mentally unprepared for the responsibilities of citizenship, of high ethical trust and of the varied ways of a moral world, whose existence their fathers made believe to ignore and deny.

Women have always occupied in Quakerism a place theoretically equal to that of the men, in business and religious affairs. George Fox and his successors declared men and women equal, inasmuch as the Divine Spirit is in every human soul.

✓ After the influence of the early Friends ceased, the place of woman began to be circumscribed by new rules, and crystallized in a reaction under the influence of purely social forces; so that this most sensible people made women equal to men in meetings and in religious legislation through a form of sexual taboo.

Following the custom of many early English meeting houses, the men and women sat apart, the men on one side of the middle aisle, and the women on the other, so that men and women were not equals in the individualist sense, as they are, for instance, in the practice and theory of Socialism, but were equals in separate group-life; to each sex, grouped apart from the other, equal functions were supposed to be delegated. Oblong Meeting House, on Quaker Hill, had seats for two hundred and fifty people on the ground floor, and in the gallery for one hundred and fifty more. The men's side was separated from the women's, of equal size and extent, by wooden curtains, which could be raised or lowered; so that the whole building could be one auditorium, with galleries; or the curtains could be so lowered that no man on the ground floor could see any woman unless she be a speaker on the "facing seats"; nor could any young person in the gallery see any one of the opposite sex; yet a speaker could be heard in all parts. The curtains could be so fixed, also, that two independent meetings could be held, each in a separate auditorium, even the speakers being separated from one another.

It was the custom for women to have delegated to them certain religious functions, at Monthly Meeting and Quarterly and Yearly Meetings, on which they deliberated, before submitting them to the whole meeting. This old Oblong Meeting House is a mute record and symbol of the century-old contest of the Puritan spirit among the old Quakers, striving for an inflexibly right relation between the sexes. They attained their ends through the creation of a community, but not until the community dissolved.

✓ The position of woman among Friends is another eloquent tribute to the two-fold "dealing" of Quakerism with women. She is man's equal, but she is man's greatest source of danger. She must be on a par with him, but she must be apart from him. The relations of men and women are therefore very interesting. In doctrinal matters, in discussion, in preaching and "testifying," men and women are equal, and the respect that a man has for his wife or sister or neighbor woman, in these functions of a devout sort is like that he has for another man. Generally the men of the Quaker school of influence believe as a matter of course in the intellectual and juristic equality of women with men; and in the religious equality of the individual woman with the individual man. But in the practical arts and in business a woman is a woman and a man is a man. Here the women are restricted by convention to housekeeping, which on large farms is quite enough for them; and the men have the outdoor life, the "trading," and the gainful occupations—except the boarding of city people. There is no especial respect for the "managing woman" who "runs a farm"; the community expects such a woman to fail.

Moreover, between the sexes there is no camaraderie, no companionship of an intellectual sort between husband and wife, no free exchange of ideas except in circles made up of the members of one sex. In any public meeting the men habitually sit apart from their wives and from the women members of their families, even though the audiences be not bilaterally halved.

The orbits of man's and woman's lives are separate, though each ascribes to the individuals of the other sex an ethical and religious parity. The effect is seen in the diminishing of the numbers of men on the Hill, in the group-life of the women, and in the type of woman. It may be well to consider these in reverse order.

The individual Quaker Hill woman, so far as she differs

from women generally, may be described as a woman almost perfectly conformed to type, presenting fewer variations than elsewhere, either in the form of youthful prettinesses and follies, or in the strenuous opinion of mature years. She is neither a flirt as a girl, nor a radical as a woman. Color has not yet come into her maidenly days, nor violence of opinion into her womanly years. She affects neither fashion nor intellectual eccentricity. Yet she attains to a better average of reasonable, sensible action than she could otherwise do. She knows less of the impulsive, emotional prettiness of adolescence than women of other country communities, and in later years gives herself less to intellectual vagaries. Women's rights are established on the Hill; it is impossible to be strenuous about them.

The numerous groupings and associations of women are especially interesting in view of the fact that the men of the Hill have no associations whatever, now that the stores are closed; and are assembled in no fixed groupings. It has never been possible, so far as records go, to maintain a society of men on the Hill. In the early part of the period under study a literary and debating society was organized, with social attractions; but it was feeble and short-lived. There are not enough leaders among the men to make such group-life possible. They are related by ties of labor, rather than of class-fraternity; and they have never acquired any interest common to their sex to assemble them in groups and companies; the discipline of the religion known to the Hill has discouraged and outlawed it.

This contrast may have something to do with the departure of men from the Hill. So long as the stores were in operation, at Toffey's, Akin's, and Merritt's places, the men could meet there, and had in their assembling a natural group-life, which satisfied many with life in the country. But with the closing of the stores after the coming of the railroad in 1849, this also failed, and the men having no capacity for general association

with one another, and few interests possessed in common with the women, have been the more impelled to leave the Hill. Economic advantage had only to be as good elsewhere, and the man emigrated. I have not known those who have left the place, in my knowledge of it, to give as a reason inability to make a good living there; but always they have spoken most emphatically of the bareness and lack of interest in the social life of the Hill as their reason for emigrating to the city or large town.

## Part III.

### The Mixed Community, from 1880 to the Present.

#### CHAPTER I.

##### DEMOTIC COMPOSITION.

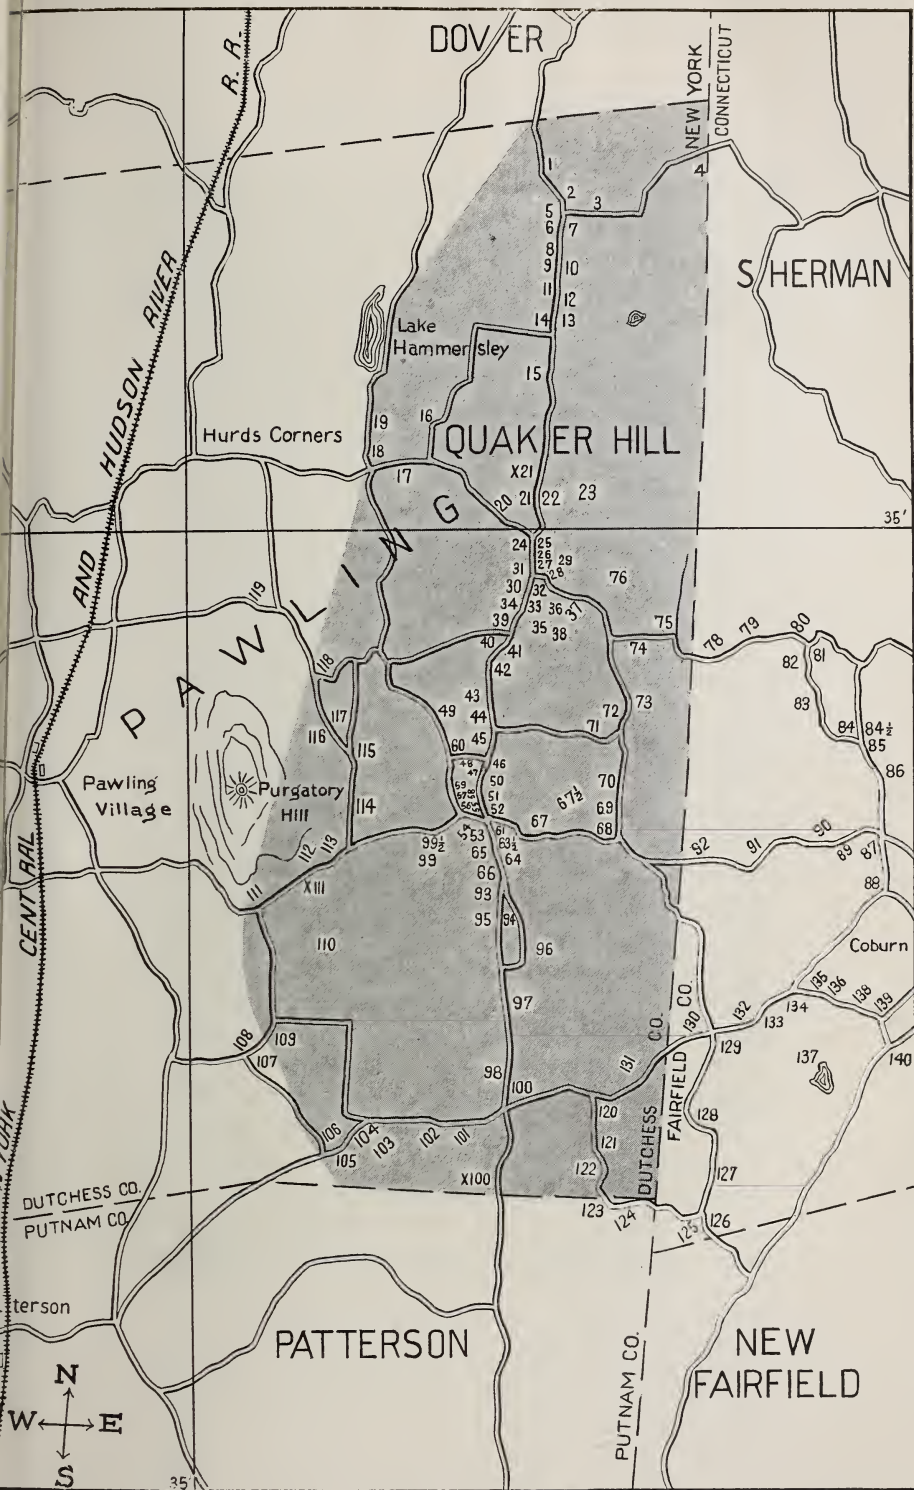

There are ninety-three dwellings on Quaker Hill, as defined above, and illustrated in Map II. The shaded area alone is referred to here as the area proper to the term "Quaker Hill." In these dwellings live four hundred and five persons. This gives a density of population of 26.667 per square mile. In the summer months of July and August there come to the Hill at least five hundred and nineteen more, increasing the density of population to more than 61 per square mile.

There is a steady emmigration from the Hill, due to the departure of working-people and their families in search of better economic opportunities. This has in ten years removed thirty-nine persons. Death has removed or occasioned the removal of twenty-seven more, while only three have been removed by marriage.

Over against this there has been an immigration in the years 1895—1905 of thirty persons; of whom eleven have come in to labor, and nineteen for residence on their own property.

There were resident in 1905 on Quaker Hill the following social-economic classes: Professional men, three; one minister, two artists; wealthy business men, three; farmers, thirty-eight; laborers, forty (heads of houses).

There were fifty-three births in ten years, 1895-1905, of which fourteen were in the families of property-owners, and thirty-nine in families of tenants. There were in these ten

MAP No. II.

QUAKER HILL AND VICINITY.

(Based on a tracing of United States Geographical Survey.)

years thirty-one deaths, of which twenty-five were in the families of property-owners, and only six in those of tenants. Thus the tenant class, bound to the community by no ties of property, contributed 73 per cent. of the births and only 20 per cent. of the deaths, while the property holders suffered 80 per cent. of the deaths and were increased by only 26.4 per cent. of the births. The number of persons in the families of property holders in 1905 was 184, and in those of tenants 221. These are as one to one and one-fifth. This difference is not enough to account for the great disparity in births and deaths between the two classes of families. For, allowing for this difference, births are two and one-third times as numerous in the working and landless class as among the landowners; and deaths are almost three and a half times as many among the landholders as among their servants and tenants.

The present population of the Hill is of a composition which is explainable by migration, and by the effect of the topography of the Hill upon that population. There is every evidence that before the coming of the railroad in 1849 the population was unified, and the community freer of neighborhood groupings. The lists of customers who traded at Daniel Merritt's store, given in Appendix B of this volume, indicates the centering on the Hill of a wide economic life. Every record and tradition of a religious sort indicates that the Oblong Meeting House was also the center of a religious community as wide-spread as the business of the stores. The Hill was one neighborhood until 1828, when the Division of the Meeting occurred; and 1849, when the railroad came to Pawling. It is not now one neighborhood. Three groupings of households may be discerned, roughly designated "The North End," "Quaker Hill Proper," and "Wing's Corners." The second of these, being the territory most under scrutiny in Part III, might again be divided into the territory "up by the Meeting House," and that "down by Mizzen-Top." The

difficulty one experiences in naming these groupings of houses is a token of the indefiniteness of these divisions. They are accentuated by events occurring in the more recent history of the Hill. The older history which shapes the consciousness of the community does not know these neighborhood divisions. Yet the change of the emphasis of travel to the roads running east and west, from those north and south, has separated these neighborhoods from one another. "The North End," therefore, is composed of those households between Sites 1 and 15, who go to the village of Pawling for "trading" and "to take the cars," along the road which passes Sites 16 to 18. They include Hammersley Lake and Hurd's Corners in their interests.

The "Middle Distance," or as I would call it "The Meeting House Neighborhood," is composed of those households from Sites 21 to 41; "the Hotel Neighborhood," of those from Site 42 to 95; and these all, whether regarded as one or as two sections, go habitually to the village by the "Mizzen-Top road," past Sites 99 and 113.

"Wing's Corner" is properly the name of Site 100, but it may serve for a title of the southern neighborhood from Site 122 to 104. From this neighborhood all travel to the valley by the road westward from the "Corners."

The "North End" and "Wing's Corners" are settled almost entirely by Americans, and until within the past two years, by families derived from the original population. "Quaker Hill Proper" is the place of residence of the Irish-Americans. It has been also the place of residence of the last of the Quakers during the period, just closed, of the Mixed Community. It is also the territory in which land has the highest value. Here also are the residences of all the persons of exceptional wealth.

The community most cherishes the central territory, lying upon the two miles of road between the Mizzen-Top Hotel and

the Meeting House, and extending beyond these points and on either hand one-half mile. Within this area land is nominally held at a thousand dollars an acre.

√ “The proximate causes of demotic composition,” says Professor Giddings,\* “are organic variation and migration. The ultimate causes are to be looked for in the characteristics of the physical environment.” The Quaker Hill population, drawn originally from a common source, was in 1828 perfectly homogeneous. The very intensity of the communal life had effected the elimination of strange and other elements, and preserved only the Quakers, and those who could live with the Quakers. Since 1849 this population has become increasingly heterogeneous. It is not yet a blended stock. There is but little vital mixture of the elements entering into social and economic union here. They do not generally intermarry. They are related only by economic facts and by religious sympathies, so that the effect of organic variation does not yet appear among them. But in this chapter the effect of immigration ✓ will be indicated.

The influence of the physical environment is worthy of brief notice. Between one and another of the three neighborhoods lie stretches of land, nearly a mile wide, valued less highly than that on which the clusters of houses stand. In the days before the railroad, the population passed over this territory to the centers of the community in the three stores at Toffey's, Akin's and Muritt's places, and to the Meeting House. But with the necessity of driving westward to the railway, the stretches of road passing poorer land had diminished use, and the clusters of households, once closely related, ceased to interchange reactions and services; so a segregation ✓ of neighborhoods began, which is increasing with time.

The list of members of the Meeting in Appendix A, and that of customers of one of the stores in Appendix B, will serve to show the extent of the community, religious and econ-

\*Descriptive and Historical Sociology, p. 118.

omic, in the eighteenth century. A steady shrinkage has drawn in the margins of this communal life. At this date Quaker Hill receives no tribute from any outer territory; and might be confined to the limits of "Quaker Hill Proper," as some indeed call the "Middle Distance." The present writer, while not so limiting the Hill, has omitted both Burch Hill to the south and the stretches toward Webatuck to the north, which lie in other towns.

✓ Just a word about neighborhood character. There is no especial character localized in the Wing's Corners neighborhood. The central territory has been fully described in this book, and especially in the chapters on "The Common Mind," and "Practical Differences and Resemblances." "The North End" is the most isolated of any neighborhood included within the Hill population. Its families are less directly derived from Quaker stock. The older Quaker families once living there have disappeared. It is a genial, kindly, chatty neighborhood, without the exalted sense of past importance or of present day prestige which affects the manners of "Quaker Hill Proper." It has, moreover, none of the Irish-American residents, and until recently no New York families. The seven family groups resident in these fifteen houses have been long acquainted, and have become used to one another. A kindly, ✓ tolerant feeling prevails. ✓ Gossip is not forbidden. Standards of conduct are not stretched upon high ideals, and a preference for enjoyments shows itself in a greater leisure and a laxer ↑ industry than in the central portion of the Hill.

✓ The greater distance from the railway also forbids some of the activities of "Quaker Hill Proper." The milk wagon which in 1893—1899 was driven each day from Site 1 to the railway, gathering up the milk cans on the successive farms, has been discontinued, and in winter the road between Sites 15 and 21 is often blocked with snow for weeks. The resident at Site 3 has for about twenty years maintained a slaughterhouse and a wagon for the sale of meat, using his land for

fattening cattle and sheep, and selling the meat along two routes. The resident at Site 15 maintains a fish-wagon, buying his fish at the railways and selling at the houses along selected routes, through the summer. The other residents follow the diversified farming, based on grazing, which in this country includes fattening of calves and pigs, raising of poultry and other small agricultural industries. One family only in this neighborhood takes boarders in the summer.

The peculiar religious character of Quaker Hill had by 1880 drawn in its margins to "Quaker Hill Proper," though the population in these outlying neighborhoods had a passive acquiescence in it. They still respond to the activities which are centered in the focal neighborhood. Of themselves, none of these neighborhoods originates any religious activity.

In this connection mention should be made of the Connecticut neighborhood known as Coburn, in which a certain relation to Quaker Hill has always been maintained. It is not here regarded as a Quaker Hill neighborhood. Its characteristics are those of Connecticut, and its traditions are not Quaker, in a pure sense; but Quaker Hill has influenced it not a little, religiously. In Coburn remains a measurable deposit of Quaker Hill population.

Among the changes wrought by the railroad was the introduction of new social elements into the community. The Quaker population had become divided into rich and poor, but all were of the same general stock. The parents of all had the same experience to relate. Their fathers had come to Quaker Hill in the early or middle part of the eighteenth century, had endured together the hardships of pioneer days, had known the "unity" of Quaker discipline for one hundred years, and had held loyally to the ideas and standards of Quakerism.

With the approach of the railroad came Irish laborers, who settled first in the valley below, generally in the limits

of Pawling village, and later came on the Hill as workers on the farms in the new forms of dairy industry to which the farmers were stimulated by the railroad. This immigration continued from 1840 until 1860. In that time, a period of about twenty years, there came laborers for almost all the farmers on the Hill. I am informed that in the decade following the Civil War the work on all the farms, "from "Wing's corner to the North End," was done by young Irishmen.

The first Irishmen of this immigration whose names appear upon the tax-lists of the town of Pawling are Owen and Patrick Denany, who are assessed upon one hundred acres in 1845, the land upon which they first settled being in the western part of the town. These two brothers came before the railroad was extended to Pawling, in 1840. In 1867 Patrick moved to Quaker Hill and bought a place, midway between Sites 128 and 131. Thomas Guilshan in 1858 and years following was taxed upon nine acres, the land upon which his widow still lives, at Site 93. John Brady lived for years at Site 71, and in a house now removed except for traces of a cellar, about fifty feet southeast of the Akin Free Library, lived Charles Kiernan. Among the earliest Irish Catholics came James Cullom and Margaret, his wife, who acquired land at Site 34. Other names of the earlier Irish generations are Hugh Clark, who acquired land at Site 116, James Rooney, Fergus Fahey, James Doyle, Kate Leary, James Hopper, who settled in Pawling or Hurd's Corner, and David Burns, who became a landowner at Site 117.

The Irish Catholics early differentiated into two classes, only one of which, with their children, remains to the present day. There were the "loose-footed fellows," who followed the railroad, worked for seasons on the farms, drifted on with the renewal of demand for railroad laborers, and disappeared from the Hill. Their places were taken, in the years follow-

ing 1880, by American laborers, and a very few other foreigners, of whom I will speak below. The other class of Irish Catholics sought to own land. The details given above indicate their promptness in acquiring interest in the soil. From them has been recruited almost all the present Catholic population of the Hill, which in 1905 amounted in all to twenty-five households and one hundred persons.

Whereas the early immigration of Irish worked in all the dairies from one end of the Hill to the other, the land owned by Irish-Americans now is all in the central portion of the Hill, within a radius of one mile from Mizzen-Top Hotel. Within this mile also all the Irish laborers employed on the Hill are at work. They are employed about the Hotel, on the places of the wealthier landowners of the Hill, and in such independent trades as stone-mason, blacksmith or wheelwright. Only an occasional Irish-American is found among the hired hands on the dairy farms.

In contrast to the indifference of the original population of the town to education, it is worthy of note that the grandson of an Irish-American named above promises at this writing to be the first youth born in the town to graduate from a higher institution of learning, being in his last year at West Point.

✓The Irish population who have remained on the Hill are singularly homogeneous, and thoroughly imbued with the spirit of the place. In the chapter on "The Ideals of the New Quakerism," I have commented on Irish acquisition of a character like that of the Quakers. The gentleness of manner, the quickness of social sympathy and the industrious quietness of the Quakers have come to be theirs. Yet they are loyal Catholics, and with very few exceptions support their Church in the village regularly. Many of them who have not conveyances have for years employed a stage-driver to transport them on Sunday morning to St. Bernard's Church. ✓

This church has been built by the Irish and Irish-Americans. At the time of their coming in 1840-1850, there was no Catholic church, and "if you wanted to hear mass said, you had to drive to Poughkeepsie." Later, a tent was erected for a time, for the Catholic services, then a Baptist church building was purchased. This building was destroyed by fire about 1875, and the present structure in the village was erected.

¶The Catholic population of the Hill is now equal to the Quaker population, there being of each twenty-five households; the old and the new. But each has gone through striking changes since the Catholics came, sixty years ago. "When I was a boy," says a prominent Irish-American, "you could hardly see the road here for the carriages and the dust, all of them Quakers going to the Old Meeting House, on Sunday, or to Quarterly Meeting. ~But now they are all gone." The religious faithfulness of those Friends of two generations ago has descended upon no part of the population more fully than upon the handful of Catholic families, who now drive to Pawling every Sunday in great wagon-loads, while the members of the Quaker households have closed their meeting houses forever.

Of the Irish-Catholic population here described only eleven are Irish born. The rest, about ninety in number, are American born of Irish parents.

¶The other elements who have been adopted into the Quaker Hill population are small in number in comparison with the Irish. They are among the working people, one Swiss, two Poles, who have bought small places at Sites 42 and 75, respectively; and two New York ladies who about 1890 purchased places at Sites 41 and 35, who have become a strong influence, being socially and religiously in sympathy with the original Quaker population. Their influence is described in the chapter upon "The Common Mind of the Mixed Community." Purchases of land have been made in the years

1905-1907, more than in the preceding decade, by persons coming from outside the Quaker Hill population, all of the buyers being from New York City. These purchases are all upon the outer fringes of the Hill territory, at Sites 107, 108, 111, 118, in the southwestern part, and Sites 6 and 10 in the "North End," and in the Coburn neighborhood, Sites 88 and others near the Meeting House, Site 139. The land in the central section has changed hands, in the years 1890-1907, only through the increase in the holdings of those who owned large estates before the period of the Mixed Community.

## CHAPTER II.

### THE ECONOMY OF HOUSE AND FIELD.

The hospitality of the Quakers is worthy of a treatise, not of the critical order, but poetic and imaginative. It cannot be described in mere social analysis. It has grown out of their whole order of life, and expresses their religious view, as well as their economic habits. I showed in Chapter VII, Part I, that the hospitality of the Friends acquired religious importance from their belief that in every man is the Spirit of God. With the simplicity, and direct adherence to a few truths, which characterized the early Friends this belief was practiced, and became one of the religious customs of the Society. They entertained travellers, "especially such as were of the household of faith." They made it a religious tenet to house and welcome "Friends travelling on truth's account."

With equal directness they proceeded further to welcome every traveller, and to endure often the intrusions of those who would not be desired as guests, because they believed that such might be acting by the divine impulse.

The hospitality, therefore, of such a community is very beautiful. For they have their ways of asserting themselves, in spite of non-resistance. They open their doors, they set their table, with a religious spirit. A thoroughness characterizes all their household arrangements, a grace is given to all their housekeeping, which infuses an indescribable content into the experiences of a guest in these homes. Their hospitality to one another has been therefore a powerful enginery for continuing and for extending the domains of Quakerism.

✓ On Quaker Hill the living generations have known this hospitality in two notable ways only, in the Quarterly Meetings,

and in the transformed hospitality of the boarding-house. The Quarterly Meeting is now gone from the Hill. Both the Hick-site Meeting, which was "laid down" in 1885, and the Orthodox Meeting, which ceased to meet in 1905, brought in their day to the Hill, once in the year, an inundation of guests, who stayed through the latter days of a week, and then went their way, to meet quarterly throughout the year, but in other places, until the season came again for Quaker Hill.

The Quaker Hill Quarterly was in August, and "after haying." "The roads were full of the Quakers going up to the Meeting House." In every Quaker home they were welcomed, whether they had written to announce their coming, or whether they had not. All through the days of the Meeting, they would renew the old ties, and discuss the passing of the Society, the interests of the Kingdom, as they saw it, "the things of the spirit."

They meet no more. In the Quarterly Meeting, which comprises the Monthly Meetings of an area comparable to Dutchess County, there are still some Friends, and some meetings which are not "laid down." But they come no more, at "Quarterly Meeting time" to Quaker Hill. Many of the older members are dead. Of the younger members many have only a passive adherence to Quakerism, only sufficient to excuse them from undesirable worldiness, and from irksome responsibility in other religious bodies.

The hospitality of the old Quaker assemblings has passed over into the business of boarding city people. The same table is set, the same welcome given; but to the paid guest.

The passing of the old hospitality of the Friends was illustrated in the years of the writer's residence on the Hill, in the person of an old peddler, known as Charles Eagle. It had been the ancient custom to entertain any and every wayfarer; and Eagle journeyed from South to North about once a month in the warmer seasons, for many years. He had en-

joyed the entertainment of the Quakers, following the ancient line of their settlements along the Oblong, and stopping over night in their ample, kindly households. He carried a pack on his back and another large bundle in his hand. His pace was slow, like that of an ox, but untiring and unresting, hour after hour. His person, sturdy and short, was clothed in overall stuff, elaborately patched and mended. At first sight it seemed to be patched from use and age; but closer inspection showed that the patches were deliberately sewed on the new material. He wore a straw hat in summer, decorated with a bright ribbon, in which were flowers in season. He wore also a red wig, tied under his chin with a ribbon. His face was like that of an Indian, with broad cheek-bones and small shifting eyes.

Eagle was French, and professed to be a refugee, a person of interest to foreign monarchs. On the inner wrapping of his pack was written large, "Vive le Napoleon! Vive la France! Vive!" He had little hesitation about speaking of himself, though always with stilted courtesy, and always furtively.

He made a study of astronomy, and every night would ask his hostess, with much apology but firm insistence, for a pitcher of water, and for the privilege that he might retire early to his room, open the window and view the stars. Strange to say, in this he was not merely eccentric; for his reading was of the latest books on the science, and he exchanged with Akin Hall Library a Young's Astronomy for a Newcomb's, in 1898. He accompanied the presentation of the later book, in which was the author's name inscribed with a note to Mr. Eagle, with a demonstration of a theory of the Aurora Borealis.

Eagle never tried to sell his goods on the Hill, and indeed it is doubtful if he carried them for any other purpose than to conceal his real commodities, which were watches. Of

these he carried a good selection of the better and of the cheaper sorts, all concealed in the center of his pack, among impossible dry goods and varied fancy wares.

An attempt was made to rob him, or at least to annoy him, by some young men; and he shot one of his assailants. For this offence he was, after trial, sent to the Asylum for the Criminal Insane.

His earlier journeys over the Hill found him a welcome guest at the Quaker homes. But the substitution of boarding for the ancient hospitality made the peddler unwelcome; and he passed through without stopping in his later years.

The Quarterly Meeting of the Society of Friends was the annual culmination of the hospitality of the Hill population. Coming in August, "after haying," it was for a century and a half the great assembly of the people of the Hill, and of their kindred and friends; and until the Orthodox Meeting ceased to meet, in 1905, there was Quarterly Meeting in the smaller Meeting House. The old hospitality was never diminished by the Quakers as long as their meetings continued. Even though the same house were filled with paying boarders, the family retreated to the attic, the best rooms were devoted to the "Friends travelling on truth's account;" and the same house saw hospitality of the old sort extended for one week to the religious guests, and of the new sort faithfully set forth for the guests who paid for it by the week.

The Quakeress and daughter of Quakers has produced the summer boarding-house, which is no more than the ample Quaker home, organized to extend the thrifty hospitality continuously for four months, for good payment in return, which has always been extended to Friends and visiting relatives for longer or shorter periods in the past, as an act of household grace.

The Quaker Hill woman is a good housekeeper. The substantial farmhouses on the Hill are outward signs of excellent

homes within. The table is well spread, with a measured abundance, which satisfies but does not waste. The rooms are each furnished forth in spare and and righteous daintiness, over which nowadays is poured, in occasional instances, a pretty modern color, timidly laid on, which does not remove the prim Quakerness. Ventures in the use of decoration, however, have been crude in most cases, and the results, so far as they have been effected by the taste of the woman of the Hill, are incongruous in color, and ill-assorted in design. It is in house-furnishing that the tendency of the daughter of the Quakers shows the most frequent variation. Occasionally one sees the outcropping of a really artistic spirit—peculiarly refreshing because so rare—which has only in a woman's mature years ventured to indulge in a bit of happy color; but the venture if successful is always reserved and simple; and the most of such ventures are of unhappy result.

The housekeeping arts have reached a high degree of perfection on the Hill. Cooking is there done with a precision, economy and tastefulness in sharp contrast to the non-aesthetic manner in which the Quakers conduct most occupations. It is, moreover, a kind of cooking after the Quaker manner, at once frugal and abundant. For of all people, the Quakers have learned to manage generously and economically.

The outcome of this housekeeping is the diversion of much of the business energy of the Hill to the "keeping of boarders." Seven of the old Quaker families, and one Irish Catholic household are devoted to the keeping of boarders; five of them being supported in the main by this business. Of these five families, however, four reside upon farms of more than one hundred and fifty acres apiece. These families sell at certain times in the year, a certain quantity of milk, or make butter, or fatten calves, but not as their central means of support.

To these farmhouses come year after year the same paying guests, each house having its own constituency, built up

through thirty years of patient and unbroken service. The charm of the Quaker character, the excellence of the cooking and the enjoyable character of the other factors of the household, bring patrons back; while the benefits of the elevation and pure air are, to city dwellers, material returns for the moneys expended. For this board, the price charged is, in the Irish Catholic household, five dollars per week; in one of the oldtime Quaker houses, six dollars, and in the others from eight to ten or twelve dollars per week.

The season in which boarders can be secured in paying numbers is a period extending from June fifteenth to October first, with the houses filled only in the months of July and August. For this period, which is one continued strain upon the housekeepers and their aids, preparation begins as early as the month of March. The housework is generally done by the women of the family, with some employed help, of an inferior sort. The horses and carriages on the farm must be used for the transportation of guests, and for hire to those who drive for pleasure. On one farm sheep are kept; though most of the boarding-houses buy their meat supplies of the dealers mentioned below.

Of late years the help employed in these boarding-houses, in addition to members of the family, has come to be negroes from Culpepper County, Virginia. These employees come each spring and return in the fall.

The one Irish Catholic boarding-house is for the entertainment of the hired men on the lower part of the Hill, near the Hotel. It is maintained throughout the year, with a varying number of guests, by a woman ninety years of age, who in addition to the management, does much of the hard work herself.

The conservatism of the Hill families is shown in the fact that the boarding-house business has never been extended. No house has ever been erected for that purpose alone; but the

present business of that sort is carried on in the old Quaker homes, each receiving only as many paid guests as it was used to receive of its hospitable duty, when the Quarterly Meeting brought Friends from afar, once in the year.

Mizzen-Top Hotel is perhaps an exception, if, indeed, a large hotel, with quarters for two hundred and fifty guests, and at prices ranging from three dollars per day up, be an exception. It has grown out of the same conditions which transformed the farmhouses into boarding-houses, save that it has never been managed at a profit, and they never at a loss. It is, however, an institution by itself, and will be treated in another place.

The Mizzen-Top Hotel has always been a sober institution, influenced thereto by the pleasureless spirit of the Hill. Baseball, tennis, and golf in their times have had vogue there, but under every management it has been hard to arouse and maintain active interest in outdoor or indoor sports. The direct road to Hammersley Lake, formerly called Quaker Hill Pond, has made possible a moderate indulgence in carriage-driving. The laying out of the golf links in 1897 set going that dignified sport, just as the Way-side Path in 1880 occasioned some mild pedestrianism. But the Hotel diminishes rather than increases in its play-activities; and only games of cards retain a hold upon the guests, who prefer the piazza, the croquet ground, the tennis court, and the golf links in rapidly diminishing proportion.

Intemperance was common in earlier times, and drinking was universal. Every household made and stored for winter many barrels of cider. Rum and wine were freely bought at the store. Their use in the harvest field was essential to the habits of agriculture which preceded the times of the mower and reaper. This free use of cider, with accompanying intemperance, survives in only two houses on Quaker Hill.

Miss Taber's account, in "Some Glimpses of the Past," de-

scribes the drinking habits of the older period: "It was customary to have cider on the table at every meal, the ladies would have their tea, but most of the men drank cider largely, many to excess, consequently there were great quantities made in the fall and stored in the cellars during the winter. A large farmer would lay out a great deal of work, gathering from ten to twenty cartloads of apples, hooping and cleaning barrels, and many ground and pressed their own cider, then the large casks were drawn to and placed in the cellars. This usually occupied a large part of the month of October. In the spring a portion of the hard cider would be taken to a distiller, and made into cider brandy to be used in the haying and harvest field, at sheep washings, butchering, raisings, shearings and on many occasions. Some was always on the sideboard and often on the table. In most households there were sideboards well furnished with spirits, brandy, home-made wine, metheglin, etc., which were offered to guests. It was a fashion or custom to offer a drink of some kind whenever a neighbor called.

"My grandfather being obliged to have so many men at least two months each year became disgusted with the custom of furnishing so much cider and spirits to the men in the field, as many of them would come to the house at supper time without any appetite and in a quarrelsome mood. There would be wrestlings and fighting during the evening and the chain in the well could be heard rattling all night long. So one year, probably about 1835 or '36, he decided that he would do it no longer. His brother and many of his neighbors tried to dissuade him and prophesied that he would not be able to get sufficient help to secure his crops, but he declared he would give up farming before he would endure it any longer, and announced when securing his extra help for that summer that he would furnish no cider or spirits in the field, but that coffee and other drinks would be carried out and that every

man should have a ration of spirits at each meal. Most of the men he had had in past years came back and seemed to be glad to be out of the way of temptation. The next year he dispensed with the ration at meal times, and the custom grew among his neighbors with surprising rapidity; it was but a few years when it became general, with a few exceptions, where the farmer himself was fond of it, until to-day such a thing is not heard of, and in fact, the farmer, like the railroads and other large corporations, do not care to employ a man that is in the habit of using spirits at all."

In the years 1890-1905 there were only two families on the Hill which followed primitive custom in "putting in cider" into the cellar in quantity for the winter. In five more a very small quantity was kept. In the other cases it was regarded as immoral to use the beverage. The writer was only once offered a drink of alcoholic beverage in six years' residence on the Hill.

In respect to the standard of living which is regarded as necessary to the maintenance of respect and social position, the Hill exhibits two strata of the population. The city people, and the farmers and laborers. The former class, besides the Hotel and its cottages, comprise seven households, who have formed their ways of living upon the city standard. The others, resident all the year round upon the Hill, live after a standard common to American country-people generally of the better class.

The economic ideas and habits are in no way peculiar to the Hill. There survive in a few old persons some primitive industrial habits. One old lady, now about ninety, amuses herself with spinning, knitting and weaving; keeping alive all the primitive processes from the shearing of sheep in her son's field to the completed garment. Axe-helves are still made by hand in the neighborhood.

The practical arts of the community are agriculture, es-

pecially the cultivation of grass for hay, cooking and general housekeeping, and the entertainment of paid guests, as "boarders" in farmhouse and hotel. There is in addition on one farm, at Site No. 3, a slaughter-house, at which beef and mutton and pork are prepared for market, the animals being bought, pastured, fattened and killed on the place, and the meat delivered to customers, especially in the summer months, by means of a wagon, which makes its journey twice a week, over the length of the Hill and in the country eastward.

There is also a fish-wagon owned and maintained by the resident at Site No. 15, which buys fish during the year and maintains by means of a wagon a similar trade. These two are the only food supply businesses maintained on the Hill.

Economic opportunity has always appealed strongly to the Quaker Hill man and woman. In 1740 John Toffey settled at the crossing of ways which is called "Toffey's Corners," and began to make hats. Other industries followed.

In recent years, in almost every Quaker house boarders have been taken, and a better profit has been made than from the sale of milk. For twenty-five years the Mizzen-Top Hotel, accommodating two hundred and fifty guests, has represented notably this response to opportunity. The beautiful scenery, which the Quaker himself does not appreciate, because he has educated himself out of the appreciation of color and form, has offered him an opportunity of profit which he has been prompt and diligent to seize. All through the summer every one of the six largest Quaker homesteads is filled with guests. The fact cited above that in the summer there comes to the Hill a greater transient population than dwells there through the year, a population of guests, illustrates this lively economic alertness.

The emigration from the Hill since 1840 of so many persons, notably the younger and more ambitious, is in itself a token of this response. The railroad brought the opportunity; the

ambitious accepted it; many whole families have disappeared. Their strong members emigrated; the weaker stock died out. The Merritt, Vanderburgh, Irish, Wing, Sherman, Akin, and other families offer examples. In the place of those who departed have come others, to fill the total population. There were in 1905 on the Hill twenty-five old families with seventy-five persons, and twenty-five Irish Catholic families with one hundred persons.

The response to economic opportunity has often been too keen, and the attempt too grasping. In 1891 wealthy New Yorkers offered for certain farms so located as to command beautiful views, prices almost double what they are worth for farming. The reply was a demand in every case of one thousand dollars more than was offered; and the result was—no sale.

Land is valued, though few sales are made, at \$1,000 per acre, near the Hotel. The acre numbered 42, one mile from Mizzen-Top, on Map II, was sold in 1893 to a laboring man for \$250. At 53, land was sold in 1903 for \$700 per acre. At 52, three acres were sold by sisters to a brother in 1895, the asking-price being \$1,000 per acre, and the price paid \$800 per acre. For farming, this land is worth \$50 and \$75 per acre. Four miles further inland as good recently sold for \$10 per acre. Quaker Hill has not neglected its economic opportunities.

Nearness to the soil has, under the influences of Quaker ethics and economic ambition, cultivated in this population a patient and steadfast industry, which expresses itself in the milk dairy, a form of farming by its nature requiring early hours and late, with all the day between filled by various duties. I have shown above that this industry is losing its hold on the farmers of the Hill, but for two generations it has been the distinctive type of labor on the Hill. To rise at four or even earlier in the morning and to prepare the milk, to deliver

it at the station, four to eight miles away, to attend to the wants of cows from twenty to one hundred in number; to prepare the various food-products, either by raising from the soil, or by carting from the railroad,—these activities filled, ten years ago, the lives of one hundred and four of the adult males of the community; and these activities at present fill the time of sixty of the adult males of the community.\*

While "the milk business" is a declining industry, other things are not less engrossing. The land must be tilled, and is tilled. Hay is the greatest crop, and the mere round of the seasons brings for a community used to agriculture a discipline and a course of labor, which make life regular and industrious.

Farming, as stated above, is carried on with a view to the production of milk for the city market. It is a laborious and exacting occupation. The dairy cow, generally of the Holstein stock, or with a strain of Holstein in her blood, is the most common variety; though the grass of the Hill is so good that very rich milk is produced by "red cow, just plain farmer's cow," as the local description runs; and the demands of the middlemen have brought in some Jersey cattle, which are desired, because of the greater proportion of cream they produce. The largest profit from the "making of milk" is secured by those farmers who keep as many cows as can be fed from the land owned by them. But the more ambitious farmers rent land, and in a few cases on a small farm keep so many cattle that they have to buy even hay and corn. It is necessary for the farmer, in order to meet the demands of the city market, to feed his cattle on grains not raised on the Hill. One hundred years ago the lands of the Hill were planted in wheat, rye, corn and other grains, but to-day the farmers buy all grains, except corn, of which an increasing quantity is

\*Mr. E. I. Hurd is my authority for the following statement. "In the total income of the farmers of Pawling, nine dollars are paid them for milk for every dollar in payment for other products."

being raised, and oats, of which they do not raise enough for the use of their horses. There are no silos used on the Hill, the city milkmen having a standing objection to the milk of cows fed on ensilage.

The labor problem created by the milk business is an acute one. One man can milk not more than twenty cows, and he is a stout farm-hand who can daily milk more than twelve or fifteen. As a farmer must keep between twenty and forty cows to do justice to his acreage, on the average Hill farm, there must be at least two men, and often there must be five or six men employed on the farm. To secure this number of capable men, to keep them, and to pay them are hard problems. Their wages have risen in the past twelve years, from fourteen dollars a month and board to twenty-three dollars and board; or for a married man, who has house rent, wood, and time to cut it, garden and time to tend it, and a quart of milk a day, the wages have risen from twenty-eight to thirty-five dollars a month.

These men are recruited from a class born in the country, and of a drifting, nomadic spirit; and from the city, the latter a sinister, dangerous element, whom the farmers fear and suspect. On a large farm, with five men in employ, the farmer may expect to replace one man each month; and to replace his whole force at least once a year. So changeable are the minds of this class of laborers.

Those who are married are somewhat more stable; but of the others it is asserted by the farmers that out of their wages they save nothing.

There has been a rise in the price secured by the farmers for their milk in the past ten years, but it has been only for limited periods. The variation was from 1.9 cents and 2 cents, the price in 1895-98, to 3 cents, the price paid in the winter of 1907. In the summer the price is always lower. The farmers have no control over the price paid them for milk, nor have

they control over the prices to be paid for labor, though of course in this matter, there is room for a certain skill in bargaining and for the lowering of the total wages paid on the farm through the skilfull employment of the cheaper kinds of hands.

There is also a difference in the price paid for milk by "the Milk Factory," a plant established at the railway in the past ten years, in each dairy-town. This establishment takes milk from the poorer dairies under conditions less exacting than are laid down by some buyers, and in consequence pays a price correspondingly lower than the market rates for milk and the higher prices secured by the better farmers.

One energetic farmer, who has in the past five years had large farms to manage, on hire, or on shares, has prepared milk for hospital use in the city, meeting the exactions of inspection, and the prescribed care of stables, animals, workmen and receptacles in a way intolerable to the average farmer. He receives in return a price twenty per cent above the market rate.

The effect of the above conditions is seen in the fact that in the twelve years under study nine owners of large farms have "given up the milk business," have sold their cows, or keeping them have made butter and fatted calves for market. The profits to be made in dairy-farming are so small, unless the farmer conduct his dairy in an exceptional manner, or on a very large scale, that the average man on the Hill cannot continue it. Indeed, the average farmer on the Hill is unable through lack of vitality or incapacity for application, to conduct any business, successfully, against competition. The state of mind of such men, in the worst cases, is illustrated by the remark of one of them who approached a successful dairyman, saying: "I am going to cease to make milk for the city market, and I thought I would come to you and find out something about the way to make butter—not the best butter, such as you make, but a sort of second-class butter."

### CHAPTER III.

#### NEW IDEALS OF QUAKERISM: ASSIMILATION OF STRANGERS.

Quaker Hill has always been a community with great powers of assimilation. The losses suffered by emigration have been repaired by the genius of the community for socializing. Whoever comes becomes a loyal learner of the Quaker Hill ways. I think this is a matter of imitation. Personality has here made a solemn effort to perfect itself for a century and a half; and the characters of Richard Osborn, James J. Vanderburgh, Anne Hayes, David Irish and his daughter, Phoebe Irish Wanzer, ripened into possession of at least amazing power of example. I must be sparing of illustration here, where too rich a store is at hand. I will offer only this striking fact, observed by all who know the Hill: the Irish emigrant and his American-born children, of whom there are now as many as remain of the original Quakers, have come to be as good Quakers in character—though still loyal Catholics in dogma—as if they said “thee and thou,” and wore drab. They are peaceable, gentle folk, sober and inoffensive; and the transforming influence of Quaker character is seen in certain of them in a marked degree.

The same statement may be made of the pervasive example of the Quaker character upon other areas of population; servants who come from the city, summer guests, artistic people who love the Hill for its beauty and suggestiveness, ministers and other public teachers who come hither.

The area to the southeast, called “Coburn,” settled to a degree by those who have worked on the Hill in times past as employees, is touched with the same manner. Its meeting

house, erected over sixty years ago, even retains the Quaker way of seating the men and women apart.

The Quaker Hill Conference, now in its ninth year, is another illustration of the charm and reach of the gentle influence of the Quaker Hill ideal upon personal character.

Suggestion also explains much. In such a social whole, manners and customs are fixed. The newcomer is often fresh, ingenuous, and sometimes intrusive. Little by little he becomes socialized. Ways of action are fixed for him, and a range of performance comes to be his. In harmony with this range, suggestion is very fertile; but one learns after a time that there is a limit to its force beyond which individuals will not go. Suggestion, to be effective upon the many, must come from the sources which embody the community's religious and economic ideal.

Ideas, once broached, are usually, if they contemplate action, opposed, at least by inertness; but after a time they reappear as if native to the minds which would have none of them by reasonable approaches. This process is accelerated if the suggestion begins to travel from mind to mind. Some individuals are less slow than others; and the leaders of Quaker Hill thinking have always been able to work by the plan of academic proposal—to avoid rejection—followed by incitement of popular action in particular quarters. Quaker Hill cannot bear to be divided; and that which comes to be successful in one quarter soon comes to be universal. Things can be done by social suggestion which could never be accomplished by appeal or rational discussion.

The word that has formed the social mind of Quaker Hill has been, not "the Spirit," not "the inner light," but "orthodoxy" or "plainness." For this community, it must be remembered, had no great thinkers. It discouraged study, stiffened reason in formulas and dissolved thinking in vision. To its formulas the Hill has been exceedingly devoted. He who

upheld them was accepted, and he who rejected them, as well as he who ignored them, was to the early Quaker Hill as if he did not exist. ✓

This shibboleth has indeed always been religious. Even to-day the way of direct access to the common heart is a religious one. Catholic as well as Protestant, Quaker no more and no less than "the world's people," welcome religious approaches, respect confessions, and believe experiences. Nothing can assemble them all which does not originate in religion and clothe itself in religious sanction. History is religious history. Business prosperity is approved when the prosperity has followed religious profession.

I do not mean to say that there are not other symbols than those of religion. Prosperity has spoken its shibboleths as well as orthodoxy. "Business is business" on Quaker Hill. Not "to save money" is an unforgiven sin—and a rare one!

Much has been done in forming the common mind of Quaker Hill by antipathies and sympathies, chiefly again of a religious order modified by the economic. The community is markedly divided into rich and poor, and into orthodox and not-orthodox. These have no inclination one to another. Each group has its symbols and pass-words, and while neighborly, and answering to certain appeals to which the community has always responded, each resident of the Hill lives and dwells in his own group and has no expectation of moving out of it. So long as a man stays in his group he is, by a balancing of antipathy and sympathy, respected and valued. If he venture to be other than what he was born to be, he suffers all the social penalties of a highly organized community.

Authority, working along the lines of belief and dogma, has almost irresistible force for the Quaker Hill social mind. A visitor to the Hill said "These are an obedient people." Any barrenness of the Hill is to be attributed rather to the lack of leaders who could speak to the beliefs and in harmony with

the dogmas, than to lack of willingness to obey authority. From the past the families on the Hill inherit their willingness respectively to command and to obey. This is true socially of certain families and religiously of others. That to-day some are not led is due solely to the decadence of initiative in the households which, by reason of wealth or dogmatic rectitude, inherit and claim the first place.

It was said above that Quaker Hill has shown great power of assimilating foreign material, and of causing newcomers to be possessed of the communal spirit. The agency which from the first accomplished this was religious idealization, embodied in the meeting, the dress, language and manners of Friends. Generally the Meeting was recruited from births, and members were such by birthright. In former times the community and the Meeting were one. This assimilating of foreign material by social imitation to the Quaker type, and into organic subjection to the Quaker Hill community, was wrought by six agencies. They were language, manners, costume, amusements, worship, and morals. In each of these the Quakers were peculiar. In the use of the "plain language" the Quakers had a machinery of amazing and subtle fascination for holding the attention, purifying the speech, and disciplining the whole deportment of the young and the newcomer. No one has ever been addressed with the use of his first name by grave, sweet ladies and elderly saints, without its beginning an influence and exerting a charm he could not resist; the more so that the Quaker in so doing is guarding his own soul, rather than seeking to save his hearer.

The grave manners of the Quakers, both in meeting and without, are framed upon their belief that all days are holy, and all places sacred. Their long and triumphant fight against amusements is a tribute to the gravity of life. The contest to which I have elsewhere referred for pure morals, in matters of sex, of property and of speech, was a victorious battle.

In all these matters Quaker Hill was a population socialized by religion. Central to it all was the worship of the Meeting on First Day, and on other occasions; and the great solemnity of the annual Quarterly Meeting. Fascinated by that "silence that can be felt," men came from far. They would come as readily to-day. They went away under the domination of that idea of pure and spiritual faith, which kept a whole housefull of men silent for an hour in communion.

As I have looked into this matter it has seemed to me that the induction to be drawn from the history of Quaker Hill is this: Religion was a true organizing power for this social population. Whatever the meeting determinedly strove to do it accomplished. If it had tried to do more it would have succeeded.

This was a gain, moreover, without corresponding losses; a total net gain in all the moralities. The whole area on which this meeting exerted its influence was by it elevated to a higher moral and social tone, and organized into a communal whole, characterized by a loftier and cleaner standard than that of surrounding populations.

Why, then, did it die out? First, because of the bareness of its worship, the lack of music, color and form; through which it lost in the nineteenth century some of its best families. Then through dogmatic differences, of no interest to human beings, it lost its primacy in the community and so its authority.

In the chapter on "Ideals of the Quakers," I have dwelt upon their dramatization of life. They "made believe" that "plainness" was sanctity. They fixed their minds upon the commonplace as the ideal. It is probable that the early population were men and women of no such talents as to disturb this conviction; and the variations from plainness in the direction of gayety were sternly denounced as immoral. Also the struggle with the wilderness occupied and exhausted the

powers of the exceptional as well as of the average man. But when with wealth came leisure, there were born sons of the Quakers who rebelled against the discipline of life that repressed variation, who demanded self-expression in dress, in language, in tastes, and in pleasures. Gradually but surely, as the outside world was brought nearer, these persons were influenced in their restiveness by books and examples, by imitation and other stimuli from new sources, until they cast off in their minds the Quaker ideal of plainness. To be ordinary no longer seemed to them a way of goodness. They were oppressed and stifled by the ban of the meeting upon variation. And though the ideal of plainness has subtly ruled them even in their rebellion and freedom, it has done so by its negative power, in that the community has never furnished exceptional education. The positive dominion of the meeting broken, the negative "plainness" of the community rules all the children of the Hill to this day. So few are the sources of individual variation furnished, in the form of books, music, education, art, that no son or daughter of Quaker Hill has attained a place of note even in New York State. The ideal of "plainness" has been an effectual restraint.

## CHAPTER IV.

### THE COMMON MIND.

The common mind has been formed to a great degree by strong personalities; for the common mind has held an ideal of perfection in a person. The force which at the beginning assembled its elements was personal. The type represented by George Fox, as interpreted by Barclay, embodied this influence. In all the history of the place response to strong personality has been immediate and general. The past is a history of names. William Russell led the community in erecting a Meeting House, and then a second one—which still stands. Ferriss, the early settler, located the meeting house on his land, as later Osborn located the Orthodox Meeting House, at the Division, on his land. Judge Daniel Akin, in the early Nineteenth Century, was a leader of the economic activities of this Quaker community, then differentiating themselves from the religious. So, too, his nephew, Albert Akin, in the last half of that century was a leader, gathering up the money of the wealthy farmers to invest in railroads, founding the Pawling Bank, the Mizzen-Top Hotel, and launching Akin Hall, with its literary and religious basis.

David Irish, the preacher of the Hicksite Meeting in the middle of the nineteenth century was leader and exponent of the most representative phases of Quakerism, for at that time it was still possible for the business and the religion of Quakerism to be united in the minds of the majority; Unitarian Quakerism was the result, and of this David Irish was the ideal embodiment.

The respect paid by the community to leadership is shown in the place assigned to Admiral John L. Worden, commander of the "Monitor," who married a Quaker Hill woman, Olive

Toffey, spent the summers of his life on the Hill, and is buried in the Pawling Cemetery. There was universal pride in his charming personality, interest in his sayings, and no pious condemnation of his warlike deeds. His nautical names of the high points on the Hill have been generally accepted; so that the Hill rides high above all surrounding lands, her heights labelled like the masts of a gallant ship: "Mizzen-Top," "Main-Top," "Tip-Top."

There is indeed by contrast a corresponding unwillingness to be impressed by great personality. The residence of Washington with his troops in the neighborhood left no impression on the records of the Meeting, though he turned out the worshippers and filled the place with sick soldiers; no impression upon the devout tradition, except the story of his being seen once in the woods alone on his knees in prayer; and no impression upon the social tradition, except the cherished claim of one family that he used their residence as his headquarters. Washington was the embodiment of all that this community opposed, and he was ignored.

Another instance of grudging allegiance was the following given to a New York broker, who set out to build a modern schoolhouse, and was permitted only by a packed school-meeting, and by paying two-thirds of the expense himself, to build in 1892 the comely structure at 43, with which Quaker Hill is content.

The same resident was discouraged from further acts of public service, in 1894, by the declining of his offer made to the town of Pawling, to build one mile of macadam for every mile built by the town. He had constructed in 1893, at 113, a sample piece of such road, covering at his own expense an ancient sink-hole in the highway, through which during two months in every year for a century and a half Quaker Hill had wallowed; and he desired with this object-lesson to convince the town,—to win the support of at least his neighbors,—

to the proposal to transform the highways into good roads. But there was never a response. and even his neighbors on the Hill, who cheerfully enjoy his smooth stretch of stone road over the ancient wallow of their fathers, manifested no active appreciation of his generosity. The generous resident had purchased a stone-crusher and other necessities for the work; but they have been used only on private grounds.

The most conspicuous instance of following leadership in recent times has been the measured devotion given by the community to the activities which have centered in Akin Hall and in the institution known as Hill Hope, on Site 35. The leaders in this activity have been themselves under the influence of New York city ideas. Two of the three most conspicuous persons are of this neighborhood, but have resided in New York for years, returning to the Hill for the summers. The third is a New Yorker by birth, and trained in Presbyterian religious experience and especially in charitable activity.

Akin Hall has in the years 1892-1905 expressed the leadership in religious confession and worship, after the forms of the Reformed Christian order, and has embodied this leadership in the conventional activities of a vigorous country parish.

For ten years Hill Hope, supported personally by the third member of this group of leaders, was, until it was closed in 1904, a country home for working girls. By a liberal policy it became also a center of much interest and of a pervasive influence to the neighborhood. Meetings of a social and devotional character were held there, to which the residents were pleased to come, and in which the young women from the city met and mingled with the Protestant residents of the Hill, especially with those of the Quaker stock. The influence of Hill Hope was very marked, and its power in representing to people of a narrow experience the ideals of a richer and broader life was obvious to any one who saw the place it held in the interests of the whole resident community.

These influences, thus compounded of the humanitarian, the liberal-orthodox and the devotional, but in all things confessedly religious, exerted themselves for the ten years named, unbroken. The death of one member of this group of leaders, the head of one of the three households peculiarly identified with its work, appreciably weakened the group. But in the thirteen years of its influence, it united the whole community in the formation of a church, to some of whose services came all the Protestant population; in whose membership were representatives of all groups of the Protestant residents; and which was able at least once a year to call the Catholics also together at Christmas festivities.

To this group of leaders a guarded, though at times cordial following was given by Orthodox Friends, the Hicksite group, the farmer class, laborers, Catholics and Protestants, and summer people. It was generally inert and negative in spirit, seldom actively loyal. At its best it was willing that leaders should lead and pay the price, and be more admired than upheld. At its worst it was alert to private and blind to public interests, peevish of change, incapable of foresight.

I do not think that Quaker Hill people have much expectation of benefit from social life. They are habitually skeptical of its advantages, though eager to avail themselves of those advantages when proven. Almost every person on the Hill, however, is a member of some secret society, to which he is drawn by anticipations of economic advantage, or of moral culture.

Nor can I say that there is prompt or general reaction to wrongdoing, either of one or of many. I might illustrate with two cases. In one a rich man perverted a public trust, openly, to his own advantage; and a conspiracy of silence hedged his wrong about. In the other, a youth entered in one winter every house on the Hill in succession, and there was no one to detect or to punish him.

✓ The Hill does not exhibit the highest type of social response in the recognition of impersonal evil, in the quest of knowledge, or in free discussion. Almost two centuries of dogma-worship, with its contemplation of selected facts, has made it now impossible to secure from one thoroughly socialized in the spirit of the place the exact truth upon any matter. It seems to be reserve which conceals it, but it is rather the effect of continued perversion of the sense of right and wrong, and indifference to knowledge for its own sake. —

☐ The ideal of the common mind of Quaker Hill is the practice of inner and immaterial religion. It looks for the effects of certain dogmas, effects expressed in emotions, convictions, experiences. The ideal contains no thought of the community or of its welfare. It is purely individual, internal and emotional.

It was expressed in the comment of one excellent representative citizen upon another, "He does not seem to me to be the man he once was. He does not say in meetings the things he used to say. He used to be very helpful in his remarks." This was said at a time when the citizen commented on was laboring heroically for a public improvement by which the citizen speaking would chiefly be benefitted.

The Quaker Hill man and woman desire to make money. They instinctively love money, though not for any other purpose than saving. They cherish no illusions of an unworldly sort about it. This is true of Quaker and Catholic, laborer and summer resident. It is true of the small class of cultivated intellectual-aesthetes, who might be expected to be less mercenary. They all value money; but not for display, not for luxury, scarcely for travel; not for books or the education of children. Quaker Hill men and women would accumulate money, invest and manage it wisely and live in respectable "plainness." This characteristic is written largely over the whole social area. It is an instinct.

The emotional nature of this population has been by long-continued application of an accepted discipline, economic and religious, restrained and schooled. More beautiful personalities than some of the Quaker and Irish women of the Hill, schooled in a discipline which produces the most charming manners, the gentlest kindness, one may never see. There is no cloud in the sky of these women's justice, truthfulness, goodness. One may remember, even with them, a day of anger, of indignation; but it was a storm restrained; the lightnings were held in sure hands, and the attack was eminently just.

But this very discipline has resulted, in other persons, in an explosive emotionality. One person suffers this explosion in a periodic lawsuit—a rare action for the Hill; another in an almost insane family quarrel, another in an occasional fury of futile violence, another in periods, increasing in frequency as he grows older, of causeless and uncontrolled anger, or extravagant grief; and when weightier occasion is lacking, in torrents of language poured forth from the treasuries of an exhaustless memory. The very serenity and placidity which Quaker worship and industry produce in the true Quaker have resulted in the emotional ruin of some, and in the subconscious volcanic state in others.

Strange to say, the immigrants, Irish and American, have in this conformed to the better type; so that gentle manners, placidity of character and restraint of emotion may be said to prevail among them.

As for judgment, on economic questions and matters of benevolence the judgment of Quaker Hill people is sound. They use money sanely and with wisdom. They act wisely in matters of poverty and need, or appeal on behalf of the dependent. On other matters, outside the range of the social discipline in which the community has been to school, not so much can be said.

The judgment of the community is not determined by evidence in any other matters than economic. The Quaker Hill mind works subjectively on the lines of instincts and habits inherited and inbred. Auto-suggestion has been a great force in this community. Men and women have had an impression, "a leading," believed to come from the Divine Spirit, and have acted upon it and have led others with them. So that the prevailing determination of the social judgment has been by personal suggestion, and the appeal of inner convictions, fortified by alleged divine influence. It must be said that this is a disappearing habit. Even those born Quakers, now that the Hicksite Meeting has been discontinued since 1885, and the Orthodox since 1903, and the Quarterly Meetings of both societies have ceased to come to the Hill, do not so often see visions or act upon "leadings." The influence of non-Quakers in the place has been of late to quarantine such "leadings" and prevent social contagion.

Frugality is universal. Almost every resident laboring man has a bank account. Indeed, these laborers have done more in saving than have the farmers. But the tastes of all are simple. Clothing is never showy or expensive, and house-keeping is carried on with the most sparing use of purchased articles.

Cleanly most of the people of the Hill are, in person and in their care of house and grounds, of carriages, horses and other properties. The houses and barns are always freshly painted, and an appearance of neatness pervades the community.

For reasons which I will mention in a later paragraph the men and women trained under Quakerism are not orderly, either in the use of their time or in the management of their labor, or in anything, save in the discipline of their religion and in the economic system to which they give themselves. ✓

✓ The community has grown in compassion since the days

when Surgeon Fallon's soldiers were starved and neglected in the Meeting House. To-day I am sure no class of men in real need could appeal to the community, or to any constituent group of it, in vain. The growth has been along lines which, beginning in a group-compassion that has from earliest days recompensed any poor member of the Meeting in his sudden losses of property, have widened first to Quakers of other places, then to other Christians, then to other men, and last of all to Quakers of the other Quaker sect; and from Protestant to Catholic and Catholic to Protestant.

Property seems to be sacred. Doors of houses and barns do not require locks, but one winter there was a series of house-breakings, in which almost every summer residence on the Hill was entered. Contents were inspected, but nothing was stolen. But the honesty here is a passive honesty. It is not the aggressively just fulfilment of obligation which one finds in New England.

The Hill is a community with a high level of chastity. This may be said of all classes, though not uniformly of all. Yet it was not always so. The first century of the life of the Quakers here is recorded in the minutes of Oblong Meeting as one long struggle of Quaker discipline against unchastity. There is an amazing frankness about these records, and a persistence in the exercise of discipline, a frequency of accusation, proof, conviction, expulsion from the Meeting, which is astonishing to the twentieth century reader. The best families furnished the culprits almost as often as they supplied the accusers and prosecuting committees. So many are the cases and so frequent the expulsions, often for matters which might better have been ignored, but generally for substantial offences, that one wonders who was left in the Meeting. But men often confessed and were received again, and the Meeting held its ground. In general it may be said that often in the eighteenth century there were more cases of unchastity dealt with in a

year by the Meeting, in a population no larger than the present, than have come to public knowledge in the past ten years in this community. The change shows also in a reserve of speech upon these matters.

↓ The characteristic pleasures of the community, as a whole, are few. There is a group of women of leisure, of course, devoted to bridge-whist, who come in the summer and do not go far from the Hotel. Young men go hunting, and a few grown men are fond of fishing. The typical person provides himself with no pleasures outside of his family and home. Men and women are too busy to play, and the Quakers educated themselves out of a playful mind.

↓ There are a few pleasures which are native and general. One of these is public assembly, with an entertaining speaker as a central pleasure. Quaker Hill audiences are alert and keen hearers, and indulgent critics of a public speaker. There are only two other forms of public entertainment more pleasing to them. The first is a dramatic presentation. Many of the Quakers are excellent actors, and the Irish are quite their equals, while the other newcomers are equally appreciative. The Christmas play in Akin Hall is a great annual event, assembling all the people on the Hill of all classes and groups, for it embodies very many of the appeals to characteristic pleasure. Only one other attraction is more generally responded to; I refer to a dinner. Something good to eat, in common with one's neighbors, in a place hallowed by historic associations, under religious auspices—here you have the call that brings Quaker Hill all together. On such a day there will be none left behind.

↓ Of all these sorts is the attraction the Quaker Hill Conference has for the people of the neighborhood. It is a universal appeal to the capacity for pleasure in the community. It presents famous and eloquent speakers through the days of the week. Matters of religion, farming, morals, literature, are

discussed, by men of taste and culture; and the closing day is Quaker Hill Day. On this day, after an assembly in the old Oblong Meeting House, erected in 1764, at which the neighborhood has listened to papers descriptive of the past of the Hill, all adjourn for a generous dinner under the trees of Akin Hall, or latterly under a tent beside the Meeting House, partaken of by four hundred people, of all groups and classes, and followed by brisk, happy speeches by visitors present. This, after almost two centuries of keen interest in the question of amusements, is the last and most perfect expression of the capacity for amusement in the community.

✓ Of active pleasure-taking, Quaker Hill, purely considered, is incapable.

It should be said that the Roman Catholic Church in Pawling provides its people with a yearly feast, parallel with the Conference, which was for years held in a grove on the borders of Quaker Hill.

Traits of character which are general or even common among Quaker Hill people are worthy of mention under the heads of regular industry, frugality, cleanliness, temperance, chastity, honesty as to property, and compassion.

Politically the Hill was until the year 1896 inclined to be Democratic. For years a number of the Protestants on the Hill have been Prohibitionists.

Primitive notions of morals survive in spite of what has been said earlier, in isolated instances, or tend to recur in certain families. Until twelve years ago members of certain families maintained the right to catch fish with a net in Hammersley Lake. Over the line in Connecticut this practice, and that of taking fish with a spear, survive in spite of law. But this primitive method was forcibly ended by the attempt to arrest the chief offender. He made his escape from the officers, but has never returned, and the practice has not till this date, 1905, been resumed on Quaker Hill.

Primitive moralities of sex appear in certain families, in which in each generation there appears one illegitimate child, at least; as it were a reminder of their disorderly past. The chari-vari survives among the better class of working people, a strange, noisy outbreak for a Quaker community, with which a newly married pair are usually serenaded.

I find also no animistic ideas, or practices; no folk-lore and no magic. The Quaker Hill imagination has been disciplined.

The preferred attainment in this community is neither power, splendor, pleasure, nor ceremonial purity; nor yet justice, liberty or enlightenment; but rather, first of all, prosperity, a well-being in which one's good fortune sheds its favors on others; secondly, righteousness, to be enjoyed in religious complacency; and thirdly, equality. This last is one of the few elements of a social ideal actually realized. Even among the women of the place there is a simple and unaffected democracy in the religious and communal societies, which is quite unusual in such a place.

Of sacred places there are avowedly none. But the historic sense of the community is reverent, almost religious, in its regard for the past; so that the Oblong Meeting House, cradle of the community, and for over a century its home and house of government, is chief in the affections of all. In the summer of 1904 this place was marked for all time by the placing there of a boulder of white feldspar, bearing a bronze tablet inscribed with the important facts of the history of that spot.

Quaker Hill does not desire to expand. The type of community preferred is the simple, small, and exclusive. In this all agree, whether they confess it or not. No expansion will ever come by native forces or conscious purpose.

Quaker Hill reveres leaders, not heroes; and not saints, for men have been cherished for their leadership in dogmatic

activities, rather than for their abstract goodness or human value. The type of the social mind that has been most esteemed is the dogmatic-emotional. Even Albert J. Akin, whose dogma was the union of all Christians, had no patience with any divergence in religious experience from this, his dogma.

The forms of complex activity that are chiefly cherished are, first, the economic arts; second, religion; third, morals; and fourth, things pertaining to costume. The institutions chiefly prized are the family and marriage, the economic system and the cultural system, especially the church.

Social welfare is conceived of under forms of peace, the increase and diffusion of wealth, industry, and by a minority, culture. High morality is most valued as an element in the social personality. Next after it is a highly developed sociality. Social policies would be favored on the Hill as they represented authority and individualism. Conversion is the accepted means of modifying type.

Practical politics may be said to be foreign to Quaker Hill, for reasons drawn from its isolation and religious offishness. An exception was in the early part of the nineteenth century, when Daniel Akin, apparently in consequence of mercantile position, was elected County Judge. After him, his brother Albro was appointed to the office.

The consciousness of kind on Quaker Hill is stronger in the group than in the community. Yet the general sense of "unity" is very strong and it often comes into play.

The chief social bonds which unite the whole community are, first of all, imitation, in which process it seems to me the Quakers are a peculiarly subtle people. Second, a good-will which pervades the Hill like a genial atmosphere; Third, kindness, which on certain occasions draws the whole community together in unusual acts of helpfulness to some member in need.

## CHAPTER V.

### PRACTICAL DIFFERENCES AND RESEMBLANCES.

The prevailing type of mind among Quaker Hill folk is the Ideo-Emotional; for these folk are a gentle, social sort of persons, ready of affection, imaginative and analogical in mental process, weak and complacent in emotionality, with motor reaction rather inconstant, and of slow response. Of these I find thirty-seven families.

The next category is that of the Dogmatic-Emotional, in which I observe twenty-two families. These are composed of persons in whom austere and domineering character proceeds from a dogmatic fixity of mind, and expresses itself in the same inconstant application shown by the former class.

A few of the more notable of the personalities produced by Quaker birth and breeding belong, I think, in the Ideo-Motor class. I find only seven families of that type, but the forceful character, of aggressive bent, moderate intellect and strong but well-controlled emotion, is distinctly present; and this class has furnished some of the most successful of the sons of Quaker Hill.

I have known only six persons resident on the Hill in the twelve years under study who could be described as Critically-Intellectual. Of these, four have been bred in the larger school of the city, and only two have lived their lives upon the Hill. Of these six, five are women.

There is, of course, only one language spoken on Quaker Hill. Indeed only one or two persons have any other than English as their native tongue.\* And very few have acquired any other as a matter of culture. The vocabulary used is limited. An intelligent observer says: "The vocabulary of the native community is the meagerest I have ever known, except that of

\* In 1905-7 six Swedes and Poles also have come, as laborers.

the immigrant." There are, however, very few illiterates; none, indeed, in the literal meaning of the term.

Manners on the whole are uniform for the resident population. Of course the summer people have the conventional manners, or lack of manners, of the city. So far as religion has shaped the manners of the old Quaker group, they are often gentle and refined; but as often blunt and imperious. The Irish have the best manners, I observe, and the more transient summer people and farm-hands the worst. In both the last two classes there is too often a pride in rudeness and vulgarity which the native of mature years never exhibits. The Quaker and the Catholic are equally ceremonious in inclination. The latter always desires to please. The Quaker, when he desires to please, is capable of very fine courtesy; but he does not always desire, and he has less insight into the essence of a social situation.

The community has had a history, of course, in the matter of costume. The Meeting House law made costume a matter of ethics for a century. But to-day there is great diversity. Probably this is a sign of the transition from the Quaker to the broader human order. But all one can say upon costume is that there is now no dress prescribed for any occasion. At one extreme there are a few, in 1905 only three, in 1907 only one, who wear the Quaker garb. At the other extreme are outsiders who dress as the city tailor and milliner clothe them. And between these there is liberty.

The dispositions again are varied. One finds the aggressiveness of five stirring men and three capable women sufficient to give character to the place. Many functions of the community are still vigorously upheld, yet the number of aggressive spirits is diminishing. The instigative type is present in three, and its processes give pleasure to all who behold. The domineering type is present in eight members, especially in those families which claim by right of inheritance either

social or religious leadership. And, as to others, as I quoted an observer above, "They are an obedient people." I do not know any creative minds, much less any class with original initiative. If there had been any such, Quaker Hill would have produced artists, great and small, and writers, not a few. There is a consciousness of material for creation, and in certain families the culture which creation presupposes; but something in Quakerism has quieted the muse and banked the fires.

As to types of character, there are forceful persons, a very few, nine at the utmost being of this type. Austere persons, who have in the past given to the Hill much of its character, have almost disappeared, not more than four being within that category, among the population under study in this part of the book.

The number of the rationally conscientious is as small as is that of the convivial. The Meeting, which was for over a century the organ of conscience for the community, denied to the convivial their license, and released the conscientious from any obligation to be rational. The Meeting has now but recently passed away, and its standards of character speak as loudly as ever. I find three women who may be called rationally conscientious, one a Quakeress, one a New Yorker, and one of Quaker birth and worldly breeding. I find also three who are truly convivial in type, one a son of Quakers, and two who are Irish Catholics; while to these might be added two whose designation ought to be Industrious-Convivial, hard-working men who are fond of social pleasure as an end of life.

A few in certain households, three in number, are intellectually aesthetic in a passive way, fond of art and books, but creating nothing. Two artists of note have in the past twelve years come to the Hill, bought places and made it at least a summer home.

It must not be inferred from the foregoing that there is

not a wide range of mental difference among Quaker Hill men and women. In the matter of quickness and slowness of action this variation appears even among the members of any one group. In the same family are two brothers, both farmers, both tenants. One is able to farm a thousand acres more successfully than the other can cultivate two hundred. The one is instant in judgment, swift in action, able to compress into an hour heavy physical labor and also the control of many other men. The other is leisurely, indolent in movement, though a diligent man, and is as much burdened by increase of responsibilities as the former is stimulated. These two men are not exceptional, but typical. The extreme of slowness is indeed represented in one man whose tortoise pace in all matters dependent on the mind and will is oddly contrasted with his vigor and energy of manner. His movements are a provocation of delighted comments by his neighbors; I think partly because they are felt to be representative of what is latent in other men, and partly because he is surrounded by others more alert. Such men are the outcropping of a vein of degenerate will. It is not immoral degeneracy, but its weakness is incapacity for action of any kind, inability to see and do the specific task. This degenerate will does not extend to traditional morals, and does not always affect whole families. But its pervasive effects are seen in almost all the representatives of three large families of the old Quaker stock. Contrasted to these are some of the old stock, who though slow of thought and barren of mental initiative, are swift of action, sure in synthesis of a situation, and instant in performance of precisely the requisite deed.

One finds on the Hill many examples of native administrative ability of a high order—for a farm is as complicated a property as a railway is. There are fully as many others who would be burdened with the cares of a ticket-chopper.

Not a few on the Hill are like the farmer who, sent on an

errand to bring some guests from a train to a certain house, spent half an hour after meeting the guests in conversation with them in the railway station before mentioning his errand; and would have made it an hour had they not inquired of him for a conveyance. Yet a neighbor of his, in the same social group, closely related, has unusual capacity for affairs.

The instincts of the people of the Hill are not, I think, so varied. They involuntarily respect religion, when expressed with sincerity, and incarnated in strength of character. It must have the authority, however, of strength, at least passive strength, to appeal to local instinct.

## CHAPTER VI.

### THE SOCIAL ORGANIZATION.

The members of the community have organized themselves into associations for the carrying on of special forms of activity to a degree which is worthy of record. As one might expect, the societies of most vigor are those maintained by the women, since the men have never been able spontaneously to organize, or to maintain, any society on the Hill.

Central to all this organization, through the period of the Mixed Community, has been Akin Hall Association, created by one man, and endowed by him. Under its shelter a church and library live, and a yearly Conference is maintained for five days in the month of September. In this chapter we will consider first the incorporated, then the unincorporated societies.

The chief incorporated institution on Quaker Hill is Akin Hall Association, founded in 1880 by Albert J. Akin. It was his intention to create an institution of the broadest purpose, through which could be carried on activities of a religious, literary, educational, benevolent and generally helpful order. "Albert Akin endowed," said a visitor, "not a college or a hospital, but a community!" The charter of the Association, which was from time to time, on advice, amended, up to the time of Mr. Akin's death in 1903, provided for the most catholic endowment of Quaker Hill, in every possible need of its population.

The particular directions in which this endowment has been used are two. A library and a church are in active use by the neighborhood, the former since 1883, and the latter since 1895, of which I will speak in detail hereafter.

Akin Hall Association is a corporation consisting of five

trustees, a self-perpetuating body, and eleven other "members." The number of trustees was originally sixteen, but Mr. Akin early yielded to legal advice in concentrating authority in five persons; while continuing the remaining eleven as a quasi-public to whom the five report their doings, and with whom they regularly confer. The annual meeting of the Association is upon the birthday of the founder, August 14th. At that time the trustees assemble at two p. m. for the transaction of business, election of members and of officers; and at 3 p. m. the members' meeting is called to order, the officers of the trustees being officers of the whole body. Members are permitted and expected to inquire as to activities of the Association, its funds and its work in general, and to vote on all matters coming before the body for its action. Only no action involving the expenditure of money, or the election of trustees, shall be valid without the concurrence in majority opinion of a majority of the trustees.

The chief interest of the trustees has always been the care of the property of the Association, which includes invested funds, and the following buildings, with about thirty acres of land: a hotel, having rooms for two hundred guests, a stone library, a chapel, and seven cottages. The hotel is usually rented to a "proprietor," and the duties of the library and church are laid upon a minister, the earliest of whom, Mr. Chas. Ryder, was called the "Agent."

The Akin Free Library, consisting of about three thousand books, selected with uncommon wisdom by committees of ladies through about twenty-five years, was originally established by the ladies of the Hill, in the early eighties, through a popular fund. It has ever since been funded by the Akin Hall Association, who have also given it quarters, and care, in the Chapel known as Akin Hall. It will soon be moved into the stone Library, erected in 1898, but only finished in 1906, and it is reasonable to suppose that it will there have a wider scope and an increasing use.

The Library has been managed primarily for the use of "the Summer people," and the books have the excellence of their selection, as well as the proportion of certain kinds of books, determined by the preferences of the Summer residents. No adequate records are kept of the books used; so that it is impossible to give statistics of the specific utility of the library. But it occupies a real place in the community, and is drawn upon by families from every section of the population.

The fact that it was originally assembled by popular subscription, and only later sustained by the Akin endowment is a token of the exceptional latent interest in literature, and the passive culture, to which tribute has been paid in this study of the Quaker Hill population. It is fair to say, however, that such interest has been confined to a small group of the population, now fast disappearing.

There is a small corporation, formed for the purpose of holding and caring for the "Old Meeting House." It is known as Oblong Meeting House, Incorporated. To this corporation, consisting of three trustees, a self-perpetuating body, the Yearly Meeting of Friends\* handed over in 1902 the building and grounds known as the "Old Meeting House," at Site 28. This ancient building, erected in 1764, is probably the oldest edifice on the Hill, and is the embodiment of the religious and historical traditions of the community. These trustees attend to the repair of the Meeting House, which is maintained in exactly the condition in which it was used for over a century. No meeting of worship is held now in this building, the "monthly meeting" having been "laid down" in 1885. The building is, however, the center of frequent pilgrimages during the summer, by the visitors to the Hill and boarders, who delight in its quaint interior. It is used for occasional "sales" for the "benefit" of some public interest. Once a year at the

\* The "Hicksite or Unitarian body held possession of the Meeting House in 1828, and until the above action.

close of Quaker Hill Conference, it is the place of "Quaker Hill Day" exercises, at which addresses and papers are presented, in celebration and commemoration of the past history of the community.

The Hill has record of few revivals. Quaker ways preclude surprises, and revivals usually arise from new things. There was, however, during five years, 1892—1897, a religious awakening, prolonged month after month, for five years with undiminished force. The cause of it seems to have been the study of the Bible in the historic method; a new mode of awakening traditional religious interest. During that time the whole community was keenly alive, old and young; and in certain cases a change of life became permanent. In many young persons a definite religious impulse was the result.

This quickened religious interest involved all the Quaker influence, both Orthodox and Hicksite, and it was reinforced by several strong personalities from outside the Hill, persons trained in church work in New York and elsewhere. It crystallized in the organization of "Christ's Church, Quaker Hill," in the Spring of 1895, which received at the beginning adherents of all the religious groups represented on the Hill. Within three years it had grown to a membership of sixty-five, among whom were members or adherents of the following religious bodies, Protestant Episcopal Church, Anglican and Roman Catholic Churches, Quakers, Hicksite and Orthodox, Presbyterian, Baptist, Methodist Episcopal, Congregational, Disciples and Lutheran.

This church is served by the minister employed in Akin Hall, and it has therefore a peculiar place. Its membership is drawn from the population resident on the Hill. Its doctrinal truths are simple, namely the Apostles' Creed. Its ordinances are elastic, baptism being waived in the case of those who, being trained as Quakers, do not believe in water baptism; and by the conditions affixed to Mr. Akin's endow-

ment, that no denominational use should ever be made of Akin Hall, it is without sectarian connections.

The religious services in Akin Hall have in Summer been attended since 1880 by numbers of "summer people," from Mizzen-Top Hotel and the boarding-houses. A Sunday School was maintained from 1890 to 1905, a Christian Endeavor Society from 1894 to 1903. Both have been discontinued, owing to lack of members.

The church has also a diminished membership, especially since 1903, owing in part to mere removal of population; and even more to the death and removal from the Hill of persons of forceful, aggressive type, and the impoverishment of the population in respect of initiative and coherence.

The other agency carried on under the patronage of Akin Hall Association is the Quaker Hill Conference. Founded in 1899 by Mr. Akin, entertained by Miss Monahan, this assembly has made September of each year a focal point in local interest. For five days of public meetings, Bible study, addresses upon religion, social and economic topics, culminating in a great dinner, of which four hundred partake, it is the modern successor of the now extinct Quaker Quarterly meetings. It expended in 1907 about \$1,400, of which about half was contributed by Akin Hall Association, and the remainder by individuals.

The groups in which the women of the Hill are associated are of great interest. The Roman Catholic women have only their kinship associations, and no voluntary associations, being generally in the employ of Protestants, and having their church center away from the Hill in Pawling village.

The King's Daughters is the largest association, and most representative of the Hill, both in its numbers, frequency of meetings and variety of interests; though it is not the oldest. It has a membership of forty, and is actively devotional, charitable and benevolent. It serves also a useful purpose in pro-

viding social meetings, bazaars, sales and other occasions throughout the year which bring neighbors together; and uses their assembling for the assisting of the poor, ignorant or needy.

This society, as well as the one to be mentioned next, exemplifies the real democracy in which the women of the Hill meet and plan for common local interests; a fine spirit and practical efficiency characterizing their meetings, and each woman, however, humble, having a part with the best in the general result.

The Wayside Path Association is smaller in number of members, as well as older than the King's Daughters; indeed, it has perhaps no fixed membership, but is an assembling of the women of the place about a small group as a working center for a yearly duty. Its purpose is to maintain a dirt sidewalk, over three miles in length, which follows the road northward and southward, from the Glen to the Post Office, with branches. Once a year the Association meets, gathers funds by a "sale" or by subscription, hires a laborer to repair the Wayside Path; then for a year lies dormant. In 1898 there was a general effort made to transform this association into a general Village Improvement Society, with diversified interests, into which men would come, but it failed, and no such society exists.

The West Mountain Mission is an association of ladies of the Hill, who through sales and bazaars, supplemented by gifts, contribute to the support of a chapel of the Protestant Episcopal Church, two miles west of Pawling. This association draws its membership from the hotel guests and from residents in the cottages; and but little from the essential Quaker Hill households.

The same may be said of whist clubs maintained in the summer at the hotel and cottages.

## CHAPTER VII.

### THE SOCIAL WELFARE.

Quaker Hill is an example of the working of a religious and economic system toward its inevitable results in social welfare. The results consciously sought were mainly personal. They were not seeking culture or security or equity, and not attempting to create a community, those early Quakers; but they sought with all their heart and mind after prosperity, individual and communal; after vitality, morality and that self-expression which is in the form of self-sacrifice or altruism in "the service of others." The conscious mind of the Quaker fathers of this community was other-worldly, except in the matters of business—of which more later. That "spiritual" state of mind was intensely individual. All the interests it regarded were of the self, conceived as an inner, immaterial duplicate of the body, destined for heaven after death, and now enjoying interchanges of experience, especially of emotion and intelligence, with the Deity, during life.

It was a mind consciously framed to serve personal development, with no thought of public or common interests. Yet subconsciously the Quaker was acutely aware of common interests. A Quaker frequently uses the expression "I feel myself in unity with them." Their doctrine of the indwelling of the divine in every man made them quick to feel common emotion. Their group-sympathy was lively and strong. They felt the community, though they never thought upon it. Subconsciously, though not consciously, they were public-spirited. They acted upon a fine social spirit, though they taught no social gospel.

"The supreme result of efficient organization,"\* says Pro-

\* Descriptive and Historical Sociology, p. 541.

fessor F. H. Giddings, "and the supreme test of efficiency is the development of the personality of the social man. If the man himself becomes less social, less rational, less manly; if he falls from the highest type, which seeks self-realization through a critical intelligence and emotional control, to one of those lower types which manifest only the primitive virtues of power; if he becomes unsocial, the social organization, whatever its apparent merits, is failing to achieve its supreme object. If, on the contrary, the man is becoming ever better as a human being, more rational, more sympathetic, with an ever broadening consciousness of kind, then, whatever its apparent defects, the social organization is sound and efficient." Let us consider whether Quaker Hill has met this test. It has been well organized. It has had definite purposes. What has been the type of welfare enjoyed as a result? What kind of man has emerged from almost two centuries of cultivation of a religious and economic ideal?

In economic operations the Quakers dwelt in this world. They sought a living and they sought wealth—not for the services wealth can render in culture and education, but to accumulate it, possess it, invest and manage it, and to live "in plainness."

Yet they subconsciously did also seek after a prosperity that should be general. Not closely, not in any declarations or definite teachings of their code, but still in a real way, as a by-product of their code of life, they acted so that none in their community should be in want. This they did with profound wisdom—for they taught no communal doctrine—and the details of their action toward weaker members of the neighborhood were uncommonly shrewd and sensible. I will show later the effects of this in the fact that the population under our study shows the absence of defective classes in a significant degree. There are no idiots, no defective, no criminal, no pauper classes among the Quaker Hill population. ↵

The mind of the community had, indeed, an active interest in liberty and the contribution noted above (see Ch. IV. Part I) in the agitation for the abolition of slavery in this state was an act of public spirit along the lines of a great national experience. The fact that the meeting of Friends in 1767 was held on Quaker Hill, which initiated effective action against slaveholding, is much cherished on the Hill, and is commemorated in a stone and bronze memorial at the Meeting House.

Equality of suffrage and universal suffrage are jealously believed in, owing to the Quaker teaching as to woman's parity with man. Yet in the school-meeting, in which women have the same right to vote that men have, there are seldom any women present. Indeed, except for a packed meeting once in a decade, to decide some agitated question, few men attend school-meetings.

The size of the holdings of land on the Hill, and the curve of increase and decrease for seventy years, are exhibited in Table II.

TABLE II.

*Land-Holdings on Quaker Hill: Acreages on which Owners are taxed.*

Years . . . . .	1835	1845	1865	1875	1890	1900	1906
No. Owners . . . . .	31	26	39	51	48	53	42
Highest Acreage	610	540	445	420	540	540	540
Higher Quartile	378	260	225	225	183.5	222.5	265
Average . . . . .	222	206	150.5	147.8	137.8	154	184.2
Median . . . . .	187	150	131	120	104	120	155.5
Lower Quartile	80	100	59	52	43.5	57	90
Lowest Acreage	1	42	3	6	5	1	6

The above table gives in a graphic manner the tendency of wealth to increase, on the Hill, so far as wealth is represented in land. It is to be noted that these figures, taken from

the Tax-Lists of the town of Pawling, are not precisely accurate, especially in the lower ranges. There is an evident inaccuracy in the reporting of the smaller places. Yet from them the following may be inferred: First, that from the beginning of the reports, which was about the end of the period of the Quaker Community, there was a shrinkage in the size of the land-holdings on the Hill; and from the beginning of the period of the Mixed Community a rise in the general averages. the lowest of the curve is about 1890, in the Median, the average and in each of the quartiles. Second, the incoming of the Irish immigrants, who began to be land-holders about 1850, multiplied the number of small holdings of land.

Just what cause has operated in the years 1890-1906 to increase the size of the holdings of land it is hard to say, unless it be the expectation that land would have a value, which is aroused by the presence on the Hill every summer of visitors to a number equal to the numbers of the resident population. It is evident at the present time, when the "milk business" has been reduced to half in the past five years, that the farmers are holding their lands with a hope of selling.

It is worthy of remark that the tax-list of the town furnish no other data of reliable value, or even of suggestion, being obviously inaccurate and uneven in their reports of the values of land, and of the holdings of personal property.

The fact that is not recorded in the above statistics is this: that certain owners, associated in close family ties, own all the land of greatest value. Seven family groups possess, in the names of eleven of the above owners, all the land near the Hotel, all the land for which any one has ever thought of charging more than fifty dollars an acre. These eleven owners of all the land of greatest value possess probably nine-tenths of the personal property.

Holdings of property on Quaker Hill are very unequal. The smallest owner of real estate has an acre, and the largest

about six hundred acres. Contrasts here are sharp and permanent. The same families have possessed certain properties for many decades, often for two centuries; and generally Quaker Hill families do not sell till they all die or move away.

Wealth is increasing on Quaker Hill in the slow course of years, and probably along the lines of present growth, will increase. It is distributed with marked inequality. The tendency, especially in central territory, is toward increasing inequality. There is "a small group at a high degree."

Yet the community is generally prosperous and well-to-do. There are none poor. Indeed, the wealthy women who began to come to Mizzen-Top Hotel in 1880, looking about for some poor to assist, were obliged to go off the Hill to the south, and lay hold of a lonely female with a curious nervous malady but self-respecting withal, and deliberately pauperize her. To this process, after some initial struggles, she has submitted through these intervening years. She has now for years been pensioned by the church in Akin Hall through the year, visited in summer by people in carriages, has maintained an extensive begging correspondence through the mails all winter, and has been generally despised by her neighbors. But she has represented to interested clergymen and charity workers on their summer vacations the fascinating and mysterious problem of poverty.\*

Very few indeed have been the defectives. I know of none in ten years. The prevailing vitality of the community is high. There were living two years ago five persons past ninety; and one of them died in his hundredth year. Octogenarians drive the roads every day, and manage their estates with ripe discretion and unabated interest in affairs. The religious revival referred to (see Chapter VI) brought into the church an active man of great wealth of ninety-five years of age.

There are no blind persons. One old man, who suffered

\* S. P. died 1906.

from cataract, lost an eye in an operation at eighty-five years of age; and refused to submit the other eye-ball to the surgeon. There are no deaf and dumb.

People on Quaker Hill are well-born. I suppose this may be in part due to the high morality of their fathers. I attribute it, in view of the contrast in this respect to the contiguous population in Sherman, Conn., to the highly organic communal life of Quaker Hill. Connecticut people, some of them of the same original Quaker stock, have settled on small holdings of lands, and held them till isolation and poverty have driven them to suicide, insanity or other miseries. Quaker Hill was from the beginning differentiated into a healthier diversity, and it has been the better for her people.

There are few mentally abnormal persons in the community. One may designate three persons as unbalanced, two of them unmarried women; and another such as probably insane, though residing at home. But even the aged do not die first in the head. There are no idiotic persons.

The prevailing morality is high. Very few would be classified as immoral, by the public disapproval of their conduct. Individuals have committed theft, or an act of cruelty, or adultery, in the years 1895-1905. They do not constitute classes.

The sociality of Quaker Hill seems to the writer relatively high. Response to a case of real need is prompt, wise and abundant; and common action for others is heartily begun and completed. There are no unsocialized persons; neither paupers, criminals, nor degraded, in the community; at least no class or classes of such. There is a man who perhaps drinks too much and too often; but even he is too far from the saloon to attain to the dignity of neighborhood drunkard.

Quaker Hill has not been of a mind to contribute institutions or resources to the public. Toward war hostile, toward

the state always impassive, sometimes actively disloyal in times of war, Quaker Hill has lived a life apart.

Common school privileges are offered to all in the three school houses at Sites 12, 43 and 101 (school districts No. 1, 3, 4) and the advantages offered are generally studiously appropriated by the young. In the ten years under study two families alone have been unwilling to take full advantage of the school opportunities.

In the school at Site 43, for which alone an improved, modern building has been erected, there was, beginning in 1893, a determined effort made to provide a school better than the ordinary country school. By the co-operation of certain farmers with children in school, and through contributions of citizens of means who had no children, better teachers were employed, at increased expense, for the space of twelve years. During two years the school was graded, employing two teachers. But the effort in this direction seems to have ceased with the close of the year 1905-1906. This school has had, for the years 1904-6, only one Protestant child, in an enrollment of twenty to thirty.

The other school-districts are maintained "in the old back-country way," their attendance is small and no effort is made to raise the standard of teaching.

It has been accepted for generations among the authoritative leaders on Quaker Hill that "higher education was not good for the poor." Of this doctrine, Albert Akin, generally progressive, was a firm believer. He insisted, and other representatives of the leading families have done the same, that "to offer them higher education only makes them discontented"; "they won't work if you get them to studying—and somebody must do the work."

It seems in strict harmony with this opinion, which I never heard opposed on the Hill, that Quaker Hill has never until 1904 sent a young man or woman through the college or uni-

versity. Albert J. Akin, 2d, was a member of class of 1904 of Columbia University, but he was not born on the Hill, and never long resided there. Indeed, the town of Pawling has not another college graduate among its sons. There have, been, however, a few who have gone to school to the grade of high school and no normal schools. In the past ten years ten young men and women have done so. One youth all but completed a college course in 1906. Two young women are just completing courses as nurses.

Personality is the field in which the conscious purpose cherished on Quaker Hill would have wrought its best efforts. But personality was always on Quaker Hill inhibited, restrained and schooled into mediocrity. Variation was repressed. Spontaneity was forbidden. Ingenuous spirits were firmly and effectively directed into channels believed to be harmless.

The result has been that mediocre people have both lived on the Hill, and gone away from it, in voluntary exile from its beautiful scenes, but not in exile from its spirit of plainness. No person of brilliant mind or of uncommon talents has ever come of the Quaker Hill population. There is not among the sons or daughters of this place one whose name is of lasting interest to any beyond the limits of Pawling. No artist or poet has ever ventured to express the intense feeling of the aesthetic which pervades the place, but has always been hushed from singing, restrained from picturing.

I think the end for which the Quaker Hill population have lived could be called Individual-Social. They are consciously individual, and unconsciously, inevitably social. These people have sought generation after generation for personal salvation and personal gain. "And that," says a resident, "that is why the place is dying." Yet the common interest was a logical corollary of the Quaker doctrine of God in every man, and therefore a community was formed, a community indeed which was no one's conscious care. In the chapter upon

"The Common Mind," above, I have showed that all the leaders of the community as a whole, save one, have been outsiders, who came to see the integrity of the community with eyes of "the world's people," and these leaders in communal service have been grudgingly followed.

That one, Albert J. Akin, who founded Akin Hall Association, lived away from Quaker Hill, in New York City, the most of the months of fifty years, 1830-1880, and fell under the influence of outsiders.\*

Indeed, a rare beauty characterizes these children of the old Quaker Community; and a fine harmony blends the members of the Mixed Community into one another. The type of country gentleman and lady was perfectly embodied in James

\* An analysis of the sources of Mr. Akin's leadership, written for the Memorial Service after his death in 1903, is of interest here, as showing the influence of persons upon him who were not of Quaker Hill ancestry or of Quaker breeding:

"In all the years he lived on the Hill he had to do with every movement and was in touch with every person on the Hill. He made himself a party to every public interest. When the building of the Hotel was suggested, he put himself at the head of the movement, invested the most money in it, and later obtaining entire control, deeded it to his Akin Hall foundation. When the library enterprise was broached, which has grown into Akin Free Library, he organized and incorporated the institution required, endowed it generously; later reorganized it, upon legal advice; thus accepting ideas from Admiral Worden, William B. Wheeler, Cyrus Swan, Judge Barnard, and others of his neighbors, and contributing his own patient and unflagging executive faculty. When it was thought best, in 1892, to continue the church services throughout the winter under the leadership of Mrs. Wheeler and of Miss Monohan, and the growth of the Sunday school and permanent congregation seemed to require the employment of a resident pastor, Mr. Akin acquiesced; at first as a follower, but steadily and increasingly as a leader, he identified himself more and more every year until his death, with the religious life of Akin Hall and Christ's Church. He was a good leader, for he confessed himself a follower in the enterprise which he was in a position absolutely to control. He eagerly availed himself of the suggestions of others, took a quiet and lowly place with entire dignity, and exerted without arbitrariness a determining influence.

"When Mr. Akin was about sixty years of age, he bought a residence in New York, and went there to live in the winters. He had as a neighbor a Quaker preacher named Wright, who was accustomed to come to Oblong Meeting in the course of the year. With him Mr. Akin had many conversations on matters of duty and worship.

"He began also to attend the Oblong Meeting in the summer, though the Sunday meetings were not at that time largely attended.

"Later when his residence was at Fifty-sixth Street he became the fast friend and devoted admirer of Dr. John Hall, who used often to call upon him. For years Mr. Akin was carried into Dr. Hall's Church; but after Dr. Hall died, and even before, he had ceased from that custom.

"The growth of the church on Quaker Hill, under the leadership of Mr. and Mrs. William B. Wheeler and Miss Margaret B. Monahan took strong hold on Mr. Akin's heart, and exerted over no one a more vital influence than on this old man."  
—Albert J. Akin—A Tribute, by Rev. Warren H. Wilson, Quaker Hill Conference, 1903.

J. Vanderburgh, who died about 1889, in his residence at Site 30. He was a good man, hospitable, large-minded, well read, humane; he was sufficiently reverent to be good neighbor to the Orthodox; and he was sufficiently wealthy to express the Quaker economic ideal. He had the Quaker genius of thrift expressing itself in bounty.

Mrs. Zayde Akin Bancroft, resident at Site 32, who died in 1896, was an example of the ideal Quaker Hill lady. A woman of leisure and culture, accustomed to the possession of wealth, and enjoying it in books and travel, she surrounded herself for several of her last years with an atmosphere, and secured for herself enjoyment, of the highest aspirations of the Quaker Hill economic ideal.

No one quite so much embodied that ideal as Albert J. Akin, who died in his hundredth year, in January, 1903. His fortune, which amounted at his death to more than two million dollars, was the culmination of the wealth of his family, acquired since his great-great-grandfather, David Akin, the pioneer, came to Quaker Hill about 1730. He was a far-seeing and brilliant investor, and through his long business life, which lasted until 1901, he followed the growth of railroads in the United States with steady optimism, and almost unvarying profit. After the year 1880 he came to live on Quaker Hill, in the interest of his health, more constantly than he had in the preceding fifty years. He at once interested himself in local enterprises, and Akin Hall Association and Mizzen-Top Hotel were at that time founded by him and others. Until his death, twenty-three years later, he was the leading citizen and the most interesting personality among this social population. Such was his place and so masterful as well as constructive his influence that it was a true expression of the feeling of all which one resident wrote at that time to another: "The king is dead, the man on whom we unconsciously leaned and whom none of us thought of disobeying,

though only his personality held us to allegiance, is gone from us. And I for one feel that I have lost a dear friend."

These three illustrations will serve to indicate both the kind of persons who have come of the Quaker Hill community, and one of its tendencies. They illustrate also the spirit of the community toward its leaders.

Personalities of the austere type, men and women of the devotional side of Quakerism, may be cited in the cases of \*David Irish and †Richard T. Osborn. The former was the last minister of the Hicksite Society of Friends on the Hill. His preaching covered the years of its separate existence, for he was made a minister in 1831, three years after the Division, and he died in 1884, at the age of ninety-two. One year after his death the Meeting was formally "laid down," in Oblong Meeting House, and from a place of worship it became a house of memories.

David Irish was austere. Believing that slavery was wrong, "he made his protest against slavery by abstaining, so far as possible, from the use of slave-products . . . made maple to take the place of cane sugar, and used nothing but linen and woolen clothing (largely home-spun). This abstaining he continued for himself and family until slavery was abolished." Yet "he never felt free," continues his daughter and biographer, "to join with anti-slavery societies outside his own, believing that by so doing he might compromise some of his testimonies." He welcomed in his home the fugitive slave fleeing from the South, and "there must never be any distinction made in the family on account of his color; he sat at the same table and was treated as an equal."

David Irish was equally opposed to war, and to capital

\* David Irish—A Memoir, by Mrs. Phoebe T. Wanzer, Quaker Hill Conference, 1902.

† Richard Osborn—A Reminiscence, by Margaret B. Monahan, Quaker Hill Conference, 1902.

punishment. He wrote, "testified" and "suffered" for these principles. "In the time of the Civil War he allowed his cattle to be sold by the tax-collector, not feeling free to pay the direct war-tax." His biographer enumerates further his hospitality, his fondness for books, his humor, and mentions with a pride characteristic of the Quaker that he "was often entrusted with the settlement of estates, showing the esteem in which his business capacity and integrity were held by the community."

Richard T. Osborn was the Elder of the Orthodox branch of the Friends during the same period, subsequent to the Division, as that covered by David Irish's life. Born in 1816, he was conversant as a child with the period of the Division. The seceding members of the Meeting met in his father's house and barn until the Orthodox Meeting House could be erected on the land upon which, at his marriage in 1842, he erected his house. Richard Osborn was "the head of his family." Strong of will, austere, convinced, he lived in the world of Robert Barclay and William Penn, and for years never hesitated to rebuke young or old Quakers or "world's people," whom he found violating "the principles of truth." A summer boarder who played a violin upon his premises was silenced, and the singing of a hymn in the Meeting House of which he was Clerk was once sternly "testified against."

But Richard Osborn was kindly. He had a gentle and appreciative humor; and about 1890 there come influences in the presence of neighbors to whom he was strongly drawn, as well as the constant presence in his house of boarders from New York; so that his later years were spent in a mellower interest in dogma, and an ever keener interest in the history of Quakerism and of the community in which he lived. His wife, Roby, was a Quakeress of rare sweetness and exquisite gentleness of character. Together this strong, dominating man and his gentle wife constituted an influence, while they

lived, which held the community together, and disseminated their principles more successfully than if he had been eloquent, instead of terse, and she an evangelist instead of a meek and demure Quakeress.

These persons were conspicuous examples of the best social product of Quaker Hill. They were not famous, nor great. Their philosophy was one of self-repression and required them to reduce their lives and those of other men to mediocrity. Quaker Hill taught and practiced the prevention of pauperism—and the prevention of genius! The ideals of the place discouraged higher education. The leading personages distinctly opposed the offer of higher education to the young.

Therefore this community, which has been exceptionally wealthy for one hundred and fifty years, has done nothing for general education; and has not educated its own sons. As noted above, no person born on Quaker Hill ever completed the courses for a degree in college or university, and though the community has had for a century families with aesthetic and literary tastes, no member of the community has painted a picture, written a song, or published a book.

The personages briefly described above are named for another reason. Their deaths, with the deaths of certain others whom they represent, have brought to an end the period of Quaker Hill's history which I have called "The Mixed Community." The others who with them made up this group were Jedediah and Phoebe Irish Wanzer, Anne Hayes, Olive Toffey Worden, and six other persons still living, of whom four are past eighty years and two are very near one hundred years of age. This group of persons were the center of that Mixed Community. They possessed the actual authority which this population always has required in its leaders. The piety, the austerity, the forcefulness, the ownership of the land of greatest value, and even the available wealth of the community, were so largely possessed by this group that in the years

1890-1900, in which this group was still intact, its leadership was such as to unite the community and consolidate the whole population for whatever interests the leaders of this group approved. Of that period it was said: "Everybody on Quaker Hill goes to everything!"

With the death of those who have passed away in the latter part of the period under study the power of initiative has gone. New proposals are hushed. Variation is discouraged; the rut of custom and convention is preferred. And a subtle stifling air of the impossibility of all active purposes pervades social and religious and business activity on the Hill.

Religiously speaking, attendance upon public services have decreased by twenty per cent., while the Protestant population has only decreased five per cent.

In business activity reference is made above to the fact that the number of milk dairies has decreased from eighteen to nine, a decrease of fifty per cent. At the same time the largest dairy on the Hill which in the decade 1890-1900 "was milking one hundred cows," has for the years 1903-1907 "made milk" from only forty and fifty cows, although the owner has more land than his predecessor.

The population which now remains on Quaker Hill contains only a few persons of force and leadership, and they are no longer so grouped as to command. The majority have no ability to follow unless authority be an element in the leadership; and authority to command the whole community has not existed since 1903. "The king is dead."

## Part IV.

### Appendices: Original Family and Church Records.

#### APPENDIX A.

A List of the Heads of Families in the Verge of our Monthly Meeting held on the Oblong and in the Nine-Partners Circularly taken in the 3 mo. 1760. (This date should be 1761. The Monthly Meeting directed the list to be made 4, 16, 1761.\*)

1st	At New Milford	Stephen Hoag and Wife
Dobson Wheeler and his Wife		James Hunt and Wife
Aaron Benedick and his Wife		Prince Howland and Wife
Joseph Ferriss		Isaac Haviland and Wife
Gaius Talcott		Nathn. Birdsall and Wife
James McKenney		Nathn. Birdsall, Jun. and Wife
Lydia Norton		Daniel Chase and Wife
Anna Philips		Edward Wing and Wife
		Abraham Wing and Wife
2d	At Oblong	Israel Howland and Wife
John Bull and his Wife		David Akin and Wife
Wing Kelley and his Wife		Jonathan Akin and Wife
Oliver Tyron and his Wife		Joseph Jinnins and Wife
John Wing and his Wife		Robert Whitley and Wife
John Hoag ye 2d and Wife		Nathanael Stevenson
Benjam Hoag and his Wife		Joseph Hoag
Abner Hoag and Wife		Abraham Thomas
Philip Allen and Wife		Isaac Bull
Moses Hoag and Wife		Patience Akin
George Soule and Wife		Desire Chase
Wm. Russell and Wife		Mary Allen, Widdow
David Hoag and Wife		Mersey Fish
Ebenezer Peaslee and Wife		Margaret Akin
Nehemiah Merritt and Wife		Margery Woolman
Nehemiah Merritt Jur. and Wife		Dinan Gifford, Widdow
Elijah Doty and Wife		Elizab Hunt, Widdow
Henry Chase and Wife		Abigail Gifford
Abraham Chase and Wife		Phebe Boudy
Benjam Ferriss and Wife		Ann Hepbern
Timothy Dakin and Wife		Sarah Davis
Elisha Akin's Children		Ann Corban
Reed Ferriss and Wife		Hannah Birdsall
Zebulon Ferriss and Wife		
John Hoag, Senr. and Wife	3dly	At Nine Partners
John Hoag, Jur. and Wife		Peter Hallock and Wife
Jedidiah Wing and Wife		Moses Haight and Wife
Josiah Akin and Wife		Aaron Haight and Wife

\* Correction of date is by John Cox, Jr., the Librarian of the Yearly Meeting of the Society of Friends, 315 Rutherford Place; in whose charge is the original.

Joshua Haight and Wife  
 George Soule and Wife  
 William Palmer and Wife  
 Reuben Palmer and Wife  
 Nehemiah Reynolds and Wife  
 Peter Palmer and Wife  
 Aaron Vail and Wife  
 Joseph Haight and Wife  
 John Lapham and Wife  
 Jonathan Holmes and Wife  
 Jonathan Hoag and Wife  
 Israel Devil and his Wife  
 John Kees and Wife  
 Nathaniel Brown and Wife  
 Anthony Arnold and Wife  
 Caleb Norton and Wife  
 Micah Griffin and Wife  
 Jacob Haight and Wife  
 John Haight and Wife  
 Stephen Haight and Wife  
 Micah Palmer and Wife  
 Andrew White and Wife  
 Stephen Hicks and Wife  
 Daniel Tobias and Wife  
 Ezekiel Hoag and Wife  
 William Haight  
 Joseph Reynolds  
 Obadiah Griffin  
 Solomon Haight  
 Benjam White  
 John Hallock  
 David Arnold  
 Nathan Bull  
 Hannah Thorn  
 Hannah Tripp  
 Margaret Allen  
 Rose Barton  
 Sarah Collins  
 Bersheba Southerlin  
 Sarah Jacocks

Ruth Mabbit  
 Patience Green  
 4thly At Oswegoe  
 Samuel Dorland and Wife  
 Richard Smith and Wife  
 Joseph Smith and Wife  
 Samuel Hall and Wife  
 Allen Moore and Wife  
 John Thomas and Wife  
 Lot Tripp and Wife  
 Ebenezer Shearman and Wife  
 Joshua Sherman and Wife  
 Daniel Shepherd and Wife  
 John Thomas and Wife  
 Josiah Bull  
 Zebulon Hoxsie  
 Ichabod Bowerman  
 David Irish  
 Andrew Moore  
 Joseph Waters  
 Eliah Youmans  
 Othniel Allen  
 John Carman  
 Jesse Irish  
 Deborah Reed  
 Martha Gifford  
 Abigail Adams  
 Mary Moore  
 Catharine Leaven  
 Mary Youman  
 Mehetable Devil

5thly At Peach Ponds  
 Samuel Field and Wife  
 Elias Palmer and Wife  
 David Palmer and Wife  
 Samuel Coe and wife  
 Stephen Field and Wife  
 Solomon Field and Wife

Additional names which occur in the minutes of Oblong Meeting, in the years 1742-1780 (obviously an incomplete list of members):

Akin, Nathan Fields  
 Akin, James  
 Akin, Timothy  
 Birdsall, Timothy  
 Briggs, Zebedy  
 Brundige, Edward  
 Bunker, Annie

Chase, Johnan  
 Chase, Phynehas  
 Clement, James  
 Comstock, Thomas  
 Dakin, Preserved  
 Dickerson, Isaac  
 Dickerson, Henry

Mehitable Devil, Devill, Duvall or Deuell	Osborn, Paul
Franklin, Thomas	Osborn, Isaac
Falyer, Abraham	Peckham, Jos.
Haviland, Daniel	Sherman, Joshua
Haviland, Benjamin	Smith, Denten
Hoag, Enoch	Shove, Edward
Hoag, Samuel	Stedwell, Roger
Hall, Joseph	Sweet, Elnathan
Hunt, Josiah	Benony Sweet
Irish, Joseph	Taber, Jeremiah,
Irish, Jessee	married Delilah Russell
Jenkns, Volunteer	Wanzer, Moses
Lancaster, Aaron	Wing, William
Lester, Murray	Wing, Elisabeth
Laurelson, Aaron	Wing, Daniel
Mosher, Wm.	Whiteley, Pardon
Moore, Allen	Wood, Drusilla,
Norton, Robert	married Israel Howland of Purchase.

## APPENDIX B.

The following are the names of those who had accounts at the store of Daniel Merritt, on Quaker Hill, in 1771, as the names appear in his Ledger :

Akin, John, Esq.	Briggs, Jeremiah
Akin, David, Jr.	Briggs, Thomas, Senr.
Akin, Thomas	Briggs, Prince
Allen, Mary	Briggs, Thoms, Junr.
George's mother	Briggs, Anthony
Akin, James	Briggs, John
Akin, Josiah	Birdsall, Nathan
Akin, Elisha	Birdsall, Nathan, Junr.
Akin, Stephen	Birdsall, James
Akin, Jonathan	Birdsall, Thomas
Akin, Abraham	Birdsall, Benjamin
Akin, Timothy	Birdsall, Lemuel
Allen, Ephraim	Bennet, Benj., of Patent
Allen, Alexander	Brownson, Libe
Allen, Moses	Bostwick, Daniel.
Allen, Samuel	Boult, John, Senr.
Allen, Thomas	Barnum, Timothy
Allen, George	Benedic, Aron
Allen, Daniel	Bowdish, Nathaniel
Allen John, Elisha's son	Buck, Lydeal, Junr.
Allen, John Taylor	Bostwick, Daniel, Junr.
Allen, Elizabeth, widow	Brown, John
Allen, Mary	Bennet, Benjamin
Elisha's mother	Barnum, David
Allen, Mary	Buck, David
Elisha's daughter	Betts, William
Allen, Elisha	Birdsley, Johiel.
Allen, Sarah, George's wife	Beardsley, Josiah
Ashby, Anthony	Barnum, Zadoc
Arnold, Joseph	Burret, Daniel
Arle, Nath., II	Barley, Abigail
Ackley, David	Boult, John, Junr.
Arle, Rebecca	Billings, Increase
Andras, Thaddeus	Brush, Thos., Esq.
Alderman, Elisha	Bosworth, Nathanael
Arnold, Nathaniel	Beach, David
Briggs, Edward	Bump, Stephen
Briggs, Jeremiah	Bowdy, Nathanael
Briggs, William	Bennet, Henry
Briggs, Henry	Brush, Thomas, Junr.
Briggs, Elkanah	Beardsley, Nehemiah
Briggs, Phoebe, widow	Boorn, Sarah
Briggs, Zepheniah	Burdick, Ephraim
Briggs, Edward, Junr.	Brown, Joseph

Burtch, Nathanael  
 Bull, Abraham  
 Brownell, William  
 Barlow, David  
 Bass, Thomas  
 Burrett, Israel  
 Burtch, Increase  
 Birchard, Jonathan  
 Beers, James  
 Brayton, Gideon  
 Burdick, Nathan  
 Brady, William  
 Bostwick, Ichabod  
 Botheford, Joel  
 Bowdy, Moses, Junr.  
 Bennet, Richard  
 Bush, John Newfair  
 Bostwick, Amos  
 Benson, Benj.  
 Bull, Isaac, Junr.  
 Barley, Daniel  
 Brownson, Peter  
 Bennet, Amos  
 Birdsall, Lemuel  
 Brown, Wm., schoolmaster  
 Burdick, Jessee  
 Brownin, Benj.  
 Benedic, Abner  
 Bracket, John  
 Bull, Thomas  
 Butler, Nathanael  
 Butler, Truelove  
 Buck, John.  
 Bacon, Wm.  
 Bradshaw, James H.  
 Beardsley, Elihu  
 Brownen, Wm.  
 Batchford, Jonathan  
 Batchford, Joel  
 Brown, Wm. (Dover)  
 Buck, Isaac  
 Buck, Lydeal  
 Burten, Oliver  
 Bump, George  
 Bowdy, Moses, Junr.  
 Barnes, James  
 Burteh, Jonathan  
 Bennet, David  
 Beemus, Thomas  
 Brownson, Sarah

Burtch, Jonathan, 2nd  
 constable  
 Burtch, Isaiah  
 Bostwick, Robert  
 Burdick, Robert  
 Burdick, Ephraim  
 Bangs, John  
 Bruce, James  
 Chase, Daniel, Senr.  
 Chase, Daniel, Junr.  
 Calkin, Elijah  
 Close, Reuben, Senr.  
 Close, Reuben, Junr.  
 Church, Ebenezer  
 hat maker  
 Congo, Joseph  
 Chase, Henry  
 Chase, Benjamin  
 Corbin, Peter  
 Covell, Micajah  
 Cook, Thomas, laborer  
 Camp, Enos  
 Croch, Widow  
 Campbell, Archabel  
 Chase, Joseph  
 Chase, John  
 Chase, Nathan  
 Caswell, John  
 Clarke, Richard  
 Conger, Jessee  
 Conger, Joel  
 Campbell, Dunkin  
 Corbin, Sarah  
 Conger, Joel  
 Close, Gideon  
 Corbin, Thomas, Junr.  
 Cary, Rhoda  
 Chase, Benj., Junr.  
 Caswell, Reuben  
 Collins, Amos  
 Covell, Zacheus  
 Caswell, Amey  
 Carey, Lucy  
 Caswell, Robert, Senr.  
 Caswell, Robert, Junr.  
 Cary, Nathan  
 Cary, Rhoda  
 Crowfoot, Gideon  
 Covell, Seth  
 Chase, Stephen

Coller, Elisha  
 Calkin, David  
 Chase, Phinehas, Junr.  
 Curtis, John  
 Cook, Abial  
 Chamberlin, John  
 Chase, Elizabeth, widow  
 Cummins, Isaac  
 Calkin, John Doet, doctor  
 Canfield, Zarobabel  
 Crouch, William  
 Churchel, Joseph  
 Collins, Caleb  
 Calkin, Simon  
 Calkin, Nathaniel  
 Cary, Lemuel  
 Corbin, Thomas, Senr.  
 Corbin, Sarah, widow  
 Cummins, John  
 Caswell, Robert  
 Crane, Daniel  
 Caswell, Nathan  
 Coon, Matthew  
 Chase, Abner  
 Cummins, John  
     Ten Mile Hills  
 Calkin, James  
 Dakin, Thomas

## APPENDIX C.

### PACKAGE OF DEEDS OF OBLONG M. M. PROPERTIES.

Discovered 1906 by WILLIAM RYDER, of Brewster, N. Y.

#### DEED.

Zebulon Ferriss, of Oblong, to Benjamin Ferriss, David Akin, Ebenezer Peaslee, David Hoag, Joseph Irish, Nehemiah Merritt and Abraham Wing, all of Beekman's Precinct, Dutchess County, 5280 square feet, being 132 feet frontage on north side of road, and 40 feet deep, east of Zebulon Ferriss' acre lot. Consideration four (4) pounds. Dated, 4.16.1764. "Recorded in the First Book of Friends' Records for Dutchess County in the Province of New York, the 24th of ye 4th Mo. 1764, in Folio 89, 90."

#### DEED.

William Russell of Oblong, to same grantees, 40 square rods, being 5 rods frontage on north side of road, opposite Friends' old meeting house, and 8 rods deep. Consideration 8 pounds. (These two deeds seem to conflict as to direction and area.)

Recorded 4.24.1764 in same volume, page 87 and 88.

#### WARRANTY DEED.

Joseph Ferriss and Nathan Gaylor, both of Town of New Milford, Litchfield Co., Conn., to Dobson Wheeler, and Gaius Talcott of same town, Benjamin Ferriss, David Akins, Henry Chase, Timothy Dakins, George Soule, Abraham Wing, Reed Ferriss and Zebulon Ferriss, of York Government, land in New Milford "in the Common Field, by the side of the Great River at the south end of the Indian Field lots, a top of the hill East of the road, as goes to Danbury. "The Meeting House of the People called Quakers' Stands, on the said land. We had it of Benjamin Ferriss and David Noble the quantity to be seen on the records and it all the Land we are possessed of on the East Side of that Road bounded North and West on the road that goes to Danbury, East on the River." Dated July 6th, 1762.

#### CONSIDERATION RECEIVED.

Acknowledged before John Hitchcock, J. P. Recorded July 7, 1762, in New Milford, 9th Book of Records, page 667.

#### DEED.

Nicholas Wanzer of New Fairfield, Fairfield Co., Conn., to "the society of people called Quakers," one acre in New Milford, with Meeting House, etc. thereon. Consideration 2 pounds, 10 shillings. Dated 11.21.1788. Recorded in New Milford, 16th Book of Records, page 484. This does not seem to be the property described in above

deed of Joseph Ferriss, this being on the "west side of the Grate Rode that goes north and south through the plain."

Daniel Haviland of Southeast precinct, Dutchess County, to Joseph Irish, Edward Shove, Reed Ferriss and Wing Kelley, of Pawling's precinct and Elnathan Sweet and Joseph Lancaster, of Beekman's precinct and Benjamin Ferriss of New Milford, Conn., for the people called "Quakers," one acre and 70 rods, in South East precinct. Consideration, love of the Society. Dated 8.12.1782. Not recorded.

## DEED.

Roger Haviland, of New Fairfield, Conn., to same grantees, one acre and 30 rods in South East precinct. Consideration, love of the Society. Dated 8.12.1782. Not recorded. This would seem to join the property given by Daniel Haviland.

## DEED.

John Hoag, of Pawling's precinct, to Nathan Soule, Edward Shove and Thomas Haight, of Pawling's, 42 rods, on East Side of the highway in north end of Lot 38 of the Oblong. Consideration, love of the Society. Dated, 2.12.1784. Recorded in Oblong M. M. minutes for 2nd month, 1784.

## DEED.

Isaiah Hoag, of Pawling's precinct to Nathan Soule, Edward Shove, Abner Hoag, Thomas Haight, Azariah Howland and Isaac Osborn, of Pawling's precinct, 1½ acres in Pawling's precinct, for pasturing Friends' horses, etc. Consideration 10 pounds. Dated 7.30.1786. Not recorded. (Branch Meeting House.)

## DEED.

Daniel Wing, of Pawling's precinct, to same grantees as above, 45 rods, for building a meeting house, etc. Consideration 5 pounds. Dated 9.18.1786. Not recorded. (Branch Meeting House.)

## DEED.

Abner Hoag of Town of Dover, Dutchess Co., to M. M. of Oblong, 27 rods, adjoining the meeting house lot, "now called Branch Meeting." Consideration \$7.50. Dated 5.21.1811. Not recorded.

List of Deeds belonging to Oblong M. M. 5th Mo., 1788.

## VITA.

The author of this dissertation was born May 1, 1867. He received from Oberlin College the degree of A.B. in 1890, and that of A.M. in 1894. He graduated from Union Theological Seminary in 1894, and has since served as an active pastor at Quaker Hill and in Brooklyn, New York. While in the Seminary and also during the years 1903-1905 he was a graduate student in Columbia University, having especial interest in the lectures of Professor Franklin H. Giddings; to whom as to his associates on the Faculty of Political Science, he owes a debt of gratitude for a conception of the common life of men on the earth.
